VOICE

Local Service

NewSouth Communications' Lucent 5ESS AnyMedia™ digital switches enable us to provide you with the best quality service at the best price.

PBX Trunks

NewSouth Communications offers comprehensive service designed to complement your existing PBX or Hybrid Key system.

Business Exchange Lines

NewSouth Communications' Business Exchange Lines enable you to customize the features and functionality of your telephone.

Extended NewArea

If your business places a large number of calls beyond our expanded local calling area, then Extended NewArea™ is designed for you.

Point-to-Point

NewSouth Communications' Point-to-Point functions as a private line between two or more locations. Your business can have continuous access to 4-digit dialing and high-speed data transfer to those locations you call most often.

Long Distance Service

Whether you're calling across the world or across your state, NewSouth Communications has the right long distance solution for your business.

International Long Distance

NewSouth Communications offers international calling to over 240 countries. Unlike other telecommunications providers, NewSouth Communications aggregates your monthly recurring charges.

800 Access

800 service is an easy and convenient way for your customers to contact you...at no charge to them.

Account Codes

NewSouth Communications' customers can track local and long distance calls by caller, department or client using our advanced Account Code system.

Small Business Solutions

Small Business Solutions enables businesses with as few as two lines to enjoy the savings of a competitive telecommunications provider. Your small business will enjoy savings of 15-20% off your current BellSouth services. Finally, small businesses have a choice.

Voice Mail

NewMessaging™ provides customers a flexible and powerful tool that can answer phone calls, take messages, and store them for review at a later time.

Conference Calling

Harness the power of the conference call for employees, customers and vendors with NewConferencing™ from NewSouth Communications. This service lets you organize a conference call between three or 300 people quickly and easily.

Phone Cards

When you are away from the office, our Phone Card puts all the benefits of NewSouth Communications right in your pocket. Calls can be made from almost anywhere to just about everywhere in the world.

Enhanced Features

Expand your communication capabilities with our suite of advanced voice features. These include an Individualized Dialing Plan, Multi-way Calling, Queuing, and Customer Recovery options.

INTERNET & DATA

Managed Network Security

NewSouth Communications is leading the industry with LANLock, a managed Internet security product that brings the latest in small-business network protection to your small business.

High-Speed Internet

NewSouth.net, our high-speed Internet product, brings you the World Wide Web with the touch of a button. Your connection is fast and it's secure - the bandwidth you purchase is guaranteed.

Private Networking

Netosphere, can provide your business with a comprehensive, custom-designed private networking solution for high-speed business communications. With a flexible, cost-effective private network, you will mobilize your business by sharing information and applications between sites.

BUNDLES

Suite T

A T1 made to order for your business. You choose the combination of Internet and voice channels, all with the convenience of one flat rate month after month.

Small Business Solutions

FAQs

What is high-speed access?

As a comparison, typical dial-up speeds are in the range of 28.8 kbps or 56kbps. High-speed access, therefore is a timesaving tool that allow you to work faster while you are using the Internet.

What is Internet satellite service?

Not every home has access to DSL Internet access and the costs of setting up this technology throughout the country, to each home, are in the billions of dollars. Satellite is a lot quicker and less expensive to hook up because it doesn't have the same infrastructure requirements. With speeds of ten times a normal dialup account, the download of information from the Internet to your computer goes from the satellite direct to your PC. The upload of information from your computer to the Internet goes first via an existing phone line to Telepak.net.

What is the difference between DSL and satellite high-speed access?

DSL operates over telephone copper wire and is distance limited. DSL only covers approximately a three-mile radius from the telephone central office or remote. With satellite service, as long as you have clear visibility to southeastern sky, you can receive the quality signal.

Why would I want to upgrade my dial-up Internet service?

To perform research quicker in support of schoolwork, business work or personal development. The faster speed means less time waiting, increasing work efficiency making telecommuting or working from home a practical reality. To decrease the time it takes to download material from the Internet. To significantly shorten your time spent waiting for downloads and to more effectively manage your time spent on the Internet.

What if I have to move?

No problem. As long as you move with-in the state of Mississippi, you can take your equipment with you to your new address. And for a small re-location fee of \$150.00, we can have your satellite service working in no time.

