

ACCESS SERVICE

16 - Bell South Telecommunications Relay Service Transport (Cont'd)

16.1 Bell South Telecommunications Relay Service Transport (Cont'd)

16.1.7 Rate Regulations (Cont'd)

(A) Local Channel - The Bell South Telecommunications Relay Service Transport (T)
 Local Channel rate element provides for a 1.544 Mbps communications path (T)
 between the premises of the Bell South Telecommunications Relay Service (T)
 Transport center and the Telephone Company serving wire center for that (T)
 premises. Monthly recurring charges and installation nonrecurring (T)
 charges, on a first and additional service installed basis, are (T)
 applicable.

(B) Interoffice Channel - The Bell South Telecommunications Relay Service (T)
 Transport Interoffice Channel rate element provides for a 1.544 Mbps (T)
 communications path between the Telephone Company serving wire center of (T)
 the Bell South Telecommunications Relay Service Transport center's (T)
 premises and the Bell South Telecommunications Relay Service Transport (T)
 center specified Telephone Company digital tandem switching office. (T)
 Monthly recurring and installation nonrecurring charges are applicable (T)
 to the "fixed" component of the interoffice channel. Monthly recurring (T)
 charges, on a per mile basis, are applicable to the distance sensitive (T)
 component of the interoffice channel, measured from the serving wire (T)
 center to the Telephone Company tandem office using V & H coordinate (T)
 methodology specified in 6.7.13 preceding.

Where Bell South Telecommunications Relay Service Transport is (T)
 provided over Special Access (a.k.a. Bell South SPA) DS3 level (T)
 services, shared use procedures, as described in 7.4.8, preceding, (T)
 apply.

A change in either the location of the Bell South Telecommunications (T)
 Relay Service Transport center's premises or of the Bell South (T)
 Telecommunications Relay Service Transport tandem switch designated is (T)
 considered to be a disconnect of Bell South Telecommunications Relay (T)
 Service Transport. Installation of new Bell South Telecommunications (T)
 Relay Service Transport will be required at the new location/locations. (T)

ACCESS SERVICE

18 - BellSouth Operator Services

18.3 BellSouth Operator Assistance Access Service (Cont'd)

18.3.4 Rate Regulations and Payment Arrangements (Cont'd)

(E) BellSouth OA Access Service Savings Plan (Cont'd)

- (8) At any time during the active option payment plan period an existing BellSouth OA Access Service Savings Plan customer may request an upgrade to a service option having a higher usage commitment and/or a longer payment plan period. A new BellSouth OA Access Service payment plan agreement is required to implement the change.
- (9) An existing BellSouth OA Access Service Savings Plan customer may request termination of their plan participation. If participation in the customer's currently active plan is ended prior to the scheduled expiration of the payment plan period, back billing of the difference between the then active plan option rates and the standard rates will be applied to a percentage of the calls that have been billed since the initiation of the plan options as follows:

When Plan Option Is Terminated Prior To its Scheduled Expiration and Within ___ Months of Initiation Date	This is the Percentage of Calls to which Back Billing Applies
12 Months	100%
24 Months	90%
36 Months	75%
48 Months	45%

Example: A BellSouth OA Access Service Savings Plan customer who terminates their plan option after 12 months would be billed back on ninety percent (90%) of the calls billed under the plan.

- (10) A customer who terminates their BellSouth OA Access Service Savings Plan is eligible to initiate a new plan six (6) months from the termination date.
- (11) In the event of a merger or acquisition where some or all parties to the merger or acquisition have existing BellSouth OA Access Service Savings Plan options in place, each existing customer may continue their plan option to conclusion provided usage for each existing customer can be segregated from the whole and measured by the Telephone Company. Alternatively, the existing BellSouth OA Access Service Savings Plan options of each party to the merger or acquisition may be terminated without penalty provided a new BellSouth OA Access Service Savings Plan option is made effective for the merged or acquiring entity in which the annual usage commitment is greater

18.3.4 Rate Regulations and Payment Arrangements (Cont'd)

(C) Service Credit for BellSouth OA Access Service (Cont'd)

(3) A request(s) for call completion was not returned to the customer's premises due to failure of the Telephone Company's equipment or of the BellSouth OA Access Service.

(D) In the event that OA Access Service is terminated prior to the one (1) month minimum subscription period, usage equal to the customer's forecasted monthly call volume as described in 18.3.3(B) will be applied to the standard per call rates detailed in 18.3.5 to determine the usage portion of the customer's bill.

(E) BellSouth OA Access Service Savings Plan

(1) The BellSouth OA Access Service Savings Plan provides BellSouth OA Access Service customers the option to receive a reduced rate per BellSouth OA Access Service call in exchange for their commitment to maintain specified minimum annual usage for all OA Access calls sent to the Telephone Company during a specified payment plan period. A BellSouth OA Access Service payment plan agreement is required to implement this option.

(2) BellSouth OA Access Service Savings Plan subscriber rates are as detailed for each plan option in 18.3.4(E)(13) following.

(3) Application of BellSouth OA Access Service Savings Plan rates will commence with the first bill period following the plan option effective date, as agreed to, by and between the customer and the Telephone Company.

(4) The minimum payment plan period of a BellSouth OA Access Service Savings Plan is twenty-four (24) months and the maximum payment plan period is forty-eight (48) months.

(5) Except as indicated in 18.3.4(E)(8), 18.3.4(E)(9), 18.3.4(E)(10) and 18.3.4(E)(11), the customer must maintain for each 12 month period during the payment plan BellSouth OA Access Service call usage greater than or equal to ninety-five percent (95%) of the minimum OA Access Service call usage committed to per the payment plan options selected by the customer.

(6) If BellSouth OA Access Service per call usage for a 12 month period during the payment plan falls below ninety-five percent (95%) of the minimum OA Access Service call usage committed to per the customer's active plan options, the customer will be billed back the difference between the billed plan rate and the standard rate for calls billed during that 12 month period.

(7) The Telephone Company will provide an annual true-up of charges applied based on the true-up of all BellSouth OA Access Service calls sent to the Telephone Company. Adjustments will be applied, if appropriate.

18.3 BellSouth Operator Assistance Access Service (Cont'd) (N)

18.3.1 General Description (Cont'd) (N)

(D) Optional Call Branding Announcements (N)

At the customer's option, Branding Announcements are provided on both (N)
the front end and back end of each BellSouth OA Access Service call (N)
served. A front end recording will greet each customer end user call (N)
with a message of up to three (3) seconds duration which identifies the (N)
customer's service for example, "(customer name)". (N)

Recording of initial Branding Announcements and changes thereto will be (N)
performed on an implementation schedule agreed to between the Telephone (N)
Company and the customer. (N)

The customer may request changes to the Branding Announcements currently (N)
being provided via BellSouth OA Access Service. The Telephone Company (N)
will implement such changes within thirty (30) days of receiving the (N)
customer's request at the rates and charges detailed for branding in (N)
18.3.5 following. (N)

(E) BellSouth OA Access Service will be provided at rates and charges as set (N)
forth in 18.3.5 following, except as provided for in 18.3.4(D) (N)
following. (N)

(F) The minimum subscription period for which BellSouth OA Access Service is (N)
provided and for which charges apply is one (1) month. (N)

18.3.2 Operator Assistance Trunks (OA Trunks) (N)

Operator Assistance Trunks (OA Trunks) must be ordered from and provided by (N)
the Telephone Company to carry the customer's operator services traffic from (N)
its location to the BellSouth OA Access Service location. (N)

(A) OA Trunks must be present in sufficient number to handle the customer's (N)
maximum forecasted call volume. (N)

(B) OA Trunks have the same transmission specifications as do BellSouth SWA (N)
FGD trunks, as described in 6.2.4 of this tariff. The Telephone (N)
Company's BellSouth OA Access Service location will interface directly (N)
with the customer's OA Trunks. (N)

(C) OA Trunks are to be used exclusively to provide transport of a (N)
customer's operator services calls from their premises to the BellSouth (N)
OA Access Service location. (N)

(D) Rates and charges for OA Trunks are as detailed in 18.3.5 following. (N)

18.3.3 Obligations of the Customer (N)

(A) The customer will cooperatively test with the Telephone Company at the (N)
time of BellSouth OA Access Service installation. (N)

(B) The customer will provide the Telephone Company a forecast of their (N)
monthly automated and live operator handled OA Access Service calls. (N)

EFFECTIVE: JULY 15, 2000

ACCESS SERVICE

18 - BellSouth Operator Services

18.3 BellSouth Operator Assistance Access Service

18.3.1 General Description

BellSouth Operator Assistance Access Service (BellSouth OA Access Service) provides access to the BellSouth OA Access Service location(s) and the use of BellSouth OA Access Service equipment and operators, when required, to furnish operator assistance to end users on the customer's behalf, to obtain information for the customer's later use in billing for service provided by the Telephone Company to the customer's end users on the customer's behalf and for obtaining information for the customer's later use to potentially complete calls returned by the Telephone Company to the customer's location per the end user's request.

(A) BellSouth OA Access Service Locations

The Telephone Company will specify the BellSouth OA Access Service location(s) which provide(s) the BellSouth OA Access Service as shown in NATIONAL EXCHANGE CARRIER ASSOCIATION, INC. TARIFF F.C.C. No. 4.

When it becomes necessary, as determined by the Telephone Company, to change a BellSouth OA Access Service location, the Telephone Company will notify the involved customers six months prior to the change. For such changes, the regulations as set forth in 2.1.7 of this tariff apply.

(B) Pre-Requisites for BellSouth OA Access Service Provision

Each BellSouth OA Access Service requires Telephone Company provided, customer and application dedicated Operator Assistance trunks (OA Trunks) interconnecting the customer's premises to the BellSouth OA Access Service location(s), as described further in 18.3.2 following. In addition, the customer must have in place or must order from the Telephone Company Common Channel Signaling System Seven (CCS7) links interconnecting the customer's premises and the Telephone Company's CCS7 network, as described in 6.1.3 of this tariff. Further, OA Access Service requires the customer to have a Northern Telecom DMS 250/500 switch equipped with Northern Telecom software release level UCS08 (or higher) and feature packages URLT 1-4.

(C) BellSouth OA Access Service "flow"

When the customer routes an end user request for operator assistance to the BellSouth OA Access Service location via the facilities described in paragraphs (A), and (B) preceding, the Telephone Company will optionally brand the call with the customer's name, serve the end user's request on the customer's behalf, obtain information needed for the customer to bill for the service provided, obtain information needed for the customer to complete the end user's call, if call completion is requested, and then will return the information obtained, as well as the call, if call completion is requested, to the customer location with an optional "thank you" branding message.

18.2 Bell South Inward Operator Services (Cont'd)

18.2.4 Rate Regulations (Cont'd)

- (B) No charge applies if the operator encounters a trouble condition, no circuit is available, the called line is not verifiable (pagers, some cellular, etc.), or the requesting customer indicates that the call is to or from an official public emergency agency. An official public emergency agency is defined as a government agency which is operated by the federal, state or local government, and has the capability and legal authority to provide prompt and direct aid to the public in emergency situations. Such agencies include the local police, state police, fire department, licensed hospitals, etc.
- (C) Switched access premium rates and charges, as set forth in 6.8 preceding will apply to all end user requests for interLATA service transferred from the LOS location to the customer location via the customer's Bell South SWA FGC, Bell South SWA FGD, or Bell South SWA TSBSA 2 or Bell South SWA TSBSA 3 trunks. In addition, Rate Regulations as specified in 6.7 preceding will apply.

19.6 Rate Regulations

The following rate elements apply to BellSouth Line Information Data Base Access Service.

(T)

(A) BellSouth Line Information Data Base Common Transport

(T)

BellSouth Line Information Data Base Common Transport provides for transport of the customer's query from the BellSouth Line Information Data Base Location to the data base (SCP). This charge will apply each time the customer requests and receives validation of a Telephone Company Calling Card or billed number and each time the customer requests and receives the status of a billed number associated with an other telephone company line stored in the BellSouth Line Information Data Base.

(T)

(T)

(T)

(T)

(T)

(B) BellSouth Line Information Data Base Validation

(T)

(T)

BellSouth Line Information Data Base Validation provides for query of the data resident in the BellSouth Line Information Data Base. This rate will apply each time a customer requests and receives validation of a Telephone Company Calling Card or billed number and each time the customer requests and receives the status of a credit card or billed number associated with an other telephone company line stored in the BellSouth Line Information Data Base.

(T)

(T)

(T)

(T)

(C) Originating Point Code Establishment or Change Charge

The Originating Point Code Establishment or Change Charge provides for the establishment or change of a customer requested Originating Point Code. This charge is nonrecurring and will apply each time that the customer requests and receives the establishment of a new Originating Point Code or requests and receives a change to an existing Originating Point Code. These codes are to be used for billing BellSouth Line Information Data Base Common Transport and BellSouth Line Information Data Base Validation.

ACCESS SERVICE

19 - BellSouth Line Information Data Base Access Service (Cont'd)

19.5 Jurisdictional Report Requirements (Cont'd)

(A) Percent Interstate Use (PIU) (Cont'd)

(4) (Cont'd)

(b) For BellSouth Line Information Data Base Common Transport and Validation, the PIU will be applied to the total number of validation query responses provided and the resulting figure multiplied by the rates per query to determine the amount that the customer will be billed for interstate usage. (For example, a customer who receives 100,000 query responses and reports a PIU of 90% will be billed $.90 \times 100,000 \times \$0.00030 = \$27.00$ for BellSouth Line Information Data Base Common Transport and $.90 \times 100,000 \times \$0.04200 = \$3,780.00$ for Validation). (T)

(5) If a billing dispute arises or if a regulatory commission questions the service PIU reported by the customer to the Telephone Company, the Telephone Company will require the customer to provide the data the customer uses to determine the reported PIU. The customer must supply the data within 30 days of the Telephone Company request. The customer must keep records from which the percentage was determined and upon request of the Telephone Company must make the records available for inspection as reasonably necessary for purposes of verification of the customer reported PIU.

ACCESS SERVICE

19 - BellSouth Line Information Data Base Access Service (Cont'd)

19.5 Jurisdictional Report Requirements

(A) Percent Interstate Use (PIU)

BellSouth Line Information Data Base Access Service customers may transport both interstate and intrastate queries to the BellSouth Line Information Data Base Location. Because the Telephone Company's billing system is unable to determine jurisdiction of customer queries, the customer must report to the Telephone Company, the percent interstate use (PIU) for its BellSouth Line Information Data Base Access Service. (T)

(1) At the time the customer orders BellSouth Line Information Data Base Access Service the customer must state in its order the PIU anticipated. (T)

(2) The customer must report the PIU of its BellSouth Line Information Data Base Access Service quarterly. (T)

(3) When the customer computes the PIU for BellSouth Line Information Data Base Access Service, he must subtract the percentage from 100 and the difference is the percent intrastate use. The sum of the interstate and intrastate percentages must equal 100 percent. (T)

(4) The PIU provided by the customer as set forth in Section 19.5(A)(3) preceding, will be used to bill the customer for BellSouth Line Information Data Base Access Service as follows: (T)

(a) The PIU reported will then be applied to the rates for CCS7 Signaling Connections and CCS7 Signaling Terminations to arrive at the amount the customer is billed for interstate usage of these facilities each month. (For example, a customer who reports a PIU of 90% will be billed 90% of the monthly recurring rate for its CCS7 Signaling Connections and CCS7 Signaling Terminations.)

