

**THE VERIZON TELEPHONE COMPANIES**

**TARIFF F.C.C. Nos. 1 and 11**

**INTRODUCTION OF COORDINATED RETERMINATION  
NONRECURRING CHARGE**

**DESCRIPTION**

**Transmittal No. 422**

**March 12, 2004**

## **SERVICE DESCRIPTION**

The Coordinated Retermination Nonrecurring Charge provides a new option to customers who are moving the primary circuit termination of an existing 1.544 Mbps/DS1 High Capacity Service, 44.736 Mbps/DS3 High Capacity Service (excluding Short-Term DS3), or an existing Facilities Management Service from one Verizon wire center to another Verizon wire center.

With this option, the customer pays a Coordinated Retermination Nonrecurring Charge in lieu of treating the service as a disconnection and new service order. Monthly rates applicable to the circuit being moved continue to apply as if there is no disruption in service. Minimum period requirements do not change. Termination liabilities will not apply except where the retermination eliminates chargeable service such as interoffice mileage or primary premises channel terminations for which specific termination liabilities exist.

Verizon will work with the customer on a project basis to coordinate network activities and will provide the customer with a scheduled cutover date and time, minimizing downtime on the circuit which would otherwise negatively impact the customer.

## **REASON FOR THIS FILING**

With the introduction of this NRC, Verizon will be able to recover costs associated with the additional work requested by customers in order to coordinate a retermination of a channel termination from one wire center to another. The introduction of the Coordinated Retermination Charge also meets customer needs by providing them with a new option to coordinate the work activities associated with a move.