What is the cost?

For residential customers, the monthly service is \$59.95 and a one-time activation charge of \$280 that includes equipment and professional installation. You will receive an email after activating your service with our terms and condition and reasonable use policy.

Commercial Broadband Services

Telepak Networks, via fiber optic and other broadband facilities, specializes in offering cost efficient bandwidth necessary for data networking and telecommunications services to other carriers (wireless, IXC, CLEC, ILEC, CATV), ISPs, universities, governmental agencies, hospitals, and businesses. Telepak Networks' wide array of commercial broadband services include ATM, DS1, DS3, OC level services, SONET, and frame relay.

Today, Telepak Networks maintains over 1,780 miles of fiber optic cable throughout Mississippi, Tennessee, Alabama, Louisiana, and Florida (states in which it is certified as a CLEC).

For sales and pricing information, please complete the [inquiry form](#) or contact Phil Rice at 601-974-7142.

FAQ's

General Telepak.net Information

1. **What is Telepak.netSM?**

Telepak.net is your local gateway to all the Internet has to offer. Dedicated to serving the needs of on-the-go Mississippi families, Telepak.net is an easy to use dial-up Internet service that gets you on-line immediately! Check the weather, plan a vacation, get help with homework, or get the latest news, sports, and financial updates, all with the click of a button.

2. **Where is Telepak.net service available?**

Telepak.net is accessible through local access numbers in cities throughout Mississippi, and we're adding numbers all the time! View our list of [local access numbers](#) available today.

3. **How much does Telepak.net service cost?**

You'll find Telepak.net priced competitively with other local Internet service providers offering a similar variety of features. Review our [Residential Services](#) and follow the links for rates on specific service options, or call Customer Care for more information.

4. **Does Telepak.net provide commercial services?**

Commercial service such as Web page hosting and dedicated connections may be available depending on location. To determine availability, call Customer Care for more information.

5. **How am I billed?**

You can set up your account for credit card or bank draft or, if you prefer, you will receive a statement by mail.

6. **Do you offer technical support?**

Yes! Technical Support is available to answer any questions you may have regarding your installation, software or hardware. Live technical support specialists are on-hand to help you Monday through Friday 8:00a.m. - 10:00p.m. and on Saturdays from 9:00a.m. - 4:00p.m.

Call Tech Support toll-free at **1.888.806.HELP (4357)** or fill out our [support form](#) online.

7. **When in an area without a local access number or when traveling outside Mississippi, can I access Telepak.net service?**

Yes. Simply dial in to our out-of-area access number 1.800.720.8444. Usage is 12¢ per minute and will be billed to your account. Plus \$2.00 access fee.

Customer Care & Tech Support

8. How do I sign up?

Register by phone by calling Telepak.net Customer Care toll-free at 1.877.TELEPAK (1.877.835.3725).

9. What is my username?

Many times in our documentation you'll see the term:

username or user name

When you signed up, you chose a name for your account. We'll refer to that name throughout this site as either username or user name. Whenever you see that term, replace it with the name you've chosen. It's always in lower case.

If you've forgotten your username:

The easiest way to remember your username is that it is first part of your email address. Example - name@telepak.net is the email address. "Name" would be your username. If you still can't remember the username you chose, call Customer Care at 1-877-835-3725 and ask for assistance.

Changing your username:

After you change your username, mail sent to the old username may bounce (become undeliverable) or, if in the future someone else picks your old user name, will go to that person's mailbox. **Usernames must meet the following criteria:**

- Must be between 4 to 24 letters or numbers long.
- All lowercase
- Special characters like #,% or ^ are not allowed.

Think carefully about changing your username. Changing it is like changing your phone number--you may lose contact with some people who won't be able to get your new email address. If you decide you want to, call Customer Care 1.877.TELEPAK (835-3725).

10. What is a quota?

Your quota is how much disk space you are allowed to use on Telepak.net's servers.

Web Storage Account:

Personal accounts are allotted 5 MB of space for personal use. Commercial accounts with a domain are allotted 15 MB web storage. Additional space can be purchased for \$5.00 per month per 5 MB block.