ACCESS SERVICE

19 - BellSouth Line Information Data Base Access Service (Cont'd)

19.4 Ordering Requirements and Payment Arrangements (Cont'd)

(B) Cancellation of a Special Order

A customer may cancel a Special Order for BellSouth Line Information Data Base Access Service on any date prior to the service date. The cancellation date is the date the Telephone Company receives written or verbal notice from the customer that the Special Order is to be canceled. The verbal notice must be followed by written confirmation within 10 days. (T)

When a customer cancels a Special Order for BellSouth Line Information Data Base Access Service after the order date but prior to the start of service, the appropriate charges as set forth in Section 5 preceding apply for the cancellation of the BellSouth Line Information Data Base Access Service Special Order. (T)

(C) Changes to a Special Order

When a customer requests changes to a pending order for BellSouth Line Information Data Base Access Service, such changes will be undertaken if they can be accommodated by the Telephone Company. The appropriate charges as set forth in Section 5 preceding will apply for the BellSouth Line Information Data Base Access Service Special Order changed.

(D) Moves

BellSouth Line Information Data Base Access Service moves are any change in the physical location of the point of termination at the customer's premises or the physical location of the customer's premises. Moves will be treated as set forth in 6.7.7 preceding, and all associated nonrecurring charges will apply. Minimum period requirements will be established at the new location as set forth in 6.7.7 preceding. In addition, all outstanding minimum period charges for the discontinued service will apply. (T)

(E) BellSouth Line Information Data Base Access service Rearrangements

Nonrecurring charges apply to BellSouth Line Information Data Base Access Service rearrangements, as set forth in 6.7.1 preceding. (T)

ACCESS SERVICE

19 - BellSouth Line Information Data Base Access Service (Cont'd)

19.2 Obligations of the Telephone Company (Cont'd)

(H) Provision Against Fraudulent Use of Service (Cont'd)

Telephone Company established fraud threshold level. The Telephone Company maintains and operates a 24 hour, 7 day a week fraud control center for the monitoring of customer queries sent to the BellSouth Line Information Data Base. (M)

Thresholds for the monitoring of calling card, billed-to-third party, and collect calls are established and changed when warranted. When an established threshold is exceeded, an alert is generated and sent to the Telephone Company fraud control center for investigation and action, if warranted. The fraud threshold levels will be applied uniformly to all customers. The Telephone Company also automatically deactivates calling cards with unusually high calling card usage. The Telephone Company has procedures in place to ensure that fraud alerts are investigated by the Telephone Company and that appropriate action is taken expeditiously. (M)

(I) BellSouth Line Information Data Base Access System Management (M)

The Telephone Company will administer its BellSouth Line Information Data Base Access Service to insure the provision of acceptable service levels to all customers. During periods of system congestion, an automatic call gapping procedure will be utilized to control such congestion. The automatic call gapping procedure will tell the switch the gap (how long the switch should wait before sending another query) and the duration (how long the switch should continue to perform gapping). For example, during an overload condition, the automatic call gapping procedure will tell the BellSouth Line Information Data Base when to begin to drop one out of three of the queries received. This call gapping procedure will be applied uniformly to all users of BellSouth Line Information Data Base Access Service. (M)

The Telephone Company maintains the right to invoke manual intervention of the automatic call gapping procedure to preserve the integrity of the network. (M)

(J) Billed Number Screening (M)

At the request of a customer, The Telephone Company Business Office will confirm which Toll Billing Exception (TBE) codes are associated with the customer(s) lines. (M)

(K) Conversion of Arrangements (M)

During the last four months of 1997, the Telephone Company will convert from the existing Line Information Data Base arrangement in which two Line Information Data Base Locations to which the customer must obtain (M)

(E) Transmission Specifications

Each BellSouth Line Information Data Base Access Service transmission path is provided with transmission specifications as set forth in Technical Publication TR-TSV-000905 for immediate action limits, acceptance limits and maintenance limits. (T)

(F) Acceptance Testing and Testing Capabilities

The Telephone Company will cooperatively test with the customer at the time of installation the parameters as specified in Technical Publication TR-TSV-000954.

(G) LIDB Data Specifications

The BellSouth Line Information Data Base will contain a record for every working line number and Billed Number Group served by the Telephone Company. Other exchange carriers who may store their data in the BellSouth Line Information Data Base are requested to provide this data as well. (T)

The Telephone Company will update the BellSouth Line Information Data Base information; e.g. add, delete, and modify customer accounts as customers move, become delinquent on their account, or order new service, on a daily basis. (T)

The Telephone Company has procedures in place to deactivate billing validation data in the event that it is being used fraudulently. Calling cards identified or suspected of being fraudulently used will be updated 7 days a week, 24 hours a day as set forth in (H) following.

(H) Provision Against Fraudulent Use of Service

End user information, pertinent to the investigation of fraud, may be shared with BellSouth Line Information Data Base Access Service customers when validation queries for the specific customer reach the Telephone Company established fraud threshold level. The Telephone Company maintains and operates a 24 hour, 7 day a week fraud control center for the monitoring of customer queries sent to the BellSouth Line Information Data Base. (T)

EFFECTIVE: NOVEMBER 2, 2002

ACCESS SERVICE

19 - BellSouth Line Information Data Base Access Service (Cont'd)

19.1 General Description (Cont'd)

(A) General (Cont'd)

BellSouth Line Information Data Base Access Service transports queries and responses to and from a customer's SPOI and a BellSouth Line Information Data Base Location; and between a BellSouth Line Information Data Base Location and the data base. BellSouth Line Information Data Base Access Service enables customers to receive responses to queries of data stored in the BellSouth Line Information Data Base solely for the purposes of facilitating call completion, billing, validation and to assist the customer in fraud detection and prevention. BellSouth Line Information Data Base Access Service may be provided as a shared arrangement, with customers billed separately for the transport and query functions. (M) (M) (M) (M) (M) (M) (C) (M) (C) (M) (C) (M) (T) (M) (T) (M) (T)

BellSouth LIDB customers must provide at least one Originating Point Code to the Telephone Company. The Originating Point Code serves as a customer identifier for purposes of billing BellSouth Line Information Data Base Common Transport, which carries the query from the BellSouth Line Information Data Base Location to the data base (Service Control Point - SCP), and for billing of the three query types, which provide response to a customer query. All BellSouth Line Information Data Base usage based rate elements will be billed to the customer on a per query basis. (M) (T) (M) (T) (M) (T) (M) (T) (M) (T) (M) (T) (M) (C) (M) (C) (M) (C) (D)

Customer must include the originating and terminating telephone numbers of the telephone call associated with its LIDB query as part of the message containing each LIDB query it sends to BellSouth. (N) (N) (N)

The data base consists of data and application software associated with an SCP. It is a transaction-oriented system accessible using Common Channel Signaling System 7 (CCS7) as set forth in 6.1.3.(A)(6)(e) preceding. The data required for processing customer queries are formatted as Transaction Capability Application part (TCAP) messages and are transported using the SS7 protocol for basic message transport. The Telephone Company will receive and respond to customer queries as defined in technical publications TR-NWT-000246, FR-NWT-000271, TR-TSV-000905 and TR-TSV-000954. (M) (M) (M) (M) (M) (M) (M) (M) (M) (M)

ACCESS SERVICE

19 - BellSouth Line Information Data Base Access Service (Cont'd)

19.2 Obligations of the Telephone Company

(A) General

The Telephone Company will specify the BellSouth Line Information Data Base Locations at which BellSouth Line Information Data Base Access Service is provided. Those locations are listed in the NATIONAL EXCHANGE CARRIER ASSOCIATION, INC. TARIFF F.C.C. NO. 4.

BellSouth Line Information Data Base Access Service is provided at the designated BellSouth Line Information Data Base Locations. The BellSouth Line Information Data Base Locations and the SCP will respond to queries received in the required signaling protocol for messages formatted in the American National Standards Institute specification of Signaling System No. 7 (ANSI SS7) protocol.

(B) Transport

Transmission facilities and transport terminations between the SPOI of the ordering customer and the BellSouth Line Information Data Base Location (provided as described in 6.1.3(C) preceding), and between the BellSouth Line Information Data Base Location and the Line Information Data Base represent two-way, diversified digital transmission paths from the customer SPOI to the SCP. This transmission path transports queries from the SPOI to the SCP and responses to the SPOI from the SCP in the Common Channel Signaling/Signaling System 7 protocol. The technical specifications for the interface required at the customer SPOI are provided in Technical Publication TR-TSV-000905. (C)

(C) Special Facilities Routing

The customer may request that the facilities used to provide BellSouth Line Information Data Base Access Service be specially routed. The regulations, rates and charges for Special Facilities Routing are set forth in Section 11 preceding.

(D) Design Layout Report

The Telephone Company will provide to the customer a description of BellSouth Line Information Data Base Access Service facilities. This information will be provided in the form of a Design Layout Report. The Design Layout Report will be provided only at the request of the customer, and will be provided at no charge. The Design Layout Report will be updated and reissued whenever the facilities provided for the customer's use are materially changed.

ACCESS SERVICE

19 - BellSouth Line Information Data Base Access Service

19.1 General Description

- (A) BellSouth Line Information Data Base Access Service provides a customer the ability to receive validation of billing information through query of data stored in the BellSouth Line Information Data Base.

BellSouth Line Information Data Base Access Service transports queries and responses to and from a customer's SPOI and a BellSouth Line Information Data Base Location; and between a BellSouth Line Information Data Base Location and the data base. BellSouth Line Information Data Base Access Service enables customers to receive responses to queries of data stored in the BellSouth Line Information Data Base for the purpose of validating billing information. BellSouth Line Information Data Base Access Service may be provided as a shared arrangement, with customers billed separately for the transport and query functions.

(D)
(D)
(D)
(D)
(D)

Customers purchasing validation of billing information must provide at least one Originating Point Code to the Telephone Company. The Originating Point Code serves as a customer identifier for purposes of billing BellSouth Line Information Data Base Common Transport, which carries the query from the BellSouth Line Information Data Base Location to the data base (Service Control Point - SCP), and BellSouth Line Information Data Base Access Validation, which provides the response to a customer query. Both BellSouth Line Information Data Base Common Transport and BellSouth Line Information Data Base Validation will be billed to the customer on a per query basis.

The data base consists of data and application software associated with an SCP. It is a transaction-oriented system accessible using Common Channel Signaling System 7 (CCS7) as set forth in 6.1.3.(A)(6)(e) preceding. The data required for processing customer queries are formatted as Transaction Capability Application part (TCAP) messages and are transported using the SS7 protocol for basic message transport. The Telephone Company will receive and respond to customer queries as defined in technical publications TR-NWT-000246, FR-NWT-000271, TR-TSV-000905 and TR-TSV-000954.

EFFECTIVE: NOVEMBER 2, 2002

ACCESS SERVICE

19 - BellSouth Line Information Data Base Access Service

19.1 General Description

(A) General

BellSouth Line Information Data Base (LIDB) Access Service provides a customer the ability to query and receive subscriber line data stored in BellSouth's LIDB that accommodates the customer's properly completing calls for a line subscriber and/or billing calls to a subscriber's line or calling card. (N)
(C)
(C)
(C)
(C)

LIDB data is made available via three service query types: (N)

1) Validation Service Query (N)

The Validation Service Query returns data needed to verify that a presented calling card is good for use to bill service(s) the customer provides to a line subscriber. Also provided are toll billing exception data associated with a subscriber line, which are needed to determine whether a line subscriber will accept collect and/or third number billing of calls. Validation Service also provides verification that the line to be charged is not a pay telephone. (N)
(N)
(N)
(N)
(N)
(N)
(N)

2) Originating Line Number Screening (OLNS) Service Query (N)

The OLNS Service Query returns data needed to facilitate the completion of calls originating from working telephone numbers. Data provided inform the customer which local exchange company (LEC, Account Owner) provides service to a line subscriber as well data reporting the local presubscribed interexchange carrier (LPIC) and/or presubscribed interexchange carrier (PIC), if any, of the originating subscriber line. (N)
(N)
(N)
(N)
(N)
(N)

OLNS also provides data that alerts the customer to unique call processing needs associated with a subscriber line. OLNS provides a service or equipment indicator (e.g., POTS, Hotel/Hospital, Inmate, PBX, etc.) and service and billing restrictions data associated with a subscriber line. (N)
(N)
(N)
(N)
(N)

3) GetData Service Query (N)

The GetData Service Query provides either or both of two data fields, depending upon the customer's query: 1) Account Owner data field, which reports which Telephone Company is providing dial tone to a particular local exchange line and/or 2) Regional Account Owner data field, which provides information about where to send billing records for service the customer renders to a line subscriber. GetData will provide access to BellSouth's end user data and to other Account Owners' data where authorized. (N)
(N)
(N)
(N)
(N)

20.30.1 BellSouth Virtual Expanded Interconnection Elements (Cont'd) (T)

Charges for a security escort are assessed in half-hour increments as either Basic, Overtime, or Premium Time charges. A request resulting in the dispatch of a Telephone Company employee at a time not consecutive with the employee's scheduled work period is subject to a minimum charge of three hours.

(H) Training

When collocator-provided/Telephone Company leased equipment (hardware and/or software) is identical to that already in use in the Telephone Company location:

No Training Charges Are Applicable

When collocator-provided/Telephone Company leased equipment (hardware and/or software) is not identical to that already in use in the Telephone Company location:

Charges as set forth in 20.31(F) as applicable. (T)

20.30.2 Access Service Elements

- (A) The access service elements, as set forth in Section 3, Carrier Common Line Access Service; Section 6, BellSouth SWA service; Section 9, BellSouth Directory Assistance; Section 16, Telecommunications Relay Service Transport; Section 18, Operator Service; and Section 19, BellSouth Line Information Data Base service, ordered and/or working in association with DS1/DS3 Switched Cross-Connect Service will be billed to and paid by the customer of record for the service involved, unless the BellSouth Virtual Expanded Interconnection customer request and/or agrees to be responsible for all charges. (T)
- (B) For BellSouth SWA service line or trunk activation charges, see Section 6.8.1(E) preceding. (T)

20 - BellSouth Virtual Expanded Interconnection (Cont'd)

20.30 Rate Regulations (Cont'd)

20.30.1 BellSouth Virtual Expanded Interconnection Elements (Cont'd)

(D) Cable Support Structure

The Cable Support Structure monthly recurring charge applies for the use of conduit from the point of interconnection to the cable vault or other central office entrance, and for entrance and riser cable rack space.

(E) Cross-Connect

A monthly recurring charge applies for the DS1/DS3 Cross-Connect element which consists of the cross-connect panel, cable racks, bay framework, jumpers and other supporting hardware.

The DS1/DS3 Cross-Connect element is designated as BellSouth SWA or Special Access (a.k.a. BellSouth SPA) depending on the type of service to which it cross connects. The Switched DS1/DS3 Cross-Connect is subject to the jurisdictional report requirements as set forth in 2.3.10 preceding.

(T)1

Nonrecurring charges for the DS1/DS3 Cross-Connect are assessed on a "First" and "Additional" basis.

(F) Floor Space

Floor Space consists of two monthly recurring rate elements that apply as follows:

Per Square Foot - The Per Square Foot element applies for the floor space required to provision the BellSouth Virtual Expanded Interconnection arrangement and includes heat, ventilation, and air conditioning (HVAC), lighting, and AC power.

(T)
(T)

Per Ampere - The Per Ampere element consists of two separate -48 volts direct current feeds (A&B) with battery back-up and applies per ampere for the equipment maximum power requirement.

(G) Security Escort

A security escort is provided to a collocator whenever the collocator, or approved agent, desires access to the entrance manhole or to inspect the collocator-provided/Telephone Company leased terminal transmission equipment.

