**10. FEDERAL GOVERNMENT SPECIALIZED SERVICE  
OR ARRANGEMENTS**

**10.8 SERVICE OFFERINGS**

**10.8.1 TYPE AND DESCRIPTION (Cont'd)**

G. Government Emergency Telecommunications Service (GETS)

1. GETS is an emergency telecommunications service available to customers designated by an agency or branch of the Federal Government to transport National Security/Emergency Preparedness (NS/EP) originating and terminating access calls over the Public Switched Network (PSN) where technically feasible. GETS utilizes a government identified access code which distinguishes the call as a GETS NS/EP emergency call. GETS is not available in Company wire centers where Special Routing Access Service (SRAS) is provided.
2. The customer designated by the agency or branch of the Federal Government to provide GETS must have CST2, CST3, Feature Group C or Feature Group D Switched Access Service to transport the GETS NS/EP access call. A GETS NS/EP access minute will be rated the same as any other access minute set forth in this Tariff.
3. Network management service levels as set forth in 6.5.1, preceding, are applicable to a GETS NS/EP access call.
4. GETS NS/EP access minutes to a customer's network not designated to provide GETS will be administered by the Company the same as any other access minute. Billing disputes over Switched access minutes as the result of a GETS NS/EP access call to a nondesignated customer's network must be resolved with the appropriate agency or branch of the Federal Government.
5. A one hundred percent (100%) PIU factor will apply to GETS access minutes and nonrecurring charges.
6. The appropriate agency or branch of the Federal Government is responsible for ordering the government identified access code per end office in each LATA.

**10.8.1 TYPE AND DESCRIPTION**

G. Government Emergency Telecommunications Service (GETS) (Cont'd)

7. GETS Alternate Carrier Routing (ACR) Feature (T)

ACR is an advanced network feature that provides alternate routing of a NS/EP call in the originating direction to a GETS customer using FGD or CST3 type signaling where technically feasible. The NS/EP call is first routed to the presubscribed customer of the originating line, when the presubscribed customer is a participating GETS customer. When the NS/EP call cannot be successfully routed, attempts will be made to route the call to alternate GETS customers. The sequential order in which the NS/EP call is routed is preselected on a per switching office basis by the agency or branch of the Federal Government responsible for GETS.

The ACR Development charge is for the development of advanced network service logic per request. The ACR Activation or ACR Deactivation charge is for the translation requirements of the ACR feature by switching office. The ACR monthly rate is for the analysis required to determine the preselected alternate route when a NS/EP call occurs. All ACR rates and charges, as set forth in 10.8.2, following, are billed to the appropriate agency or branch of the Federal Government responsible for GETS or its authorized representative. (C)

8. GETS Calling Party Number (CPN) Feature (T)

CPN is an advanced network feature that passes the government identified access code information as the calling party number on a NS/EP originating call detail record instead of the actual calling party number using FGD or CST3 type signaling where technically feasible. NS/EP calls originating at switching offices not equipped with the CPN feature will be processed with the actual calling party number. The government identified access code information is determined by the agency or branch of the Federal Government responsible for GETS.

The CPN monthly rate is for the recording of the government access code information on the NS/EP call detail record. The rates and charges for the CPN feature are set forth in 10.8.2, following. (C)

G. Government Emergency Telecommunications Service (GETS) (Cont'd)

9. High Probability of Completion Feature

(T)

a. Description

GETS High Probability of Completion (HPC) provides GETS users with enhanced routing priority in the public switched network. HPC significantly improves the completion of GETS NS/EP access calls under severe network congestion and damage conditions (e.g., natural disasters, national emergencies, etc.).

The HPC feature sets the call priority value and provides the capability to queue the GETS NS/EP access call against a busy Switched Access trunk group in a route list until a member of that trunk group becomes idle. As soon as a trunk group member becomes idle, it is offered to the queued GETS NS/EP access call before any other calls are processed.

The HPC feature works with Switched Access trunk groups equipped with SS7 Out of Band Signaling or Equal Access Multifrequency Address Signaling. The HPC feature is available in specified wire centers only as negotiated between the Company and the customer designated by the agency or branch of the Federal Government to provide GETS.

b. Rate Application

The nonrecurring charges and monthly rates for the HPC feature are described, following. The rates and charges are set forth in 10.8.2.G., following.

- The HPC Activation Charge is a nonrecurring charge and monthly rate for the activation and maintenance of the translation requirements per Company end office switch and/or access tandem.
- The HPC Change Charge is a nonrecurring charge to change the feature on a per switch, per occurrence basis.