Email Account:

Each email account is allotted 10 MB of storage. Additional storage can be purchased for \$.99 per MB per month.

11. Does Telepak Time Me Out?

It's fairly common for subscribers to accidentally leave their computers connected to the Internet long after they have finished with their online activities. Each connected user ties up a line, which is unavailable to other customers while it is in use.

To prevent annoying busy signals for the rest of our customers, and

unnecessary over-usage bills for those who forget to disconnect, the Telepak system is configured to watch our modems' idle time. If the servers see no modem activity (i.e. no data transfer) for 20 minutes, the connection will be reset. You'll be automatically disconnected.

If you're checking your email, or downloading a Web page, you won't get disconnected. Because the modems are transferring data, the system views your connection as active.

12. Telepak.net's Modem Numbers.

Our solutions address Large Businesses with more than 500 employees. To see how Time Warner provide a communications solution for this market segment, please read below.

Analog Services

Time Warner Telecom's Analog Services are provided as part of our Business Switched Services

Digital Services

Customers receive Digital Services through ISDN PRI and Digital Trunks.

Supplemental Services

Supplemental Services are additional services available for Time Warner Telecom's switched ser to enhance their service.

Special Switched Services

Special Switched Services provide the capability for Time Warner Telecom customers to expand little or no equipment investment. Historically referred to as 'foreign exchange' service, these proc customers to obtain switched service in areas or even other cities without the need for a physical those cities.

- ▶ Business Expansion Service
- ▶ Expanded Exchange Service
- ▶ Intercity Switched Service
- ▶ Special Switched Services

Calling Plans

- ▶ **Long Distance** - The Long Distance product suite is offered in conjunction with other Time Telecom switched products to complete the switched product portfolio. Time Warner Telec distance traffic over their fiber-based regional networks and connects with various Tier I Int carriers' long haul transport.
- ▶ **Local** - Extended Calling Plans (where available) provide you with expanded outbound cal local calling area. Our plans are specifically designed to provide you expanded outbound c reduces your long distance expenses.

SONET

High capacity channels for full duplex, synchronous optical transmission of digital data.

Time Warner Telecom's SONET services are available in both point-to-point and multipoint ring c

Dedicated Internet Access

Time Warner Telecom's high-performance Internet backbone is designed to provide flexibility, sc security, while offering redundancy in the core.

Co-location Services

Co-location provides reliable and secure space in Time Warner Telecom's data centers to locate back up, remote, or virtual presence and obtain Wide Area Network services from Time Warner T cabinets, cages, and/or racks are available depending on the market. We offer this service in 40 c

Dedicated Web Hosting

Time Warner Telecom can handle large capacity requests when it hosts your web site.

Metro Ethernet NLAN

Time Warner Telecom's Native LAN service connects multiple business locations with a technology already use and understand - Ethernet.

Ethernet Internet Access

EIS provides Internet over Ethernet to customers requiring a scalable Internet solution. This service is available to customers who co-locate their Internet CPE in Time Warner Telecom's carrier-grade co-location facility (EIS) or delivered to the customer's premise (NLAN EIS).

Storage Transport (ESCON/Fibre Channel)

Using the most current technology, DWDM (Dense Wave Division Multiplexing), Time Warner Telecom can transport your native traffic, without any protocol translation to your secure site miles away. Time Warner Telecom will monitor the link for you, so you may spend your valuable time concentrating on your core business. Multiple paths will ensure that your traffic will get to its destination every time.

Wavelength/Lambda

Time Warner Telecom offers wavelength services that allow one or many direct interfaces to extra capacity point-to-point channels. Each wavelength has a standard capacity of either 2.5 Gbps or 10 Gbps.

DS1/DS3

Dedicated, high capacity, full duplex channel with line speed of 1 544/45 Mbps isochronous serial

Additional Information

Business Switched Services ☎

Time Warner Telecom offers business customers a "real" choice for local telephone service.

Co-Location Service ☎

Time Warner Telecom's Co-location Service supports your expanding network needs with a secure environment and dedicated space for your equipment and storage of your information.

Dedicated High Capacity Services ☎

Time Warner Telecom's Dedicated High Capacity Services offer a complete range of transmission rates from 1.5 Mbps to 10 Gbps.