20.30 Rate Regulations (Cont'd)

20.30.1 BellSouth Virtual Expanded Interconnection Elements (Cont'd) (T)

(A) Application Fee (Cont'd)

An Application Fee is required with each BellSouth Virtual Expanded Interconnection arrangement application submitted per location. If more than one BellSouth Virtual Expanded Interconnection arrangement is ordered at the same location on the initial BellSouth Virtual Expanded Interconnection arrangement application, then only one Application Fee will apply. A subsequent application for an additional arrangement within the same location must be submitted with another Application Fee. (T)
(T)
(T)
(T)
(T)

(B) Cable Installation Charges

The Cable Installation Charge applies for each BellSouth Virtual Expanded Interconnection cable ordered within a location. Cable installation involves activities associated with pulling the collocator-provided/Telephone Company leased fiber cable from the interconnection point to the BellSouth Virtual Expanded Interconnection terminating equipment or the vault, installing collocator-provided/Telephone Company leased fire retardant riser cable, and splicing the entrance fiber cable to the riser cable. (T)
(T)
(T)

Payment of the Cable Installation Charge must be made prior to the Telephone Company commencing work on the BellSouth Virtual Expanded Interconnection arrangement work order. The Cable Installation Charge will not apply on subsequent BellSouth Virtual Expanded Interconnection arrangement orders within the same location for the same BellSouth Virtual Expanded Interconnection collocator if the collocator and Telephone Company jointly determine that efficient cable facilities exist to accommodate the subsequent BellSouth Virtual Expanded Interconnection arrangement(s). 20.30 Rate Regulations

20.30.1 BellSouth Virtual Expanded Interconnection Elements

Regulations governing the application of BellSouth Virtual Expanded Interconnection rates and charges are described below. Rates and charges for each element are specified in 20.31 following.

(T)

(A) Application Fee

An Application Fee in the amount specified in 20.31 following must be submitted with the collocater's application for BellSouth Virtual Expanded Interconnection service. The first-come, first-served policy of processing applications for BellSouth Virtual Expanded Interconnection arrangements will be determined based upon the order of receipt of applications for BellSouth Virtual Expanded Interconnection along with the Application Fee. The Application Fee will be used for design and planning activities which include an engineering record search for conduit, rack, and floor space availability and a determination of requirements for the requested BellSouth Virtual Expanded Interconnection design.

20.26 Liability and Damages (Cont'd)

- (F) The collocator shall be responsible for the actions of all persons under its control when working in a Telephone Company manhole, or other point of interconnection outside of the BellSouth Virtual Expanded Interconnection location. (T)
- (G)(1) If the interconnection floor space or any part thereof shall be damaged by fire or other casualty, the Telephone Company shall give immediate notice thereof to the collocator and the provisions of this tariff shall continue in full force and effect except as hereinafter set forth. (T)
- (2) If the interconnection floor space is partially damaged or rendered partially unusable by fire or other casualty not caused by the collocator, the damages thereto shall be repaired by and at the expense of the Telephone Company. The interconnection floor space fee, until such repair shall be substantially completed, shall be reduced from the day following the casualty according to the portion of the interconnection space and/or associated cable and conduit spaces which are rendered unusable.
- (3) If the interconnection floor space, cable space, or conduit space is totally damaged or rendered wholly unusable by fire or other casualty not caused by the collocator, then the occupancy fees shall be paid up to the time of the casualty and thenceforth shall cease until the date when the space shall have been repaired and restored by the Telephone Company, subject to the Telephone Company's right to elect not to restore the same as hereinafter provided.
- (4) If the interconnection floor space, cable space, or conduit space is rendered wholly unusable or if the building shall be so damaged that the Telephone Company shall decide to demolish it or not to rebuild it, then, in any of such events, the Telephone Company may elect to terminate service under this tariff by written notice to the collocator given within ninety (90) days after such fire or casualty specifying a date for the cessation of service, which date shall not be more than sixty (60) days after the giving of such notice, and upon the date specified in such notice service under this tariff shall cease and the BellSouth Virtual Expanded Interconnection arrangement with the collocator shall forthwith be terminated and the collocator-provided/Telephone Company leased remaining equipment removed and returned to the collocator without prejudice however to the Telephone Company's rights and remedies (T)

(B) (Cont'd)

to the equipment or facilities of another BellSouth Virtual Expanded Interconnection occupying space in a Telephone Company location(s), or by any act or omission of the Telephone Company, its employees, agents, former or striking employees, or contractors, in connection therewith. (T)

The collocator shall indemnify, defend, and save harmless the Telephone Company from and against any and all losses, claims, demands, causes of action, damages and costs, including but not limited to attorney's fees which may arise out of or be caused by the collocator's presence in the BellSouth Virtual Expanded Interconnection location and/or by acts of the collocator, its employees, agents, or contractors. The collocator shall indemnify, defend, and save harmless the Telephone Company from and against any and all damages, costs and expense of relocating conduit systems, when such relocation is necessitated by the BellSouth Virtual Expanded Interconnection arrangement and/or by acts of the collocator, its employees, agents or contractors. (T)

(D) In no event shall the Telephone Company or any of its directors, officers or employees or agents be liable for any loss of profit or revenue by the collocator or for any loss of AC or DC power, HVAC interruptions, consequential, incidental, special, punitive or exemplary damages incurred or suffered by the collocator, even if the Telephone Company has been advised of the possibility of such loss or damage. The collocator shall indemnify, defend, and hold harmless the Telephone Company, its directors, officers and employees, servants, agents, affiliates and parents, from and against any and all claims, cost, expenses or liability arising out of the installation and operation of the collocator-provided/Telephone Company leased facilities and equipment within the location.

(E) The collocator represents, warrants and covenants that it shall not cause or permit any other party to cause any environmental conditions in, at or affecting the BellSouth Virtual Expanded Interconnection location which violate any federal, state or local law, ordinance, rule or regulation. The collocator shall indemnify, defend, and hold harmless the Telephone Company from any and all liability, damage claim or cost of any kind, including reasonable attorney's fees, resulting from or arising out of any breach of the foregoing sentence. (T)

20.25 Maintenance

Except in emergency situations, the collocator-provided/Telephone Company leased fiber optic cable facilities and terminating transmission equipment will be maintained/repared only upon request of the BellSouth Virtual Expanded Interconnection collocator. In an emergency, the Telephone Company will use reasonable efforts to notify the BellSouth Virtual Expanded Interconnection collocator, but nevertheless may perform such maintenance/repair as deemed necessary without prior notification or request. When initiating maintenance/repair requests on equipment, the collocator must provide the Telephone Company with the associated circuit identifications and specific location of the BellSouth Virtual Expanded Interconnection equipment, as well as a detailed description of the trouble. Charges for maintenance/repair performed upon request from, or on behalf of, the BellSouth Virtual Expanded Interconnection collocator will be billed to the collocator on a time sensitive basis as described in Section 13.3.1 preceding. No charges will be assessed to the BellSouth Virtual Expanded Interconnection collocator for maintenance if said maintenance is required as a result of negligence or willful misconduct on the part of the Telephone Company, or from incidental damage resulting from Telephone Company activities. The collocator is responsible for providing equipment required for maintenance/repair spares under the terms of paragraph 20.18(A).

(T)

(T)

(T)

(T)

(T)

(T)

All maintenance/repair on BellSouth Virtual Expanded Interconnection terminating transmission equipment will be performed by the Telephone Company.

(T)

20.26 Liability and Damages

(A) The Telephone Company reserves to itself, its successors and assigns, the right to utilize the space within its location(s) in such a manner as will best enable it to fulfill its own service requirements. The Telephone Company shall not be liable to the collocator for physical damage to the collocator-provided/Telephone Company leased facilities or equipment occupying a Telephone Company location unless caused by the negligence or willful misconduct of the Telephone Company. In such event, the liability of the Telephone Company shall be limited to the reasonable cost of repair/replacement of damaged facilities or equipment. The Telephone Company shall have no liability whatsoever to a collocator or customer of the collocator for lost revenues or profits occasioned by any interruption of the collocator's service or interference with the operation of the collocator-provided/Telephone Company leased facilities in a Telephone Company location(s).

(B) The collocator shall indemnify, defend, and save harmless the Telephone Company from and against any and all losses, claims, demands, causes of action, and costs, including attorneys' fees, whether suffered, made, instituted, or asserted by the collocator or by any other party or person for damages to property and injury or death to persons, including payments made under any Workers' Compensation Law or under any plan for employees' disability and death benefits, which may arise out of or be caused by the installation, repair, use, or removal of BellSouth Virtual Expanded Interconnection collocator-provided/Telephone Company leased equipment or facilities, or by their proximity

20.22 Training

If a collocator selects terminating transmission equipment hardware and/or software which is not currently in use in the Telephone Company location where BellSouth Virtual Expanded Interconnection will be provided, the collocator will be responsible for payment of the charges as set forth in 20.31(F) following, for any necessary training for Telephone Company personnel needed to install and repair said equipment. Additionally, the collocator will be responsible for payment of any applicable tuition fees associated with said training. (T)

In the event that the collocator does not provide the necessary training to enable Telephone Company personnel to repair said equipment, the Telephone Company may call a certified vendor to make repairs of said equipment. The collocator will reimburse the Telephone Company for any charges submitted by the certified vendor for repair of said equipment. In addition, charges for security escort will apply as set forth in 20.31(H) following.

20.23 Inspections

A BellSouth Virtual Expanded Interconnection collocator shall call to schedule a time to enter the BellSouth Virtual Expanded Interconnection location(s) for the purpose of inspecting the terminating transmission equipment dedicated for its use. A Telephone Company security escort will accompany the BellSouth Virtual Expanded Interconnection collocator during said inspections at the expense of the collocator. Security escort rates are as set forth in 20.31(G) following. (T)

20.20 Service Application (Cont'd)

- (G) The Telephone Company's engineering and other labor time associated with establishing and maintaining a BellSouth Virtual Expanded Interconnection Service arrangement will be billed under the provisions of 13.1 and 13.2 preceding. (T)
- (H) The collocator will contract directly with its chosen certified vendor for installation. The Telephone Company will retain project management responsibility and authority related to the installation work done in the central office (i.e., decisions as to specific location of the equipment bay, termination panel appearance, assignments, etc.). Equipment installation includes, but is not limited to, assembly, floor mounting, connecting power, connecting optical and metallic interfaces, connecting monitoring equipment, turn-up, acceptance testing, stenciling, updating central office records and any other task that may be required for compliance with the BellSouth installation standards as contained in TR-73503. The Telephone Company, in cooperation with the chosen certified vendor, will determine the installation interval. The collocator and its chosen vendor will work in close cooperation with Telephone Company representatives having project management responsibility and will comply with the installation standards specified in TR-73503.
- (I) A collocator agrees to meet with the Telephone Company on an as needed basis to review the design and work plans and schedules for the installation of the collocator-provided/Telephone Company leased terminating transmission equipment and facilities.

20.21 Service Activation

- (A) The Telephone Company will notify the collocator in writing upon completion of the installation work and prior to activating the BellSouth Virtual Expanded Interconnection arrangement. (T)
- (B) The Telephone Company will provide the BellSouth Virtual Expanded Interconnection collocator with the circuit identifications associated with the collocator-provided/Telephone Company leased terminating transmission equipment as well as specific location of the equipment, e.g., BellSouth Virtual Expanded Interconnection location, bay location, shelf, etc., at the time of installation. (T)
- (C) The Telephone Company will utilize existing test equipment, or the collocator-provided/Telephone Company leased unique test equipment, for acceptance and repair in cooperation with the BellSouth Virtual Expanded Interconnection collocator. (T)

20.20 Service Application (Cont'd)

- (B) The Telephone Company will process applications for BellSouth Virtual Expanded Interconnection arrangement on a first-come, first-serve basis by location as determined through the receipt of the application fee. (T)
(T)
- (C) The Telephone Company will accept letters of agency in conjunction with an application for BellSouth Virtual Expanded Interconnection. (T)
- (D) Upon receipt of the application fee, the Telephone Company will conduct the following design and planning activities:
 - (1) engineering record search and review to determine availability of conduit, rack, floor space and multiple entry points.
 - (2) determination of requirements of the requested BellSouth Virtual Expanded Interconnection design. (T)
(T)
 - (3) administrative activities required to process the application.
- (E) Once the Telephone Company has completed the design and planning activities, the collocator will be informed of the floor space and power requirements. At this time the Telephone Company will provide to the collocator a list of vendors certified to perform equipment installations.
- (F) A collocator shall have thirty (30) days from receipt of the information to place a firm order.

20.19 Limitations (Cont'd)

- (C) The Telephone Company will not interconnect facilities between two or more different collocators within the same BellSouth Virtual Expanded Interconnection location.
- (D) BellSouth Virtual Expanded Interconnection arrangements will be DS1 or DS3 electrical interconnections.
- (E) The BellSouth Virtual Expanded Interconnection collocator may interconnect at the DS3 level with the following Telephone Company interstate services:

- LightGate service (a.k.a. BellSouth SPA Point to Point Network) local channel or interoffice channel via a LightGate service (a.k.a. BellSouth SPA Point to Point Network) DS3 Central Office Channel Interface
- SMARTRing service (a.k.a. BellSouth SPA Dedicated Ring) via a SMARTRing service (a.k.a. BellSouth SPA Dedicated Ring) Central Office Node DS3 Channel Interface
- 28 DS1 Channelization System
- BellSouth SWA service
- SMARTPath DS3 Transport service (a.k.a. BellSouth SPA DS3 Shared Ring)
- SMARTGate service (a.k.a. BellSouth SPA Managed Shared Ring Network)
- FlexServ Port in a Digital Cross Connect System

(N)

- (F) The BellSouth Virtual Expanded Interconnection collocator may interconnect at the DS1 level with the following Telephone Company interstate services:

- DS1 local channel or interoffice channel
- DS1 Basic Channelization System
- FlexServ (a.k.a. BellSouth SPA Customer Reconfiguration) Port in a Digital Cross-Connect System
- DS1 Central Office Channel Interface associated with LightGate (a.k.a. BellSouth SPA Point to Point Network) or SMARTRing services (a.k.a. BellSouth SPA Dedicated Ring)
- BellSouth SWA Service
- SMARTPath service (a.k.a. BellSouth SPA DS1 Shared Ring)
- SMARTGate service (a.k.a. BellSouth SPA Managed Shared Ring Network)

20.20 Service Application

- (A) A collocator shall complete and provide to the Telephone Company a written application requesting a BellSouth Virtual Expanded Interconnection service arrangement and an application fee per request, per location. Details on the specific requirements of the requested BellSouth Virtual Expanded Interconnection arrangement, including interconnect drawings technical specifications, monitor and control design and other equipment related documentation, must be provided with the written application.

20.18 Regulations (Cont'd)

- (D) The Telephone Company will designate the point of interconnection in proximity to the location building, which is normally an entrance manhole. The Telephone Company reserves the right to prohibit all equipment and facilities, other than cable, within its entrance manholes. No splicing will be permitted in the entrance manhole. The collocater must provide a length of underground fiber optic cable in the entrance manhole specified by the Telephone Company which is of sufficient length to be pulled through the conduit and into the cable vault splice locations. The collocater is responsible for placement of the fiber optic facility within the manhole and for the maintenance of the fiber optic cable(s). Before placing the fiber optic facility in the manhole, the collocater will contact the Telephone Company for instructions. The collocater agrees to comply with the Telephone Company's safety and security rules. Access to the manhole is covered by the terms and conditions specified by the Telephone Company. (T)

The Telephone Company will pull the collocater-provided/Telephone Company leased fiber cable from the interconnection point to the cable vault where the cable will be spliced to collocater-provided/Telephone Company leased fire retardant riser cable which the Telephone Company will install.

