ACCESS SERVICE

17. Advanced Data Applications (Cont'd)17.3 Asymmetrical Digital Subscriber Line (ADSL) Service (Cont'd)17.3.2 Service Description (Cont'd)

ADSL Service consists of ADSL Channels, which connect a customer designated premises to the DSL Service Node; DSL Interface Access Service (as described in Section 17.4), which allows the aggregation of traffic from multiple ADSL Channels onto the same facility; and Permanent Virtual Circuits (PVCs), which define logical connections between ADSL Channels and DSL Interface Access Service. While the Telephone Company envisions that ADSL Channels and PVCs will generally be purchased by end users and DSL Interface Access Service will generally be purchased by Internet Service Providers (ISPs), there is no restriction as to what type of customer may order the various rate elements. Use of the terms "end user customer" to mean the customer purchasing the ADSL Channel and "ISP customer" to mean the customer purchasing the DSL Interface Access Service are meant only to clarify rate relationships and are not meant to limit customer choices.

When a service is ordered under a term payment plan, the regulations in Section 17.3.8 will apply to the discontinuation of such service.

17.3.3 ADSL Channel

The ADSL Channel is provisioned over existing Telephone Company copper facilities and transported to the Telephone Company's backbone network. The ADSL Channel provides a connection from the CDP to the DSL Service Node.

The rates and charges for the ADSL Channel are in addition to basic local exchange service. A customer who obtains local exchange service from the Telephone Company's local or general exchange tariff may obtain ADSL Channel service utilizing the same copper facilities as the basic local exchange service. When it is not feasible to utilize the same copper facilities for basic local service and the ADSL Channel, the Telephone Company may provision the ADSL Channel using any suitable copper facilities.

(N)
(N)
(N)

ADSL service is not dependent on the grade of local exchange service, i.e. any package of ADSL service may be ordered by either residential or business local subscribers.