Dedicated Internet ☎

Our Dedicated Internet Access Products deliver high-speed, dedicated connections that ensure a dedicated Internet bandwidth needed for critical data.

Digital Trunks ☎

Time Warner Telecom's digital facilities provide access to the Public Switched Telephone Network through state-of-the-art switches that will serve your business needs today and tomorrow.

ISDN PRI ☎

Time Warner Telecom's Integrated Services Digital Network Primary Rate Interface (ISDN PRI) provides access to the Public Switched Telephone Network through reliable state-of-the-art switches.

Long Distance Services 

Time Warner Telecom offers specialized long distance business solutions that meet each individual's needs.

Native LAN 

Connect your multiple business locations with a technology that you already use and understand.

Special Switched Services 

Time Warner Telecom customers can use Special Switched Services to expand into new markets without equipment investment.

Storage Transport Services 

Time Warner Telecom offers a suite of services that will provide the best solution for your company's Channel, ESCON, or Ethernet transport for your metro needs.

Web Hosting 

We empower your company to host web applications on a dedicated server that is tailored to meet your needs.

Corporate Offices 10475 Park Meadows Drive Littleton, CO 80124 303.566.1000.

TIME WARNER TELECOM

Delivering Networks... Empowering Business.

BUSINESS SWITCHED SERVICES

There's a new dial tone in town! Time Warner Telecom now offers business customers a "real" choice for local telephone service. We provide a variety of switched services for your local voice, data and video transport needs.

We built the most modern and powerful communications networks in the industry. State-of-the-art digital switches route communications traffic quickly and efficiently on our own leading-edge, SONET-based fiber optic networks. Backed by a modern National Operations Center and highly skilled local technicians, we offer virtually uninterrupted service to meet your telecommunications needs.

Call your local Time Warner Telecom representative for details about our business switched service offerings. Or call our National "Best" Customer Service Center at 1-888-333-0520. Here is a sample of our business switched services.

- **ISDN PRI:** Provides ISDN capabilities and efficiencies for your switched voice, data and video needs. Ask your local Time Warner Telecom representative for details.
- **Digital Trunks:** Flat, Measured or Message depending on local availability. Provide quality

connections to customer provided PBX equipment.

- Digital Facility
- Inward Digital Trunks
- Outward Digital Trunks
- Two-way Digital Trunks
- DID Service (available on Inward and Two-way Digital Trunks)

■ **Business Lines:** Flat, Measured or Message depending on local availability. All provide customers with a quality analog voice grade telephone line available for use at any time.

- **Business Line Features:** (Discounts for multiple [2-6] feature purchases)
 - Call Waiting; Cancel Call Waiting
 - Call Forwarding; Call Forward Variable; Call Forward Busy;
 - Call Forward Don't Answer
 - Selective Call Forwarding
 - Remote Call Forwarding
 - Three-Way Calling
 - Speed Calling: 8 Number, 30 Number
 - Distinctive Ringing (up to two additional numbers)
 - Caller ID: with Number Delivery; with Name Delivery
 - Combined Caller ID Blocking: Per Line; Per Call
 - Continuous Redial
 - Last Call Return
 - Priority Call
 - Selective Call Rejection
 - Customer Originated Trace

- **Voice Messaging:** (Available in selected markets)
 - Basic, Enhanced, Deluxe, Deluxe Multi-Mailbox
 - Automated Attendant: First Tier, Additional Tier
 - Automated Attendant with Busy Hold: First Tier, Additional Tier,
 - Revert to Operator
 - Customer Design Consulting
 - Customized Reports