- (E) The BellSouth Virtual Expanded Interconnection collocater must provide the terminating transmission equipment that the Telephone Company will lease and use pursuant to Section 20.18(A) preceding to provision the BellSouth Virtual Expanded Interconnection arrangement. The equipment must comply with the Bellcore Network Equipment Building System (NEBS) General Equipment Requirements (TR-NWT-000063); National Electrical Code standards, and meet the minimum Operational System Modification for Intelligent Network Elements (OSMINE) requirements of coding for the TIRKSR System. This minimum includes Human Equipment Catalog Item Group (HECIG), Equipment Catalog Item Group (ECIG) processing code, (T)

20 - BellSouth Virtual Expanded Interconnection (Cont'd) (T)

20.17 Service Description

BellSouth Virtual Expanded Interconnection service provides for location interconnection of collocator-provided/Telephone Company leased fiber optic facilities to Telephone Company interstate BellSouth SWA and Special Access (a.k.a. BellSouth SPA) services. BellSouth Virtual Expanded Interconnection service for switched access is provided at designated central offices, tandems, and remote nodes/switches (e.g., locations). BellSouth Special Access Virtual Expanded Interconnection is available only at designated central offices. Under BellSouth Virtual Expanded Interconnection, a collocator provides fiber optic cable up to a Telephone Company-designated interconnection point outside of the location, such as a manhole. The collocator will provide the entrance fiber extending between the interconnection point and the location. The Telephone Company will lease the entrance fiber under the provisions of 20.18(A) following, and will install the fiber into the location for connection to the BellSouth Virtual Expanded Interconnection collocator-provided/Telephone Company leased transmission equipment. In addition, if multiple entry points are available, and the collocator so desires, multiple entry points will be provided to the collocator. A BellSouth Virtual Expanded Interconnection arrangement may interconnect with Telephone Company interstate BellSouth SWA and Special Access (a.k.a. BellSouth SPA) DS1/DS3 level high capacity services within the location. (T)

Microwave facilities, in lieu of fiber facilities, may be used for interconnection where they may reasonably be provided. Upon receipt of a request for microwave interconnection, BellSouth will negotiate the arrangements and file the appropriate rates and regulations for the service. (T)

BellSouth Virtual Expanded Interconnection will be made available subject to the availability of space and facilities in each Telephone Company location. BellSouth's central office, tandem and remote node switch site designations are listed in the National Exchange Carriers Association (NECA) Tariff F.C.C. No. 4. (T)

General regulations, rates and charges applicable to all BellSouth Virtual Expanded Interconnection arrangements are contained in this tariff. (T)

20.18 Regulations

- (A) In order to ensure the compatibility of the transmission capabilities of the facilities and equipment used in the provision of BellSouth Virtual Expanded Interconnection, such equipment and facilities, including the entrance fiber, associated riser cable/fiber, terminal transmission equipment, plug-ins, software, unique tools and test equipment will be provided by the collocator. The collocator agrees to lease to BellSouth all the equipment and support structure components required to provision and maintain/repair BellSouth Virtual Expanded Interconnection on an ongoing basis, for the nominal sum of one dollar. - 20 - BellSouth Expanded Interconnection Service (Cont'd) (T)
- 20.3 BellSouth Expanded Interconnection Service Cross Connects (Cont'd) (N)
- 20.3.1 General (Cont'd) (N)
- (C) Cross Connects will be ordered on the same ASR as the service being cross-connected. All ASRs must be complete and accurate before the Company will initiate the provisioning process. (N)
(N)
(N)
- (D) Nonrecurring charges for the BellSouth Expanded Interconnection Service Cross Connects are assessed on a "First" and "Additional" basis. (M)(T)
(M)
- 20.3.2 BellSouth Virtual Expanded Interconnection Cross Connects (M)(T)
- (A) A monthly recurring charge applies for the BellSouth Virtual Expanded Interconnection Cross Connect element that consists of the cross connect panel, cable racks, bay framework, jumpers and other supporting hardware. (M)(T)
(M)(T)
(M)
- (B) The BellSouth Virtual Interconnection Cross Connect element is designated as BellSouth SWA or Special Access (a.k.a. BellSouth SPA) depending on the type of service to which it cross connects. (M)(T)
(M)
(M)
- (C) The BellSouth SWA Cross-Connect element is subject to the jurisdictional report requirements as set forth in Section 2.3.10 of this Tariff. (M)(T)

ACCESS SERVICE

- 20 - BellSouth Expanded Interconnection Service (Cont'd) (T)
- 20.1 BellSouth Virtual Expanded Interconnection (N)
- 20.1.14 Rate Regulations (Cont'd) (N)
- 20.1.14.1 BellSouth Virtual Expanded Interconnection Elements (Cont'd) (N)
- (C) Cable Support Structure (M)(T)
- The Cable Support Structure monthly recurring charge applies for the use of conduit from the point of interconnection to the cable vault or other central office entrance, and for entrance and riser cable rack space. (M)
(M)
(M)
- (D) Cross-Connects (M)(T)
- The Telephone Company's rate regulations associated with establishing and maintaining Cross Connects are as set forth in 20.3 following and will be billed as set forth in 20.4 following. (N)
(N)
(N)
- (E) Floor Space (M)(T)
- Floor Space consists of two monthly recurring rate elements that apply as follows: (M)
(M)
- Per Square Foot - The Per Square Foot element applies for the floor space required to provision the BellSouth Virtual Expanded Interconnection arrangement and includes heat, ventilation, and air conditioning (HVAC), lighting, and AC power. (M)
(M)
(M)
(M)
- Per Ampere - The Per Ampere element consists of two separate -48 volts direct current feeds (A&B) with battery back-up and applies per ampere for the equipment maximum power requirement. (M)
(M)
(M)
- (F) Security Escort (M)(T)
- A security escort is provided to a collocator whenever the collocator, or approved agent, desires access to the entrance manhole or to inspect the collocator-provided/Telephone Company leased terminal transmission equipment. (M)
(M)
(M)
(M)
- Charges for a security escort are assessed in half-hour increments as either Basic, Overtime, or Premium Time charges. A request resulting in the dispatch of a Telephone Company employee at a time not consecutive with the employee's scheduled work period is subject to a minimum charge of three hours. (M)

ACCESS SERVICE

21 - Fast Packet Access Services

21.6 BellSouth Network Visibility Service (Cont'd)

21.6.5 Rate Categories

The following rate categories apply to BellSouth NVS:

- (A) Service Establishment Charge
The Service Establishment Charge is a nonrecurring charge which applies per customer account. This charge covers the initial establishment and set-up of the customer account in the BellSouth NVS database. A username(s) and password(s) will be assigned for use by the customer in accessing their account. At the time the account is established, a customer may also choose to establish sub accounts.
- (B) Fault Management and On Demand Statistics
A monthly charge applies for each Network Interface/Connection in the customer's network with BellSouth NVS capability. A nonrecurring charge is applicable per Network Interface/Connection at the time of installation.
- (C) Fault Management, On Demand Statistics and Performance Reports
A monthly charge applies for each Network Interface/Connection in the customer's network with BellSouth NVS capability. A nonrecurring charge is applicable per Network Interface/Connection at the time of installation.
- (D) Subsequent Modification Charge
The Subsequent Modification Charge is a nonrecurring charge which applies per Network Interface/Connection when a BellSouth NVS customer requests that existing BellSouth NVS Network Interfaces/Connections or PVCs be modified. Examples of this charge include change of customer name and movement between packages. This charge is not applicable:
 - when a new PVC is added to an existing BellSouth NVS Network Interface/Connection and BellSouth NVS is requested for the new PVC, or
 - for a request to change a password.
- (E) Management Access Interface
All customers must have a Management Access Interface. This connection allows the customer to monitor their network. A monthly charge applies for each Web Interface and each Remote Message Interface; a nonrecurring charge is applicable per Web Interface and per Remote Message Interface at the time of installation. A Security Card described below is required for web access. See section 7.5.18 preceding for the rates and charges for a Management Access Interface using a dial or dedicated access option.
 - Security Card – The Security Card charge is a nonrecurring charge applicable for the issuance of the initial card or for the issuance of additional cards for additional users or to replace a lost, damaged or expired card.

EFFECTIVE: NOVEMBER 22, 2002

ACCESS SERVICE

21.6 BellSouth Network Visibility Service (Cont'd) (N)

21.6.5 Rate Categories (N)

The following rate categories apply to BellSouth NVS: (N)

- (A) Service Establishment Charge (N)
The Service Establishment Charge is a nonrecurring charge which applies (N)
per customer account. This charge covers the initial establishment and (N)
set-up of the customer account in the BellSouth NVS database. A (N)
username(s) and password(s) will be assigned for use by the customer in (N)
accessing their account. At the time the account is established, a (N)
customer may also choose to establish sub accounts. (N)
- (B) Fault Management and On Demand Statistics (N)
A monthly charge applies for each Network Interface/Connection in the (N)
customer's network with BellSouth NVS capability. A nonrecurring (N)
charge is applicable per Network Interface/Connection at the time of (N)
installation. (N)
- (C) Fault Management, On Demand Statistics and Performance Reports (N)
A monthly charge applies for each Network Interface/Connection in the (N)
customer's network with BellSouth NVS capability. A nonrecurring (N)
charge is applicable per Network Interface/Connection at the time of (N)
installation. (N)
- (D) Subsequent Modification Charge (N)
The Subsequent Modification Charge is a nonrecurring charge which (N)
applies per Network Interface/Connection when a BellSouth NVS customer (N)
requests that existing BellSouth NVS Network Interfaces/Connections or (N)
PVCs be modified. Examples of this charge include change of customer (N)
name and movement between packages. This charge is not applicable: (N)
- when a new PVC is added to an existing BellSouth NVS (N)
Network Interface/Connection and BellSouth NVS is requested (N)
for the new PVC, or (N)
- for a request to change a password. (N)
- (E) Management Access Interface (N)
All customers must have a Management Access Interface. This connection (N)
allows the customer to monitor their network. A monthly charge applies (N)
for each web interface. A nonrecurring charge is applicable per web (N)
access at the time of installation. A Security Card described below is (N)
required for each web access. See section 7.5.18 preceding for the (N)
rates and charges for a dial or dedicated access option. (N)
- Security Card - The Security Card charge is a nonrecurring (N)
charge applicable for the issuance of the initial card or (N)
for the issuance of additional cards for additional users (N)
or to replace a lost, damaged or expired card. (N)

21 - Fast Packet Access Services

21.6 BellSouth Network Visibility Service (Cont'd)

21.6.2 Maintenance

In order to maintain the quality of BellSouth NVS, the Company reserves the right to perform preventive maintenance and software updates. This could result in BellSouth NVS being unavailable during the time period between Midnight and 3:00 A.M. Eastern Time on Sundays. In addition, preventive maintenance may be performed on the XAFRS (a.k.a. BellSouth Exchange Access Frame Relay Service), XAATMS, MSFRS and MSATMS circuits being monitored by NVS during the time period between 2:00 A.M. and 4:00 A.M. Eastern Time on the specific days as set forth by state in the following chart. BellSouth NVS will be unable to view these circuits while preventive maintenance is being performed. The Telephone Company only expects to utilize this maintenance window on the average of once a quarter. However, the Telephone Company reserves the right to perform maintenance at any time at its discretion that it believes such maintenance is necessary. The Telephone Company will make a reasonable effort to provide notice to those customers likely to be affected by such maintenance work.

<u>State</u>	<u>Scheduled Maintenance Days</u>
Alabama	Sunday and Monday
Florida	Sunday and Wednesday
Georgia	Sunday and Friday
Kentucky	Sunday and Monday
Louisiana	Sunday and Tuesday
Mississippi	Sunday and Tuesday
North Carolina	Sunday and Saturday
South Carolina	Sunday and Saturday
Tennessee	Sunday and Thursday

21.6.3 Minimum Period of Service

The minimum period of service is one month.

21.6.4 Rate Regulations

- A. Rates and charges are specified in 21.6.6 following for BellSouth NVS. (T)
Unless specified otherwise, BellSouth NVS is available for use with the Fast Packet Savings Plan subject to the regulations provided in 2.4.8.(F) preceding.
- B. The rates and charges set forth for BellSouth NVS provide for the (T)
furnishing of service where suitable facilities are available.

EFFECTIVE: NOVEMBER 22, 2002

ACCESS SERVICE

21 - Fast Packet Access Services

21.6 BellSouth Network Visibility Service (Cont'd) (N)

21.6.1 General Description (Cont'd) (N)

(C) Performance Reports (Cont'd) (N)

Historical Performance Reports will baseline historic network performance, trend future performance and highlight network performance problems. The following selection of reports is available: (N)

- (1) Network Summary Report – Provides an overview of the customer's network performance in terms of Total Frames/Cells Transmitted and Received, Percent Total Utilization, Total Frames/Cells Discarded, and Percent Frames/Cells Discarded of Total Frames/Cells Transmitted and Received. (N)
- (2) Forecast Report – Provides the Network Interfaces/Connections or PVCs that are projected to exceed customer specific thresholds of Utilization and Congestion. (N)
- (3) Network Interface Performance Report – Provides the Network Performance Level on a customer selectable interface (Network Interface/Connection or PVC). (N)
- (4) Capacity Planning Report – Provides the top ten over-utilized and top ten under-utilized interfaces (Network Interface/Connection or PVC). (N)
- (5) Threshold Exceptions Report – Provides a daily report on the top ten interfaces that exceed a customer selectable threshold parameter. These parameters are Input Utilization, Output Utilization, Incoming Congestion, Outgoing Congestion, In Discards, and Out Discards. (N)
- (6) Top Ten Report – Provides a daily report of the top ten interfaces with the highest volumes and the worst Network Performance Level. It also specifies the top ten interfaces with the greatest change in both volume and Network Performance Level. (N)

EFFECTIVE: NOVEMBER 22, 2002

ACCESS SERVICE

21 - Fast Packet Access Services

21.6 BellSouth Network Visibility Service (Cont'd) (N)

21.6.1 General Description (Cont'd) (N)

BellSouth NVS is available in two packages; 1) Fault Management and On Demand Statistics or 2) Fault Management, On Demand Statistics and Performance Reports. All network interfaces/connections within a customer's account must be under the same package. If a customer desires to have both packages, a separate account must be established for each package type. Following is a description of the options available for BellSouth NVS: (N)

(A) Fault Management (N)

BellSouth NVS provides the ability to monitor fault and alarm information as network events occur. If a BellSouth network event results in automatic rerouting of customer owned PVCs on a Network Interface/Connection within the BellSouth Fast Packet network, such that those PVCs are not service impacted, then BellSouth will not send PVC events to the customer. The following Fault Management features will be available on a customer and sub-network basis: (N)

- BellSouth will provide to the customer, in near real time, all events, faults, and network alarms on any Network Interface/Connection or PVC. (N)
- The customer can determine the severity level of alarms displayed and suppress the alarms they do not wish to view. (N)

(B) On Demand Statistics (N)

BellSouth NVS provides customers statistics for each Network Interface/Connection and PVC on a customer and sub-network basis. (N)

(C) Performance Reports (N)

BellSouth NVS provides customers network performance reports on their BellSouth Fast Packet network. Customers have the capability of requesting performance reports for interfaces. (Interfaces are defined as Network Interfaces/Connections and PVCs). BellSouth NVS provides a measure of the level of network performance of a customer's network and individual interfaces that is called the Network Performance Level. The Network Performance Level components include Incoming Utilization, Outgoing Utilization, Discarded Frames/Cells and Congestion. The Network Performance Level is used in several reports to provide a weighted performance measure taking into account all the performance parameters mentioned above. (N)

EFFECTIVE: NOVEMBER 22, 2002

ACCESS SERVICE

21 - Fast Packet Access Services

21.6 BellSouth Network Visibility Service (Cont'd) (N)

21.6.1 General Description (Cont'd) (N)

Access to BellSouth NVS is via a Web interface. A dial or dedicated method described in section 7.4.12, FlexServ service (a.k.a. BellSouth SPA Customer Reconfiguration), may also be used to access NVS. For security reasons, customers are required to identify themselves via a username and password. The username and password are assigned at the time the account is established. Following is a description and requirements for each type of access: (N)

1. Web Interface - This interface allows customers to access BellSouth NVS via the Web using a standard web browser. This type of access requires a Security Card. (N)

Security Card - This card provides the customer a unique password identification code which will electronically change periodically. (N)

If the customer has purchased a Security Card in conjunction with another feature or service offered by BellSouth, that Security Card may also be used in conjunction with NVS. It is the customer's responsibility to notify BellSouth of an existing Security Card so BellSouth can ensure that the card is validated for multiple features and/or services. (N)

2. Dial Interface - See section 7.4.12 (N)

3. Dedicated Interface - See section 7.4.12 (N)

The customer is responsible for providing and maintaining all terminal equipment necessary to access BellSouth NVS. (N)

A customer may subscribe to BellSouth NVS on a monthly basis. An account is established which will include the XAFRS (a.k.a. BellSouth Exchange Access Frame Relay Service) and XAATMS Network Interfaces and the MSFRS and MSATMS Connections designated by the customer to have BellSouth NVS capability. Customers may choose to subscribe to BellSouth NVS for all Network Interfaces/Connections in their BellSouth Fast Packet network or choose BellSouth NVS for only a portion. (N)

ACCESS SERVICE
21 - Fast Packet Access Services

21.6 BellSouth Network Visibility Service (Cont'd)

21.6.1 General Description (Cont'd)

Access to the BellSouth NVS graphical interface is available via a Web Interface; alternatively, a dial or dedicated method described in section 7.4.12, BellSouth SPA CNM - FlexServ Service may also be used to access the NVS graphical interface. Additionally, NVS may be accessed via a Remote Message Interface for the collection of raw data. For security reasons, customers are required to identify themselves via a username and password. The username and password are assigned at the time the account is established. Following are descriptions and requirements for each type of Management Access Interface: (C)

1. Web Interface - This interface allows customers to access the BellSouth NVS graphical interface via the Web using a standard web browser. This type of access requires a Security Card.

