

Telephone Utilities Exchange Carrier Association (TUECA) F.C.C. No. 2
Asynchronous Transfer Mode 4 Mbps Multimedia Virtual Circuit Channel
May 2, 2005

This filing is being made to enhance the existing Asynchronous Transfer Mode (ATM) cell relay offering for TUECA exchanges. This filing proposes to expand the MultiMedia Virtual Circuit Channel (MM VCC) optional feature to allow the customer to send 4 Mbps increments of high-speed multimedia transmissions to end user customers equipped with TUECA's ADSL service.

The proposed rates are designed to maintain parity with the NECA ATM service offerings for uniformity of service since several CenturyTel exchanges also participate in the NECA interstate tariff.

Projected demand and revenue effect, along with associated annual costs and annual revenues are shown on Exhibit 1.
