

**NEVADA BELL TELEPHONE COMPANY
DESCRIPTION AND JUSTIFICATION
APRIL 29, 2005
TRANSMITTAL NO. 101**

PURPOSE

Nevada Bell Telephone Company (NBTC) proposes to add non-channelized OC192c service to the already existing OCN point to point product line.

DESCRIPTION

OCN PTP service is a high-speed and secure service especially suited for transporting large volumes of information between two locations. This project will add the OC-192c interface to the SONET OCN point to point service offering.

Concatenation allows super rate payloads at OCN rates and is presented by the designation "c".