Security Card - This card provides the customer a unique password identification code which will electronically change periodically.

If the customer has purchased a Security Card in conjunction with another feature or service offered by BellSouth, that Security Card may also be used in conjunction with NVS. It is the customer's responsibility to notify BellSouth of an existing Security Card so BellSouth can ensure that the card is validated for multiple features and/or services.

2. Dial Interface access to the BellSouth NVS graphical interface - See section 7.4.12
3. Dedicated Interface access to the BellSouth NVS graphical interface - See section 7.4.12
4. Remote Message Interface - This interface will allow SSH-IP connectivity to BellSouth NVS from other compatible Network Management systems for the collection of raw data. The customer must have SSH access to the NVS platform. Connectivity must be via a Frame Relay PVC to the Company network. Technical details and limitations on the Remote Message Interface can be found in BellSouth Technical Reference TR-73587.

The customer is responsible for providing and maintaining all terminal equipment necessary to access BellSouth NVS.

A customer may subscribe to BellSouth NVS on a monthly basis. An account is established which will include the XAFRS (a.k.a. BellSouth Exchange Access Frame Relay Service) and XAATMS Network Interfaces and the MSFRS and MSATMS Connections designated by the customer to have BellSouth NVS capability. Customers may choose to subscribe to BellSouth NVS for all Network Interfaces/Connections in their BellSouth Fast Packet network or choose BellSouth NVS for only a portion.

EFFECTIVE: NOVEMBER 22, 2002

ACCESS SERVICE

21 - Fast Packet Access Services

21.6 BellSouth Network Visibility Service (N)

21.6.1 General Description (N)

BellSouth Network Visibility Service (NVS) is available on an optional basis as a feature of the following Fast Packet Access Services: (N)

- Exchange Access Frame Relay Service (XAFRS) (a.k.a. BellSouth Exchange Access Frame Relay Service) described in 21.1 (N)
- BellSouth Managed Shared Frame Relay Service (MSFRS) described in 21.4 (N)
- BellSouth Exchange Access Asynchronous Transfer Mode Service (XAATMS) described in 21.3 (N)
- BellSouth Managed Shared Asynchronous Transfer Mode Service (MSATMS) described in 21.5 (N)

BellSouth NVS is a Customer Network Management (CNM) tool that provides customers a view into their BellSouth Fast Packet network for monitoring and trouble shooting purposes. The following BellSouth NVS options are available for XAFRS (a.k.a. BellSouth Exchange Access Frame Relay Service), XAATMS, MSFRS and MSATMS: Fault Management, On Demand Statistics and Performance Reports. (N)

BellSouth NVS supports hierarchical names. For example, a customer defines an overall network name (usually the customer name) and then may choose to establish multiple sub-network names. A maximum of five hierarchical tiers are available (the overall network plus four sub-network tiers). (N)

ACCESS SERVICE

21 - Fast Packet Access Services

21.5 Managed Shared ATM Service (MSATMS) (Cont'd)

21.5.10 Rates and Charges (Cont'd)

(D) Feature Change Charge

	<u>USOC</u>	<u>Month to Month</u>	<u>Nonrecurring Charges</u>
-Per Occurrence, Per Feature	XAAFC	None	\$ 75.00

(E) Transfer of Service

-Per Billing Account Number	XAATF	None	\$ 75.00
-----------------------------	-------	------	----------

(F) Fast Speed Change Charge¹

-18 Mbps thru 36 Mbps	MS5FS	None	\$ 500.00	(N)
-----------------------	-------	------	-----------	-----

Note 1: This nonrecurring charge applies per connection between 18 Mbps and 36 Mbps requested to be changed to either 1) another speed between 18 Mbps and 36 Mbps or 2) a 44.210 Mbps connection. Accordingly, the Fast Speed Change Charge applies in lieu of the Nonrecurring Charge specified in the MSATMS Connections and MSATMS Meetpoint Extended Connections sections of this tariff.

ACCESS SERVICE

21 - Fast Packet Access Services

21.5 Managed Shared ATM Service (MSATMS) (Cont'd)

21.5.9 Rate Categories (Cont'd)

The following provides an illustrative customer configuration to depict the application of the MSATMS rate categories.

A customer has three premises within a single LATA between which he needs to transmit data. Within this particular LATA there are two MSATMS Service Areas. Premises A and B are provisioned from Service Area 1; Premises C is provisioned from Service Area 2. Premises A requires a 149.760 Mbps UNI MSATMS Connection because its serving wire center is a SAP in Service Area 1. Premises B requires a 44.210 Mbps MSATMS UNI Extended Connection (Over 0 to 20 miles) because its serving wire center is outside the Service Area, 15 miles from the closest MSATMS Service Area Point. Premises C requires a 1.536 Mbps UNI MSATMS Connection because its serving wire center is a SAP in Service Area 2.

The customer would like to establish three PVCs. "PVC I" is a 4 Mbps VBT-RT PVC from Premises A to Premises B. "PVC II" is a UBR PVC from Premises A to Premises C. "PVC 3" is a 256 Kbps CBR PVC from Premises A to Premises C. The following rate elements shown by premises would be applicable for this service configuration:

	<u>Premises A</u>	<u>Premises B</u>	<u>Premises C</u>
MSATMS Connection:	149.760 Mbps UNI	44.210 Mbps UNI	1.536 Mbps UNI
-PVC I:	VBR-RT PVC Segment 4 Mbps PVC Bdwth	VBR-RT PVC Segment 4 Mbps PVC Bdwth	
-PVC II:	UBR PVC Segment UBR ISAL Per PVC UBR ISAL Bdwth		UBR PVC Segment UBR ISAL Per PVC UBR ISAL Bdwth

ACCESS SERVICE

21 - Fast Packet Access Services

21.5 Managed Shared ATM Service (MSATMS) (Cont'd)

21.5.9 Rate Categories (Cont'd)

(C) Feature Change Charge (Cont'd)

Only one Feature Change Charge applies per customer request that involves changes to multiple existing PVC's of the same PVC service category that are provisioned out of the same MSATMS switch. (For example, one Feature Change Charge would apply per customer request to change the PVC segment bandwidth associated with two existing CBR PVCs provisioned out of the same MSATMS switch.)

A Feature Change Charge applies in lieu of standard MSATMS nonrecurring charges for a customer request where no physical work is required to convert the customer's existing service to MSATMS from Exchange Access ATM Service and Special Access; standard MSATMS nonrecurring charges apply for such requests when any physical work is required.

(N)
(N)
(N)
(N)
(N)

(D) Transfer of Service

When a change to the customer of record is requested, transfer of service charges, as set forth in 21.5.10(E) following will apply. Charges are applied per Billing Account Number (BAN).

Administrative changes, as identified below, will be made without charge(s) to the customer. Such changes require the continued provision and billing of the Access Service to the same entity (i.e., customer remains responsible for all outstanding indebtedness for Access Service). Administrative changes are as follows:

- Change of customer name (i.e., the customer of record does not change but rather the customer of record changes its name -- e.g., AT&T-Long Lines to AT&T-Long Lines to AT&T-Communications),
- Change of customer or customer's end user premises address when the change of address is not a result of physical relocation of equipment,
- Change in billing data (name, address, or contract name or telephone number. The customer of record does not change),
- Change of customer circuit identification,
- Change of billing account number,
- Change of customer test line number,
- Change of customer or customer's end user contact name of telephone number, and
- Change of jurisdiction.

All other service arrangements, including physical changes to existing services, will be charged as follows:

- If the change involves the addition of an optional feature that has a separate nonrecurring charge, that nonrecurring charge will apply.

EFFECTIVE: MAY 23, 2000

ACCESS SERVICE

21 - Fast Packet Access Services

21.5 Managed Shared ATM Service (MSATMS) (Cont'd)

21.5.9 Rate Categories (Cont'd)

(C) Feature Change Charge (Cont'd)

Only one Feature Change Charge applies per customer request that involves changes to multiple existing PVC's of the same PVC service category that are provisioned out of the same MSATMS switch. (For example, one Feature Change Charge would apply per customer request to change the PVC segment bandwidth associated with two existing CBR PVCs provisioned out of the same MSATMS switch.)

(D) Transfer of Service

When a change to the customer of record is requested, transfer of service charges, as set forth in 21.5.10(E) following will apply. Charges are applied per Billing Account Number (BAN).

Administrative changes, as identified below, will be made without charge(s) to the customer. Such changes require the continued provision and billing of the Access Service to the same entity (i.e., customer remains responsible for all outstanding indebtedness for Access Service). Administrative changes are as follows:

- Change of customer name (i.e., the customer of record does not change but rather the customer of record changes its name -- e.g., AT&T-Long Lines to AT&T-Long Lines to AT&T-Communications),
- Change of customer or customer's end user premises address when the change of address is not a result of physical relocation of equipment,
- Change in billing data (name, address, or contract name or telephone number. The customer of record does not change),
- Change of customer circuit identification,
- Change of billing account number,
- Change of customer test line number,
- Change of customer or customer's end user contact name of telephone number, and
- Change of jurisdiction.

All other service arrangements, including physical changes to existing services, will be charged as follows:

- If the change involves the addition of an optional feature that has a separate nonrecurring charge, that nonrecurring charge will apply.

EFFECTIVE: MAY 23, 2000

ACCESS SERVICE

21 - Fast Packet Access Services

21.5 Managed Shared ATM Service (MSATMS) (Cont'd)

21.5.9 Rate Categories (Cont'd)

(C) Optional Features

(1) Inter Service Area Link (ISAL)

The Telephone Company may establish facilities between MSATMS switching equipment in different Service Areas in the same LATA and may allow customers to share bandwidth on these facilities. Where these shared facilities are available to customers, an Inter Service Area Link is an Optional Feature that allows the customer to establish a PVC link between MSATMS Connections in the two different Service Areas.

The customer must request an Inter Service Area Link that provides the extension of a PVC between two Service Areas. Each link has an associated bandwidth that must match the bandwidth of the PVC Segments associated with the PVC. One end-to-end PVC exists between both customer premises through an Inter Service Area Link.

The appropriate rates and charges for the Inter Service Area Link are the ISAL Per PVC and ISAL PVC Bandwidth Charges from 21.5.10(C); these charges are applied per end of link. A nonrecurring charge (the ISAL Per PVC Charge) and a monthly rate (the ISAL PVC Bandwidth Charges) applies for each end of the Inter Service Area Link. These ISAL charges are in addition to the associated PVC Segment and PVC Segment Bandwidth charges from 21.5.10(B) that are applicable for the portions of this PVC in each service Area.

(D) Feature Change Charge

A Feature Change Charge applies for a customer request to change an existing MSATMS Feature from Section 21.5.10(B) or (C) for which there is no nonrecurring charge. (Examples: A Feature Change Charge applies when a customer requests a change in the PVC segment bandwidth required on an existing non-UBR PVC. A Feature Change Charge applies when a customer requests that UBR Service Activation be added to an existing MSATMS Connection which currently is not activated to carry UBR PVCs if the request does not also include an order for a UBR ATM PVC Segment which carries a nonrecurring charge. A customer request to change the service category of an existing CBR PVC to a VBR-RT PVC would not involve a Feature Change Charge but would be treated as a disconnect of the CBR PVC and a new request for a VBR-RT PVC for which there is a nonrecurring charge.)

EFFECTIVE: MAY 23, 2000

ACCESS SERVICE

(N)

21.5 Managed Shared ATM Service (MSATMS) (Cont'd)

(N)

21.5.9 Rate Categories (Cont'd)

(N)

(B) PVC Features

(N)

The PVC Features rate category provides for the ordering and provisioning of PVCs in association with a MSATMS Connection.

(N)

(N)

The rates for PVC Features may vary by PVC service category and are listed in Section 21.5.10 by applicable PVC service category.

(N)

(N)

- (1) PVC Segment Charge - A PVC Segment Charge applies for each PVC segment established over a network interface. A PVC Segment Charge applies under all PVC service categories.

(N)

(N)

(N)

- (2) PVC Segment Bandwidth Charge - A PVC Segment Bandwidth Charge is required per PVC segment established under the CBR or VBR PVC service category (but is not applicable to UBR PVCs). PVC bandwidth represents MSATMS network resources required for the non-UBR PVC and is based on the non-UBR PVC's traffic parameters (i.e., PCR, SCR, and MBS). The total charge for this rate element per segment is determined by multiplying the non-UBR PVC segment bandwidth by the PVC Segment Bandwidth Charge, either Per Megabit or Per Increment of 64 Kbps (as appropriate per Section 21.5.1(D)).

(N)

(N)

(N)

(N)

(N)

(N)

(N)

(N)

(N)

- (3) UBR Service Activation Charge - A UBR Service Activation is applicable for each MSATMS Connection over which UBR PVC(s) will traverse. One charge is applicable per MSATMS Connection regardless of how many UBR PVC's will traverse that MSATMS Connection.

(N)

21.5.9 Rate Categories (Cont'd)

(N)

(A) MSATMS Connections (Cont'd)

(N)

When a MSATMS customer moves (physically changes to another premises),
the MSATMS Connection associated with the former location shall be
disconnected and the service at the new location shall be considered as
a new installation; nonrecurring charges shall apply for the
installation of service at the new location.

(N)

(N)

(N)

(N)

(N)

A MSATMS customer request to change an existing MSATMS Connection to a
different transmission speed shall be considered as a request for the
disconnect of the existing service and a new installation of the
different speed MSATMS Connection. Nonrecurring charges shall apply for
the different speed MSATMS Connection.

(N)

(N)

(N)

(N)

(N)

A MSATMS customer request to change an existing MSATMS Connection to a
Managed Shared Frame Relay Service Connection (MSFRS) will be treated as
a request for the disconnect of the MSATMS and a new installation of the
MSFRS.

21.5.8 Rate Regulations (Cont'd)

MSATMS is available for use with the Fast Packet Savings Plan subject to the regulations specified in 2.4.8. (F) preceding.

