

THE VERIZON TELEPHONE COMPANIES
TARIFF FCC NO. 1

Incidental InterLATA Call Management Signaling Service

TRANSMITTAL DESCRIPTION

Transmittal No. 518
December 3, 2004

Introduction

The Verizon Telephone Companies (Verizon) are submitting tariff pages to introduce Incidental InterLATA Call Management Signaling Service into Tariff FCC No. 1. This service provides a customer with terminating detail information and with the capability to provide instructions back to the Telephone Company regarding the forwarding or other disposition of calls terminating or attempting to terminate at the customer's end user's telephone number. This service utilizes Advanced Intelligent Network (AIN) capability in end offices from which the features are provided. In order to access these features, the customer will be required to have computer server equipment to exchange data in XML format over the Internet, to obtain a secure connection to the Internet from the customer's location and to comply with the Telephone Company's security and data exchange requirements.

The customer subscribing to Incidental InterLATA Call Management Signaling Service will be billed for each terminating detail signal initiated by the Verizon ISCP. A minimum number of terminating detail signals apply per month as described in the attached tariff pages.

Whenever a call attempts to terminate at a Telephone Company end office to a customer's end user's telephone line provisioned with the Service, Verizon will provide the customer with signaling information describing the attempted call termination and terminating detail for the call (collectively "Terminating Detail"). In every instance that a customer is provided with Terminating Detail for a call, the customer will be required to respond with a valid response ("Response"), within 18 seconds. Valid Responses include an instruction for Verizon to forward the call to a different domestic telephone number, to block the call or to permit the call to terminate to the customer's end user's line.

In the event no response is received within 18 seconds, the Telephone Company will proceed with terminating the call to the customer's end user's line.

Incidental InterLATA Call Management Signaling Service will be activated on a per-line basis for each line identified by the customer. Before the service will be activated on a particular line, the customer must instruct its end user to provide the Telephone Company with authorization for the customer to receive the end user's Call Management information. End users must provide this authorization by accessing the Verizon Telephone Company's Internet web site. The Telephone Company will reject a customer's request for Call Management Signaling Service if authorization from the end user has not been provided prior to receipt of an order.