SUPPLEMENTAL SERVICES

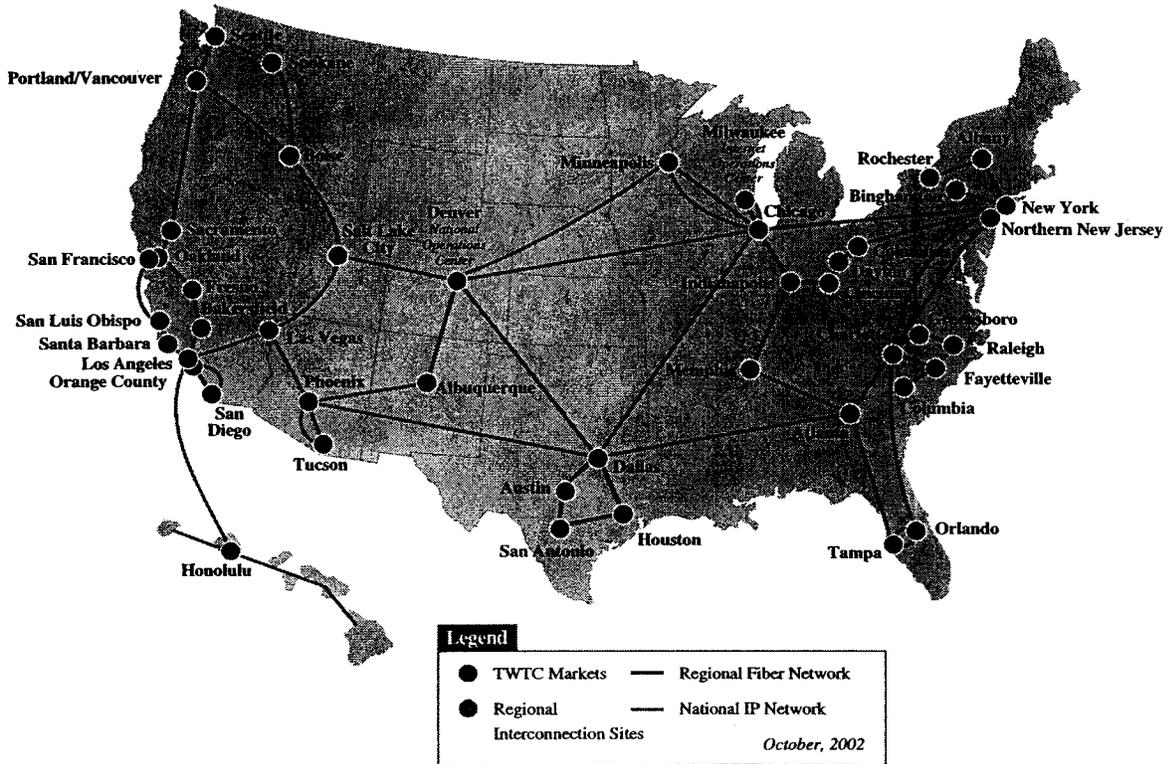

- **Telephone Numbers:**
 - Individual DID Numbers
- **Listings:** Main, Standard, Non-Published, Non-Listed.
 - Alternate Telephone Number/Night
 - Cross Reference, Additional Cross Reference
 - Duplicate, Additional Duplicate
 - Indented, Additional Indented
- **Hunting:**
 - Series Completion Hunting: Circular, Regular
 - Multi-Line Hunting: Circular, Regular, UCD
- **Blocking Services:**
 - 900 & 700 Blocking
 - Third Number and Collect Call Billing Restriction
 - Toll Restriction

Not all products and services are available in all markets. Please contact your local Time Warner Telecom representative for availability.

BUSINESS SWITCHED SERVICES

ABOUT TIME WARNER TELECOM

Time Warner Telecom is the leading provider of metro-area broadband optical networks and services to businesses. We deliver "last-mile" broadband data, voice, Dedicated Internet Access, and Dedicated Web Hosting in 44 major U.S. markets. Our strong financial position allows us to deliver powerful networks, robust products, and superior customer care to meet your needs. We're here for you today, tomorrow, and for the next 100 years.

Time Warner Cable dials in phone service

Last modified: May 22, 2003, 12:02 PM PDT

By Ben Charny and Evan Hansen
Staff Writers, CNET News.com

[PRINT](#) [E-MAIL](#) [YOUR TAKE](#) [SAVE](#)

update AOL Time Warner's entry into voice service Thursday highlights the latest headache for regional phone companies, whose lock on the so-called local loop is looking increasingly precarious.

Read more about
DSL, telephony

Time Warner Cable's "Digital Phone" includes unlimited local, in-state and domestic long-distance telephone service for \$40 a month and will be initially available only in the Portland, Maine, area. Combined with similar offerings from cable providers such as Comcast and Cablevision Systems, major local phone companies across the country—sometimes called RBOCs (regional Bell operating companies)—are close to seeing the collapse of the last barriers to local phone competition.