21.5.9 Rate Categories

The following rate categories apply to MSATMS:

(A) MSATMS Connections

This rate category provides for the transport from the customer's premises to the MSATMS network. This rate category includes the MSATMS switching function and the connectivity of all MSATMS switches within a MSATMS Service Area. A nonrecurring charge and monthly rate applies per standard or primary MSATMS Connection and per MSATMS Back-Up Connection. (C)

A nonrecurring Primary MSATMS Connection Enablement/Change Charge provided in 21.5.10(G) following is applicable: 1) per existing standard MSATMS Connection requested to be converted to a primary MSATMS Connection (i.e., to be back-up enabled), 2) per existing primary MSATMS Connection requested to be converted to a standard Network Interface (i.e., to disable the capability to be used with a MSATMS Back-Up Connection), and 3) per existing primary MSATMS Connection requested to be reassigned to work with a different MSATMS Back-Up Connection. The Primary MSATMS Connection Enablement/Change Charge shall only be applied when the customer provides the appropriate information on all of the service orders required such that all orders involved can be related and worked together. Failure by the customer(s) to provide adequate information to allow the orders to be appropriately related together will result in the billing of such orders as individual disconnects and new connects. (N)

A customer request to convert a standard or primary MSATMS Connection to a MSATMS Back-Up Connection (or vice versa) shall be treated as a disconnect and new connect. (N)

21.5.7 Minimum Period of Service

The minimum period per MSATMS rate element selected is one month.

21.5.8 Rate Regulations

Rates and charges are specified in 21.5.10 following for the ordering and provisioning of MSATMS.

For a promotional period from January 11, 2002 to April 10, 2002, customers may receive a credit for BellSouth Exchange Access ATM Service(XAATMS), BellSouth Exchange Access Frame Relay Service(XAFRS), BellSouth Managed Shared ATM Service(MSATMS) and BellSouth Managed Shared Frame Relay Service(MSFRS) Nonrecurring Charges for new ATM user-to-network interfaces(UNIs) and/or new Frame Relay network-to-network interface(NNIs) of DS1 or higher speed, provided the following criteria are met:

1. New ATM UNIs and/or Frame Relay NNIs are XAATMS, XAFRS, MSFRS, and/or MSATMS connections;
2. These new ATM UNIs and/or new Frame Relay NNIs must be ordered in at least 10 LATAS;
3. Five or more of these new ATM UNIs and/or new Frame Relay NNIs must be speeds of DS3 or higher
4. XAATMS and XAFRS connections must be ordered under the Fast Packet Services Payment Plan, Plan B(25-48 months) or a Fast Packet Savings Plan;
5. MSFRS and MSATMS connections must be ordered under a Fast Packet Savings Plan;
6. Installation must be completed by May 10, 2002.

Customers must pay Nonrecurring Charges at due date to avoid late payment fees. Credits equal to Nonrecurring Charges that are billed for installation will be applied at the end of the promotional period. No interest will be paid on these credits from payment date to credit date.

Certain information previously appearing on this page now appears on Original Page 21-53.1.

(F) Service Level Agreements (Cont'd)

(N)

(6) Credits for Missed SLA Commitments

(N)

The following credits are provided for SLA performance commitments missed during a calendar month subject to the conditions outlined herein 21.5.2(F).

(N)

(N)

(N)

Total SLA credits issued for an individual ATM UNI in a specific calendar month cannot exceed the total monthly recurring charges billed for that ATM UNI (i.e., cannot exceed the sum of the monthly billing for the MSATMS Connection rate element plus any rate elements for features).

(N)

(N)

(N)

(N)

(N)

(a) Network Availability SLA Credit¹:

(N)

- This credit is appropriate when the Network Availability commitment for the customer's total network is missed; this credit is then applied per individual ATM UNI that does not specifically meet the Network Availability commitment.
- For each individual ATM UNI not meeting this commitment for a specific calendar month, a credit equal to 1/30 of its monthly recurring charge for the MSATMS Connection rate element will be issued.

(N)

(N)

(N)

(N)

(N)

(N)

(N)

(N)

(b) Cell Delivery Rate SLA Credit¹:

(N)

- This credit is applied per individual ATM PVC (i.e., PVC Segment pair forming the PVC) that does not meet the Cell Delivery Rate commitment.
- For each PVC not meeting this commitment for a specific calendar month, a credit equal to \$5.00 for the affected PVC Segment pair will be issued.

(N)

(N)

(N)

(N)

(N)

(N)

(N)

(c) Cell Loss Ratio SLA Credit¹:

(N)

- This credit is applied per individual ATM PVC (i.e., PVC Segment pair forming the PVC) that does not meet the Cell Loss Ratio commitment.
- For each PVC not meeting this commitment for a specific calendar month, a credit equal to \$5.00 for the affected PVC Segment pair will be issued.

(N)

(N)

(N)

(N)

(N)

(N)

Note 1: This credit will be reduced by the applicable Fast Packet Savings Plan (FSP) discount if the customer has an FSP agreement.

(N)

(F) Service Level Agreements (Cont'd)

(N)

(5) Service Level Commitments (Cont'd)

(N)

(b) Cell Delivery Rate Commitment: by PVC Category of Service (Cont'd)

(N)

- Through the NVS System, Cell Delivery Rate will measure the percentage of cells successfully delivered for a CBR or VBR PVC during a specific calendar month. The Cell Delivery Rate measures the quantity of cells received versus quantity of cells transmitted during a specific calendar month between the two ATM UNIs forming the PVC (i.e., the difference in cells transmitted versus received are considered "lost").
- The monthly Cell Delivery Rate for a qualifying PVC in a specific calendar month is determined by subtracting the total cells lost from the total cells transmitted, divided by the total cells transmitted. If the resulting percentage representing the percent of cells delivered for that PVC is less than the specific commitment for that PVC class of service, this commitment has been missed and the Cell Delivery Rate credit set forth in 21.5.2(F)(6)(b) will then be issued on this ATM PVC.

(N)

(N)

(N)

(N)

(N)

(N)

(N)

(N)

(N)

(N)

(N)

(N)

(N)

(N)

(c) Cell Loss Ratio Commitment: 1%

(N)

- A Cell Loss Ratio commitment is provided on a per PVC basis for every ATM PVC.
- Through the NVS system, Cell Loss Ratio will measure the percentage of transmitted cells not delivered (or lost) for a PVC during a specific calendar month. The Cell Loss Ratio measures the quantity of cells lost versus the quantity of cells transmitted during a specific calendar month between the two ATM UNIs forming the PVC (i.e., the difference in cells transmitted versus received are considered "lost").
- The monthly Cell Loss Ratio for a PVC in a specific calendar month is determined by dividing the quantity of cells lost (determined by subtracting the quantity of cells received from the quantity of cells transmitted) by the quantity of cells transmitted during that calendar month. If the resulting percentage representing the percent of cells lost for the PVC is greater than 1%, this commitment has been missed and the Cell Delivery Rate credit set forth in 21.5.2(F)(6)(c) will then be issued on this ATM PVC based upon its category of service.

ACCESS SERVICE

21 - Fast Packet Access Services

21.5 Managed Shared ATM Service (MSATMS) (Cont'd)

21.5.2 Service Description (Cont'd)

(F) Service Level Agreements

(3) (Cont'd)

- the customer's premises equipment,
- unavailability of the customer's facilities and/or equipment, and
- customer oversubscription of the ATM UNI beyond 200%, calculated as the total VBR equivalent bandwidth on all PVCs carried by the ATM UNI (after the CBR bandwidth is subtracted) may not be greater than 200% of the ATM UNI Connection speed.

- (4) SLA credits for missed commitments do not apply for situations when the customer's service is out of operation as a result of 1) scheduled maintenance windows as set forth in 21.5.2(E) preceding and 2) customer requests for PVC rearrangements which resulted in that service being unavailable as set forth in 21.5.2(C)(a) preceding. Time from such activity does not count towards the time a service is considered as unavailable during a calendar month for purposes of measuring for the Network Availability SLA. (C) (C) (C) (C)

(5) Service Level Commitments

SLA commitments for the specific aspects of the ATM network's performance set forth in (1) preceding are measured on a specific calendar month basis. The specific network performance commitments provided and how their performance is measured through the NVS system for a calendar month are as follows:

(a) Network Availability Commitment: 99.9%

- The Network Availability commitment is provided on the customer's total ATM network. Network Availability will measure the percentage of time during a calendar month that the customer's ATM network is available.
- Network availability will be measured through the NVS system for the customer's total ATM network and for each individual ATM UNI for a whole calendar month.
- For the purpose of measuring Network Availability, times during which an ATM UNI is out of operation in association with maintenance windows (as set forth in 21.5.2(E)) and in association with situations over which the Company does not have control (as set forth in 21.5.2(F)(3)) are counted as "available" time.

EFFECTIVE: DECEMBER 31, 2004

ACCESS SERVICE

(N)

(F) Service Level Agreements

(N)

(3) (Cont'd)

(N)

- the customer's premises equipment, (N)
- unavailability of the customer's facilities and/or equipment, and (N)
- customer oversubscription of the ATM UNI beyond 200%, calculated as the total VBR equivalent bandwidth on all PVCs carried by the ATM UNI (after the CBR bandwidth is subtracted) may not be greater than 200% of the ATM UNI Connection speed. (N)

- (4) SLA credits for missed commitments do not apply for situations when the customer's service is out of operation as a result of scheduled maintenance windows as set forth in 21.5.2(E) preceding. Time from such maintenance activity does not count towards the time a service is considered as unavailable during a calendar month for purposes of measuring for the Network Availability SLA. (N)

(5) Service Level Commitments

(N)

SLA commitments for the specific aspects of the ATM network's performance set forth in (1) preceding are measured on a specific calendar month basis. The specific network performance commitments provided and how their performance is measured through the NVS system for a calendar month are as follows: (N)

(a) Network Availability Commitment: 99.9%

(N)

- The Network Availability commitment is provided on the customer's total ATM network. Network Availability will measure the percentage of time during a calendar month that the customer's ATM network is available. (N)
- Network availability will be measured through the NVS system for the customer's total ATM network and for each individual ATM UNI for a whole calendar month. (N)
- For the purpose of measuring Network Availability, times during which an ATM UNI is out of operation in association with maintenance windows (as set forth in 21.5.2(E)) and in association with situations over which the Company does not have control (as set forth in 21.5.2(F)(3)) are counted as "available" time. (N)

EFFECTIVE: DECEMBER 31, 2004

ACCESS SERVICE (N)

21 - Fast Packet Access Services (N)

21.5 Managed Shared ATM Service (MSATMS) (Cont'd) (N)

21.5.2 Service Description (Cont'd) (N)

(F) Service Level Agreements (N)

Service Level Agreements (SLAs) provide the Company's service level commitments for specific aspects of its ATM network's performance. (N)
SLAs are only provided for customers with at least ten ATM UNIs. Such (N)
customers must also subscribe to Network Visibility Service (N)
(specifically NVS Fault Management, On Demand Statistics and (N)
Performance Reports) which is the primary monitoring and reporting (N)
tool used for determining performance results and missed commitments. (N)

SLA commitments only apply for service wholly within Company (N)
territory; SLA commitments will not apply for service which is part (N)
of a jointly provided service. (N)

(1) SLA commitments are provided for Network Availability, Cell Delivery (N)
Rate and Cell Loss Ratio. (N)

(2) SLA credits are provided for missed commitments, except as specified (N)
otherwise in (3) and (4) following. An SLA report is provided through (N)
the NVS system that provides details of missed commitments upon which (N)
credits will be issued; the SLA report is available on a calendar (N)
month basis. Credits are automatically issued based upon the end-of- (N)
month SLA report; such credits shall only be issued once a month. The (N)
Company's calculation of its performance through the NVS system shall (N)
be the sole determinate of the Company's obligation to provide a (N)
credit for a missed performance commitment as set forth in this (N)
tariff. (N)

(3) SLA credits for missed commitments do not apply when any commitment (N)
is not met because the Company does not have control over the (N)
circumstances causing the commitment to be missed. Situations over (N)
which the Company does not have control can be defined as, but not (N)
limited to the following: (N)

- any act, any omission or negligence on the part of the customer, any (N)
other customer or any third party, or of any other entity providing a (N)
portion of the service, (N)

- labor difficulties, governmental orders, civil commotions, acts of (N)
civil or military authority, embargoes, epidemics, declared National (N)
Emergencies, criminal actions against the Company, war, terrorist (N)
acts, riots, insurrections, fires, explosions, nuclear accidents, (N)
power blackouts, acts of God (including, but not limited to, (N)
earthquakes, floods or unusually severe weather conditions) or other (N)
circumstances beyond the Company's control, (N)

EFFECTIVE: MAY 23, 2000

ACCESS SERVICE

21 - Fast Packet Access Services

(N)

21.5 Managed Shared ATM Service (MSATMS) (Cont'd)

(N)

21.5.9 Rate Categories (Cont'd)

(N)

(B) PVC Features

(N)

The PVC Features rate category provides for the ordering and provisioning of PVCs in association with a MSATMS Connection.

(N)

(N)

The rates for PVC Features may vary by PVC service category and are listed in Section 21.5.10 by applicable PVC service category.

(N)

(N)

- (1) PVC Segment Charge - A PVC Segment Charge applies for each PVC segment established over a network interface. A PVC Segment Charge applies under all PVC service categories.

(N)

(N)

(N)

- (2) PVC Segment Bandwidth Charge - A PVC Segment Bandwidth Charge is required per PVC segment established under the CBR or VBR PVC service category (but is not applicable to UBR PVCs). PVC bandwidth represents MSATMS network resources required for the non-UBR PVC and is based on the non-UBR PVC's traffic parameters (i.e., PCR, SCR, and MBS). The total charge for this rate element per segment is determined by multiplying the non-UBR PVC segment bandwidth by the PVC Segment Bandwidth Charge, either Per Megabit or Per Increment of 64 Kbps (as appropriate per Section 21.5.1(D)).

(N)

(N)

(N)

(N)

(N)

(N)

(N)

(N)

(N)

- (3) UBR Service Activation Charge - A UBR Service Activation is applicable for each MSATMS Connection over which UBR PVC(s) will traverse. One charge is applicable per MSATMS Connection regardless of how many UBR PVC's will traverse that MSATMS Connection.

ACCESS SERVICE

21 - Fast Packet Access Services

21.5 Managed Shared ATM Service (MSATMS) _ (Cont'd)

21.5.2 Service Description (Cont'd)

(D) Transfer of Service

When a change in billing data (e.g., name, address, contract name, or telephone number) is requested in association with a change in the customer's record, transfer of service charges, as set forth in 21.5.10(E) following will apply. Charges are applied on a per Billing Account Number (BAN).

(E) Maintenance

In order to maintain the quality of MSATMS, the Telephone Company reserves the right to perform preventive maintenance and software updates to the network. This could result in MSATMS being unavailable during the time period between 2:00 A.M. and 4:00 A.M. Eastern Time on the specific days as set forth by state in the following chart. The Telephone Company only expects to utilize this maintenance window for any given switch on the average of once a quarter. However, the Telephone Company reserves the right to perform maintenance at any time at its discretion that it believes such maintenance is necessary. The Telephone Company will make a reasonable effort to provide notice to those customers likely to be affected by such maintenance work. (C)

<u>State</u>	<u>Scheduled Maintenance Days</u>	(N)
Alabama	Sunday and Monday	(N)
Florida	Sunday and Wednesday	(N)
Georgia	Sunday and Friday	(N)
Kentucky	Sunday and Monday	(N)
Louisiana	Sunday and Tuesday	(N)
Mississippi	Sunday and Tuesday	(N)
North Carolina	Sunday and Saturday	(N)
South Carolina	Sunday and Saturday	(N)
Tennessee	Sunday and Thursday	(N)

21.5.3 Technical Specifications

MSATMS services installed after the effective date of this tariff will conform to the service specifications and standards for MSATMS set forth in the following references:

- BellSouth Technical Reference 73585, "Asynchronous Transfer Mode (ATM) Network Interface and Performance Specifications".

The specifications set forth in BellSouth TR 73585 are in conformance with the following national standards for ATM services:

- ATM Forum documents, "ATM User-Network Interface Specification" (Versions 3.0 and 3.1).

21.5.2 Service Description

(M)

(A) Installation of Service

(M)

Nonrecurring charges apply to each MSATMS Connection installed.

(M)

Nonrecurring charges for the MSATMS Connection elements are set forth in 21.5.10(A) following.