"This is one of the big fears among the RBOCs, that cable companies will make a major push in local telephone markets," said Mark May, an analyst at Kaufman Bros. "Cox and Comcast have launched local services, and cable operators have made inroads offering telephone service at significant discount to the RBOCs."

After years of delay, real competition is finally making its way into the local residential telephone market, promising enormous industry upheavals similar to those that shook the long-distance market nearly two decades ago.

The number of local telephone lines controlled by the nation's major phone companies has been dropping steadily since 2001, according to In-Stat/MDR analyst Norm Bogen. In the first half of 2001, the RBOCs saw the number of local phone lines on their networks drop by about 2 percent. Since then, the trend has continued, with the Bells losing 4 percent of their local lines by the first half of 2002.

Bogen said there are three reasons for the declines. The main reason is the growing number of people replacing landline phones with cell phones, he said. But he added that more people are also choosing Internet-connected phones as a second phone line rather than going the traditional route. Consumers can choose between services provided over broadband connections using special software from companies such as Vonage DigitalVoice, as well as cable phone

services such as Time Warner's offering announced Thursday.

Calling plans are the latest weapon cable providers are using as they battle for dominance of U.S. broadband services market. Nearly 60 percent of all U.S. homes get broadband from their cable television provider. The rest of the homes wired for broadband in the United States use digital subscriber line (DSL) connections from telephone companies.

The race to attract broadband customers has led some DSL services to slash prices; for example Verizon cut prices by about 30 percent in recent months to about \$30 for its voice service customers. Most cable broadband services by contrast charge between \$40 and \$50 a month, although they say they provide superior performance for the price.

As Time Warner's announcement Thursday shows, however, much more is at stake than broadband market share: While cable voice services are still in their infancy, the potential threat of a voice upgrade to cable broadband has turned what was once a fight over data services into an all-out war for telecommunications service in the home.

Cable and telephone companies use bundles of steeply discounted services to attract and keep customers. Cable companies sell television and broadband access at discounted rates, but only when bought as part of a package of services. Telephone companies offer similar deals on telephone and broadband connections.

Until recently, telephone companies didn't worry about cable adding voice services into their bundles. But the growing sophistication of voice over IP, which turns voice calls into digital packets for dispatch over the Internet, allows cable companies to sell cable TV, telephone service and broadband connections on one bill. That's one more service—specifically cable television—than telephone companies can offer.

Comcast said it has signed up 1.4 million voice service subscribers in the first quarter of 2003, down slightly from the December quarter. That accounts for 16.5 percent of the company's cable subscribers in the areas where the service is offered. Cox, meanwhile, said it has signed up 782,546 voice service subscribers in the first quarter of 2003, accounting for 19 percent of its cable subscribers.

"We operate in a competitive market and we have a pretty good track record when going up against competition," said Keith Coccozza, a Time Warner Cable spokesman. He would not discuss the cable company's future release plans specifics, only saying: "We are going to take our time in the beginning."

In their current form, these new cable company phone services pose little threat—more like a novelty act—in places like Coatsville, Pa., where Comcast is trialing its telephone service. But if they were to be expanded substantially, "then the best way to describe this would be: 'wow,'" said In-Stat/MDR senior analyst Daryl Schooler.

"What does any of the major phone companies have on their bundle?"

Local and long-distance and data," Schooler said. "This move by the cable guys gives them local, long-distance voice, video and data all over one pipe."

There is very little evidence yet to gauge the effectiveness of cable companies' move into voice services. Both cable and DSL providers continue to add new subscribers, despite the economic doldrums. The largest VoIP provider for now is Vonage DigitalVoice, which has about 25,000 subscribers.

Digital Phone subscribers will get all the amenities they are used to, including caller ID and call waiting. They can also keep the same phone number if they are switching from another telephone service provider, according to a description of the calling plan from Time Warner Cable.

Whether the \$40 a month charge includes a converter—a small box that changes telephone signals to digital signals for transport over the Web—was not immediately clear.