(M)

(M)

(B) Installation of Features

(M)

Nonrecurring charges apply to each PVC segment by PVC service category as set forth in 21.5.10(B) following under PVC Features.

(M)

(M)

Nonrecurring charges apply to Optional Features as set forth in 21.5.10(C) following.

(M)

(M)

(C) Service Rearrangements

(M)

Service rearrangements are changes to existing (installed) services which do not result in a change in the minimum period requirements as set forth in 5.6(E) preceding. Changes which result in the establishment of new minimum period obligations are treated as disconnects and starts. A change which results from a transfer of service is described and charged as set forth in (D) and 21.5.10(E) following.

ACCESS SERVICE

21 - Fast Packet Access Services

21.5 Managed Shared ATM Service (MSATMS) (Cont'd)

21.5.1 General Description (Cont'd)

(D) PVC Segment Bandwidth (Cont'd)

The following table illustrates the PVC segment equivalent bandwidth calculation for each non-UBR type PVC with 1 megabit of bandwidth.

PVC		Traffic Parameters		
		Peak	Sustainable	Maximum
Service	Equivalent	Cell Rate	Cell Rate	Burst Size
Category	Bandwidth	(Cells/Sec)	(Cells/Sec)	(Cells)
CBR	1 Megabit	2358	N/A	N/A
VBR-RT	1 Megabit	3906	1953	32
VBR-NRT	1 Megabit	4975	1244	100

In LATAs where there are multiple MSATMS Service Areas, the customer may utilize a MSATMS Inter Service Area Link to have connectivity on a per PVC basis between MSATMS Connections in each Service Area. The inter service area portion of such a PVC is provisioned over a facility provided by the Telephone Company which allows customers to share bandwidth on these facilities that connect the two MSATMS Service Areas. This Optional Feature is called an Inter Service Area Link. Information provided in Appendix A of this tariff may be used to determine if two MSATMS Connections (based upon their associated customer premises serving wire centers) are in two different Service Areas within the same LATA, and therefore, require an Inter Service Area Link.

21.5.2 Service Description

(A) Installation of Service

Nonrecurring charges apply to each MSATMS Connection installed.

Nonrecurring charges for the MSATMS Connection elements are set forth in 21.5.10(A) following.

(B) Installation of Features

Nonrecurring charges apply to each PVC segment by PVC service category as set forth in 21.5.10(B) following under PVC Features. Nonrecurring charges apply to Optional Features as set forth in 21.5.10(C) following.

(C) Service Rearrangements

Service rearrangements are changes to existing (installed) services which do not result in a change in the minimum period requirements as set forth in 5.6(E) preceding. Changes which result in the establishment of new minimum period obligations are treated as disconnects and starts. A change which results from a transfer of service is described and charged as set forth in (D) and 21.5.10(E) following.

EFFECTIVE: NOVEMBER 14, 2001

ACCESS SERVICE

21 - Fast Packet Access Services

21.5 Managed Shared ATM Service (MSATMS) (Cont'd)

21.5.1 General Description (Cont'd)

(D) PVC Segment Bandwidth

A PVC Segment Bandwidth Charge is applicable for each CBR or VBR PVC segment. Such non-UBR PVC equivalent bandwidth represents the MSATMS network resources based on the PVC's traffic parameters. The PVC Segment Bandwidth Charge is derived by multiplying the PVC segment's equivalent bandwidth (calculation following) by the appropriate PVC Segment Bandwidth Charge (expressed in megabits or increments of 64 Kbps as described following).

The following calculations are applicable for determining non-UBR PVC segment bandwidth based upon the PVC category of service.

- (1) CBR equivalent bandwidth is equal to the PCR (cells/sec) times 0.000424. PCR is equal to increments of 64 Kbps of equivalent bandwidth times 150.943, or megabits of equivalent bandwidth times 2358.491. (T)
- (2) VBR-RT equivalent bandwidth is equal to the SCR (cells/sec) times 0.000512. For VBR-RT, service, the PCR is fixed at 200% of the SCR and the MBS is fixed at 32 cells. SCR is equal to increments of 64 Kbps of equivalent bandwidth times 125.000, or megabits of equivalent bandwidth times 1953.125. (T)
- (3) VBR-NRT equivalent bandwidth is equal to the SCR (cells/sec) times 0.000804. For VBR-NRT service, the PCR is fixed at 400% of the SCR (unless specified otherwise by the customer) and the MBS is fixed at 100 cells. SCR is equal to increments of 64 Kbps of equivalent bandwidth times 79.602, or megabits of equivalent bandwidth times 1243.781. VBR-NRT equivalent bandwidth, where the PCR to SCR ratio is specified by the customer, is determined using the formula in Section 1.3.4 of BellSouth Technical Reference 73585. (T)

Where the result from the PVC segment equivalent bandwidth calculation is greater than 1.536 Mbps, the value is expressed in units of megabits and (if a fraction of a megabit) is rounded up to the next whole megabit. This bandwidth is multiplied by the Per Megabit Bandwidth Charge.

Where the result from the PVC segment equivalent bandwidth calculation is less than or equal to 1.536 Mbps, that number should be divided by .064 Mbps to arrive at a quantity of 64 Kbps increments. If the resulting number is not a whole number, it is rounded up to the next whole number and represents the number of 64 Kbps increments that should be utilized in the derivation of the PVC Segment Bandwidth Charge. This bandwidth is multiplied by the Per Increment of 64 Kbps Bandwidth Charge.

EFFECTIVE: MAY 23, 2000

ACCESS SERVICE

21 - Fast Packet Access Services

21.5 Managed Shared ATM Service (MSATMS) (Cont'd)

21.5.1 General Description (Cont'd)

(D) PVC Segment Bandwidth

A PVC Segment Bandwidth Charge is applicable for each CBR or VBR PVC segment. Such non-UBR PVC equivalent bandwidth represents the MSATMS network resources based on the PVC's traffic parameters. The PVC Segment Bandwidth Charge is derived by multiplying the PVC segment's equivalent bandwidth (calculation following) by the appropriate PVC Segment Bandwidth Charge (expressed in megabits or increments of 64 Kbps as described following).

The following calculations are applicable for determining non-UBR PVC segment bandwidth based upon the PVC category of service.

- (1) CBR equivalent bandwidth is equal to the PCR (cells/sec) times 0.000424. PCR is equal to increments of 64 Kbps of equivalent bandwidth times 151, or megabits of equivalent bandwidth times 2358.
- (2) VBR-RT equivalent bandwidth is equal to the SCR (cells/sec) times 0.000512. For VBR-RT, service, the PCR is fixed at 200% of the SCR and the MBS is fixed at 32 cells. SCR is equal to increments of 64 Kbps of equivalent bandwidth times 125, or megabits of equivalent bandwidth times 1953.
- (3) VBR-NRT equivalent bandwidth is equal to the SCR (cells/sec) times 0.000804. For VBR-NRT service, the PCR is fixed at 400% of the SCR (unless specified otherwise by the customer) and the MBS is fixed at 100 cells. SCR is equal to increments of 64 Kbps of equivalent bandwidth times 80, or megabits of equivalent bandwidth times 1244. VBR-NRT equivalent bandwidth, where the PCR to SCR ratio is specified by the customer, is determined using the formula in Section 1.3.4 of BellSouth Technical Reference 73585.

Where the result from the PVC segment equivalent bandwidth calculation is greater than 1.536 Mbps, the value is expressed in units of megabits and (if a fraction of a megabit) is rounded up to the next whole megabit. This bandwidth is multiplied by the Per Megabit Bandwidth Charge.

Where the result from the PVC segment equivalent bandwidth calculation is less than or equal to 1.536 Mbps, that number should be divided by .064 Mbps to arrive at a quantity of 64 Kbps increments. If the resulting number is not a whole number, it is rounded up to the next whole number and represents the number of 64 Kbps increments that should be utilized in the derivation of the PVC Segment Bandwidth Charge. This bandwidth is multiplied by the Per Increment of 64 Kbps Bandwidth Charge.

EFFECTIVE: MAY 23, 2000

ACCESS SERVICE

21 - Fast Packet Access Services

21.5 Managed Shared ATM Service (MSATMS) (Cont'd)

21.5.1 General Description (Cont'd)

(B) PVC Service Categories (Cont'd)

(3) Variable Bit Rate - Non-Real Time (VBR-NRT): VBR-NRT allows for a PVC that can tolerate larger cell delay variations than VBR-RT. For example, VBR-NRT would be utilized for applications such as data file transfers. The customer specifies the bandwidth required for each VBR-NRT PVC when it is ordered.

(4) Unspecified Bit Rate (UBR): UBR allows for a PVC where the user does not require one of the PVC service categories described in (1) through (3) preceding. For example, UBR would be utilized where the customer seeks a low cost method of transporting bursty data for non-critical applications that can tolerate delay variations. The Telephone Company will attempt to deliver all ATM cells received via UBR PVCs; however, network congestion will result in loss of ATM cells.

(C) PVC Traffic Parameters

In accordance with the technical specifications for MSATMS set forth in the technical publications referenced herein Section 21.3.3, each non-UBR type PVC has a set of traffic parameters to describe the characteristics of the information being transmitted. Fixed values for these traffic parameters are derived from the PVC bandwidth specified by the customer for each PVC. These parameters are:

(1) Peak Cell Rate (PCR): The PCR, in cells/second, is an upper bound on the source traffic that can be submitted on a BellSouth XAATMS network interface. PCR is a traffic parameter considered for both CBR and VBR service categories.

PCR is the only traffic parameter considered for a CBR PVC; the equivalent bandwidth per CBR PVC equals the PCR, in cells/second, times 0.000424.

PCR is one of three traffic parameters considered for a VBR PVC. For a VBR-RT PVC, PCR is 200% of the SCR described following. For VBR-NRT, PCR is 400% of the SCR described following.

(2) Sustainable Cell Rate (SCR): The SCR, in cells/second, is an upper bound on the conforming average cell rate of a BellSouth XAATMS network interface over time.

SCR is a traffic parameter considered only for a VBR PVC. The equivalent bandwidth per VBR-RT PVC is equal to the SCR, in cells/second, times 0.000512. The bandwidth per VBR-NRT PVC is equal to the SCR, in cells/second, times 0.000804.

(3) Maximum Burst Size (MBS): MBS is the maximum number of consecutive cells that may be transmitted at the peak cell rate.

MBS is a traffic parameter considered only for a VBR PVC. For a VBR-RT PVC, the MBS is fixed at 32 cells. For a VBR-NRT PVC, the MBS is fixed at 100 cells.

EFFECTIVE: MAY 23, 2000

ACCESS SERVICE

21 - Fast Packet Access Services

(N)

21.5 Managed Shared ATM Service (MSATMS) (Cont'd)

(N)

21.5.1 General Description (Cont'd)

(N)

The following provides additional information on the terms used to describe the attributes of MSATMS with respect to the PVC Feature Charges that apply for PVC traffic. Information is provided regarding PVC segment, PVC service categories, PVC traffic parameters and PVC segment bandwidth.

(N)

(N)

(N)

(N)

(A) PVC Segment

(N)

For MSATMS, the PVC segment defines the logical path between a customer's premises and the network interface on a MSATMS switch. A PVC segment must be provisioned by the Telephone Company via service order activity and remain in place until requested to be removed by the customer. For MSATMS, two PVC segments are mapped together through a MSATMS switch(s) to create a PVC representing a virtual channel through the MSATMS network.

(N)

(N)

(N)

(N)

(N)

(N)

(N)

(B) PVC Service Categories

(N)

PVC service categories are established to support the service requirements of various categories of customer applications for PVCs. Four PVC service categories are available. The customer must specify the desired service category for each PVC that is ordered. MSATMS supports the following types of PVC service categories:

(N)

(N)

(N)

(N)

(N)

- (1) Constant Bit Rate (CBR): CBR allows for applications where a PVC requires special network timing requirements (i.e., strict PVC cell loss, cell delay and cell delay variation performance). For example, a CBR PVC would be utilized for applications requiring circuit emulation (i.e., a continuously operating logical channel) over MSATMS at transmission speeds comparable to DS1 and DS3. Such applications would include private line like service or voice type service where delays in transmission cannot be tolerated. The customer specifies the bandwidth required for each CBR PVC when it is ordered.

(N)

(N)

(N)

(N)

(N)

(N)

(N)

(N)

(N)

- (2) Variable Bit Rate - Real Time (VBR-RT) allows for applications where a PVC requires low cell delay variation. For example, VBR-RT would be utilized for applications such as variable bit rate video compression and packet voice and video that are somewhat tolerant of delay. The customer specifies the bandwidth required for each VBR-RT PVC when it is ordered.

(N)

(N)

Note 1: However, CAS may not be available at all ATM switch locations.

(N)

EFFECTIVE: OCTOBER 23, 2003

ACCESS SERVICE

(N)

21 - Fast Packet Access Services

(N)

21.5 Managed Shared ATM Service (MSATMS) (Cont'd)

(N)

21.5.1 General Description (Cont'd)

(N)

ATM Circuit Emulation Service (ATM CES) allows the interworking of ATM Service with time division multiplexing (TDM) services at a DS1 level. ATM Circuit Emulation allows the encapsulation of DS1 level TDM Service into ATM cells by using AAL1 adaptation. (Adaptation defines how higher layer information such as voice, data and video are placed in the payload of the 53-byte ATM cells.) ATM Circuit Emulation Service is provided to emulate a structured or unstructured DS1 service; when provided to emulate a structured DS1, service may be requested with or without Channel Associated Signaling (CAS).

(N)
(N)
(N)
(N)
(N)
(N)
(N)

ATM CES provides for the emulation of a TDM DS1 circuit through the ATM network so that the customer may interwork TDM with their ATM Service. The customer is responsible for the appropriate charges for such TDM services from other tariffs in addition to the charges specified herein for Managed Shared ATMS Service. Additionally, with ATM CES, a permanent virtual circuit (PVC) is only available with Constant Bit Rate (CBR).

(N)
(N)
(N)
(N)
(N)

An Unstructured versus Structured Circuit Emulation Connection is selected based upon the customer's specific DS1 needs to respectively interwork an unstructured versus DS1 TDM service with ATM Service, subject to availability. ATM Circuit Emulation Service is available at a transmission speed of 1.536 Mbps.

(N)
(N)
(N)
(N)

An unstructured Circuit Emulation Connection is provided to accept the termination of a full DS1 TDM bit stream from the customer's premises through a DS1 circuit. One Unstructured Circuit Emulation Connection is required per such DS1 TDM service. One ATM CBR PVC Segment with 2 Mbps CBR PVC Segment Bandwidth shall apply in association with the service originating from the TDM premises to the ATM switch. Additionally, standard tariff charges apply for corresponding 2 Mbps ATM CBR PVC Segment to which this is mapped within the ATM switch; the associated MSATMS Connection must be a transmission speed or type which can accept the 2 Mbps CBR PVC.

(N)
(N)
(N)
(N)
(N)
(N)
(N)
(N)

A structured Circuit Emulation Connection accepts up to 24 DS0 terminations from a channelized DS1 bit stream(s) from the customer. The customer specifies the desired grouping of such DS0 terminations into ATM PVCs. An ATM CBR PVC Segment and Bandwidth Charges¹ apply for each PVC requested in association with the service originating from the TDM premises to the ATM switch. Additionally, the standard tariff changes apply for the corresponding ATM CBR PVC Segments to which these are mapped within the ATM switch.

(N)
(N)
(N)
(N)
(N)
(N)

Note 1: PVC Segment Bandwidth charges shall be based upon the equivalent bandwidth required for each PVC requested. The transport of TDM service is ATM CES requires additional overhead, sometimes referred to as "cell tax". Consequently, the bandwidth required for a given PVC will be greater than the sum of the DS0 TDM bandwidth. For example, the PVC resulting from a single DS0 TDM bit stream of 64 Kpbs will be greater than 64 Kbps as a result of equivalent bandwidth required for overhead and will require two increments of 64 Kbps bandwidth per CBV PVC Segment.

(N)

21.5 Managed Shared ATM Service (MSATMS) (Cont'd)

(N)

21.5.1 General Description (Cont'd)

(N)

A MSATMS Connection is appropriate for a customer whose premises serving wire center is inside the MSATMS Service Area. The appropriate rate depends upon the transmission speed requested.

(N)

(N)

(N)

Where a customer premises serving wire center is outside the MSATMS Service Area (but within the same LATA), a MSATMS Extended Connection (by transmission speed) is applicable based upon the mileage from the customer's serving wire center to the closest Service Area Point as designated by the Telephone Company (which is a central office inside the MSATMS Service Area). Six Extended Connections (by transmission speed) are available which reflect mileage bands outside the Service Area. These mileage bands are: Over 0 to 20 miles, over 20 to 50 miles, over 50 to 75 miles, over 75 to 100 miles, over 100 to 125 miles and over 125 miles. These bands represent the airline mileage from the customer's serving wire center to the closest Service Area Point.

(N)

(N)

(N)

(N)

(N)

(N)

(N)

(N)

(N)

(N)

Information required to determine which Service Area is associated with a specific customer premises serving wire center and whether a specific customer premises serving wire center is inside a Service Area or requires a MSATMS Extended Connection is available from Appendix A of this tariff. If the serving wire center is outside a MSATMS Service Area, the V&H coordinates of the customer's serving wire center and the closest Service Area Point are utilized in calculating the airline mileage to determine the appropriate mileage band for the MSATMS Extended Connection.

21 - Fast Packet Access Services

21.5 Managed Shared ATM Service (MSATMS) (Cont'd)

21.5.1 General Description (Cont'd)

A customer requiring more than a DS1 but less than a DS3, can economically utilize Inverse Multiplexing for ATM Service (IMA) to achieve ATM speeds in DS1 multiples and thereby avoid subscribing to a DS3 user network interface. IMA is a physical layer technology in which a high-speed cell stream is broken down and transported across multiple DS1 links, then reconstructed back into the original stream at the ATM switch or other associated ATM equipment. IMA allows multiple DS1 links to be treated as a single, coherent ATM connection that can be managed as a linked group. IMA network interfaces are available at speeds in multiples of 1.536 Mbps (in quantities from 2 to 6) which results in ATM user network interfaces of 3.072 Mbps, 4.608 Mbps, 6.144 Mbps, 7.680 Mbps, and 9.216 Mbps. Additionally, DSL service currently cannot be provisioned on IMA.

ATM Service IMA Customer Connection Speed	Quantity of DS1 Links Required
3.072 Mbps	2
4.608 Mbps	3
6.144 Mbps	4
7.680 Mbps	5
9.216 Mbps	6

Transmission speeds of 18 Mbps, 24 Mbps, 30 Mbps and 36 Mbps are provisioned utilizing 44.210 Mbps of transport bandwidth. Therefore, oversubscription is not allowed at speeds of 18 Mbps, 24 Mbps, 30 Mbps and 36 Mbps; the sum of the equivalent bandwidth for all permanent virtual connections must be less than or equal to the bandwidth of the specified speed. Additionally, Unspecified Bit Rate permanent virtual connections are not allowed on transmission speeds of 18 Mbps, 24 Mbps, 30 Mbps and 36 Mbps.

The appropriate rate for a MSATMS Connection is dependent upon the transmission speed requested and, unless specified otherwise herein this Section, whether or not the customer's serving wire center is in the MSFRS Service Area.

ACCESS SERVICE

21 - Fast Packet Access Services

21.5 Managed Shared ATM Service (MSATMS)

21.5.1 General Description

Managed Shared ATM Service (MSATMS) provides total premises to switch connectivity to BellSouth's ATM network through User-to-Network Interfaces (UNI) on the ATM switch. MSATMS is a connection oriented data service based on ATM cell-based switching technology. MSATMS allows for the interconnection of ATM compatible customer equipment by providing efficient throughput at high speeds of transmission. MSATMS provides the switching of symmetrical duplex transmission of fixed length ATM cells.

MSATMS is a service under which the customer assigns to the Telephone Company the responsibility for facility design, engineering and routing of ATM services in a MSATMS Service Area. A MSATMS Service Area is comprised of all the central offices in a geographic area (e.g., a large metropolitan area) as defined by the Telephone Company; these central offices are referred to as Service Area Points (SAP). The Telephone Company undertakes the responsibility to route the service from the customer's premises to the MSATMS network using whatever facilities and switch placement designs within the Service Area that would best deliver quality service. MSATMS facilities are stand-alone facilities and may not be provisioned over a customer's higher capacity Special Access facilities.

The rate structure for MSATMS is comprised of MSATMS Connections, PVC Features and Optional Features.

The primary MSATMS rate element is a MSATMS Connection. This rate element provides the transport from the customer premises to the MSATMS network. MSATMS Connections provide transport to the BellSouth ATM network using network interfaces on the ATM switch configured as User-to-Network Interfaces (UNI). The MSATMS Connection provides this standard network interface on the BellSouth ATM switch to receive the ATM cells into the switch and verify that the addressing and traffic parameters are valid before relaying the ATM cells to the specified destination. All ATM switches within the MSATMS Service Area are linked together to form the MSATMS network which is accessible through a MSATMS Connection. MSATMS Connections are offered at transmission speeds of 1.536 Mbps, 3.072 Mbps, 4.608 Mbps, 6.144 Mbps, 7.680 Mbps, 9.216 Mbps, 18 Mbps, 24 Mbps, 30 Mbps, 36 Mbps, 44.210 Mbps, 149.760 Mbps and 599.040 Mbps.

21.5 Managed Shared ATM Service (MSATMS)

(N)

21.5.1 General Description

(N)

Managed Shared ATM Service (MSATMS) provides total premises to switch connectivity to BellSouth's ATM network through User-to-Network Interfaces (UNI) on the ATM switch. MSATMS is a connection oriented data service based on ATM cell-based switching technology. MSATMS allows for the interconnection of ATM compatible customer equipment by providing efficient throughput at high speeds of transmission. MSATMS provides the switching of symmetrical duplex transmission of fixed length ATM cells.

(N)
(N)
(N)
(N)
(N)
(N)
(N)

MSATMS is a service under which the customer assigns to the Telephone Company the responsibility for facility design, engineering and routing of ATM services in a MSATMS Service Area. A MSATMS Service Area is comprised of all the central offices in a geographic area (e.g., a large metropolitan area) as defined by the Telephone Company; these central offices are referred to as Service Area Points (SAP). The Telephone Company undertakes the responsibility to route the service from the customer's premises to the MSATMS network using whatever facilities and switch placement designs within the Service Area that would best deliver quality service. MSATMS facilities are stand-alone facilities and may not be provisioned over a customer's higher capacity Special Access facilities.

(N)
(N)
(N)
(N)
(N)
(N)
(N)
(N)
(N)

The rate structure for MSATMS is comprised of MSATMS Connections, PVC Features and Optional Features.

(N)
(N)

The primary MSATMS rate element is a MSATMS Connection. This rate element provides the transport from the customer premises to the MSATMS network. MSATMS Connections provide transport to the BellSouth ATM network using network interfaces on the ATM switch configured as User-to-Network Interfaces (UNI). The MSATMS Connection provides this standard network interface on the BellSouth ATM switch to receive the ATM cells into the switch and verify that the addressing and traffic parameters are valid before relaying the ATM cells to the specified destination. All ATM switches within the MSATMS Service Area are linked together to form the MSATMS network which is accessible through a MSATMS Connection. MSATMS Connections are offered at transmission speeds of 1.536 Mbps, 44.210 Mbps, 149.760 Mbps and 599.040 Mbps.

(N)
(N)
(N)
(N)
(N)
(N)
(N)
(N)
(N)
(N)
(N)

The appropriate rate for a MSATMS Connection is dependent upon the transmission speed requested and, unless specified otherwise herein this Section, whether or not the customer's serving wire center is in the MSFRS Service Area.

ACCESS SERVICE

21 - Fast Packet Access Services

21.4 Managed Shared Frame Relay Service (MSFRS) (Cont'd)

21.4.9 Rate Categories (Cont'd)

(C) Feature Change Charge

A Feature Change Charge applies for a customer request to change an existing MSFRS Optional Feature for which there is no nonrecurring charge. (Examples: A Feature Change Charge applies for a customer request to change the CIR value associated with an existing DLCI. A Feature Change Charge applies for a customer request to change the CIR value associated with an existing DLCI and related ISAL CIR.)

(D) Transfer of Service

When a change to the customer of record is requested, transfer of service charges, as set forth in 21.4.10(D) following will apply. Charges are applied on a Billing Account Number (BAN).

Administrative changes, as identified below, will be made without charge(s) to the customer. Such changes require the continued provision and billing of the Access Service to the same entity (i.e., customer remains responsible for all outstanding indebtedness for Access Service). Administrative changes are as follows:

- Change of customer name (i.e., the customer of record does not change but rather the customer of record changes its name -- e.g., AT&T-Long Lines to AT&T-Long Lines to AT&T-Communications),
- Change of customer or customer's end user premises address when the change of address is not a result of physical relocation of equipment,
- Change in billing data (name, address, or contract name or telephone number. The customer of record does not change),
- Change of customer circuit identification,
- Change of billing account number,
- Change of customer test line number,
- Change of customer or customer's end user contact name of telephone number, and
- Change of jurisdiction.

All other service arrangements, including physical changes to existing services, will be charged as follows:

- If the change involves the addition of an optional feature that has a separate nonrecurring charge, that nonrecurring charge will apply.

ACCESS SERVICE

21.4.9 Rate Categories (Cont'd)

(C) Feature Change Charge

A Feature Change Charge applies for a customer request to change an existing MSFRS Optional Feature for which there is no nonrecurring charge. (Examples: A Feature Change Charge applies for a customer request to change the CIR value associated with an existing DLCI. A Feature Change Charge applies for a customer request to change the CIR value associated with an existing DLCI and related ISAL CIR.)

A Feature Change Charge applies in lieu of standard MSFRS nonrecurring charges for a customer request where no physical work is required to convert the customer's existing service to MSFRS from Exchange Access Frame Relay Service and Special Access; standard MSFRS nonrecurring charges apply for such requests when any physical work is required.

(N)
(N)
(N)

21.4 Managed Shared Frame Relay Service (MSFRS) (Cont'd)

(N)

21.4.9 Rates Categories (Cont'd)

(N)

(B) Optional Features (Cont'd)

(N)

(7) Customer Configuration Management Capability (Cont'd)

(N)

(l) After the customer has established Customer Configuration Management Capability (by ordering Configurable DLCI Bundles to establish the configurable DLCI block for each MSFRS Connection) for their network, the customer will have access thru the NVS system to mechanically add, change and delete configurable PVCs between these Connections.

(N)
(N)
(N)
(N)
(N)
(N)

(m) A Customer Configuration Management service request is made thru NVS for a specific PVC activity (e.g., add configurable PVC, change CIR or endpoint on an existing configurable PVC, delete configurable PVC, etc.) involving MSFRS Connections equipped with Customer Configuration Management Capability. Each Customer Configuration Management service request will be assigned a service request number to facilitate customer questions and to enable status and tracking.

(N)
(N)
(N)
(N)
(N)
(N)
(N)

(n) A Customer Configuration Management service request will be provisioned within minutes; however a Cancellation Window of two hours is allowed after successful provisioning during which time the customer may submit a request thru NVS to cancel or "undo" the request before the change becomes permanent. The customer may specifically request to forgo (close) the Cancellation Window during which a particular service request may be cancelled and commit that NVS make the service request provisioning become permanent immediately. When the Cancellation Window expires without the customer canceling the service request or the customer foregoes/closes the Cancellation Window, the provisioned service request is made permanent and considered a completed transaction.

(N)
(N)
(N)
(N)
(N)
(N)
(N)
(N)
(N)
(N)
(N)

(o) Customer Configuration Management Capability effectively provides the customer near real-time processing capability to allow them to manage the provisioning and change activities for configurable PVCs within their network. However, access to Customer Configuration Management Capability is not guaranteed for customer access and use twenty-four hours a day/seven days a week. Customer access may be periodically preempted for higher priority Company network management and maintenance activities. Customer inability to access the NVS/Customer Configuration Management systems during these periods will not be considered a service outage.

21.4.9 Rates Categories (Cont'd)

(N)

(B) Optional Features (Cont'd)

(N)

(7) Customer Configuration Management Capability (Cont'd)

(N)

(i) Customer Configuration Management Capability may only be utilized to create configurable PVCs between two Frame Relay services equipped with NVS and Customer Configuration Management Capability within the same LATA.

(N)

(N)

(N)

(N)

(j) A customer may request that some or all of the standard DLCIs associated with an existing MSFRS Connection with Customer Configuration Management Capability be converted to Configurable DLCIs. Only standard DLCIs that are mapped to other Network Interfaces also equipped for Customer Configuration Management can be converted (subject to any limitations set forth herein 21.1.9.(B)(6) on what types of MSFRS Connections and PVCs are technically compatible with Customer Configuration Management Capability). The DLCI Conversion Charge is the nonrecurring charge applicable per standard DLCI requested to be converted to a configurable DLCI. Once converted to a configurable DLCI, that DLCI will be counted against the MSFRS Connection configurable DLCI block quantity; monthly rates for the standard DLCI and associated CIR and ISAL CIR will concurrently no longer apply.

(N)

(N)

(N)

(N)

(N)

(N)

(N)

(N)

(N)

(N)

(N)

(N)

(k) A customer may request that some or all of the configurable DLCIs associated with an existing MSFRS Connection with Customer Configuration Management Capability be converted to standard DLCIs which the customer will no longer manage. Such requests will convert the configurable DLCI "as is" to a standard DLCI (i.e., standard additional DLCI with same CIR and ISAL CIR value). The DLCI Conversion Charge is the nonrecurring charge applicable per configurable DLCI requested to be converted to a standard DLCI. Once converted to a standard DLCI, that DLCI (and associated CIR and ISAL CIR) will begin billing the standard DLCI, CIR and ISAL CIR monthly rates and will concurrently no longer count against the configurable DLCI block quantity for that MSFRS Connection.

21.4.9 Rate Categories (Cont'd)

(B) Optional Features (Cont'd)

(2) Committed Information Rate (CIR) (Cont'd)

(M)

Frames submitted at a rate above the subscribed CIR will be marked "discard eligible" (DE) and, should network congestion occur, are subject to being dropped by the network. If CIR is set equal to zero, then all frames will be marked DE. However, in the absence of network congestion, DE marked frames will be transported with the same reliability as frames not marked DE.

(M)
(M)
(M)
(M)
(M)
(M)

Subsequent to the initial provisioning of a PVC, a customer may request that the CIR value be changed. A Feature Change Charge as specified in 21.4.9(C) applies per DLCI per PVC for such requests.

(M)
(M)
(M)

When a specific PVC is requested to be disconnected, the monthly rates appropriate for the CIR of the two DLCIs comprising the PVC will be discontinued.

(M)
(M)
(M)

The CIR value of Priority DLCIs must be greater than zero.

(M)

(3) Inter Service Area Link (ISAL)

The Telephone Company may establish facilities between MSFRS switching equipment in different Service Areas in the same LATA and may allow customers to share bandwidth on these facilities. Where these shared facilities are available to customers, an Inter Service Area Link is an Optional Feature that allows the customer to establish a PVC link between MSFRS Connections in the two different Service Areas.

The customer must request an Inter Service Area Link that provides the extension of a PVC between two Service Areas. Each link has an associated CIR that must match the CIR of the DLCIs associated with the PVC. One end-to-end PVC exists between both customer premises through an Inter Service Area Link.

The appropriate rates and charges for the Inter Service Area Link are from 21.4.10(B)(4) and are applied per end of link. A nonrecurring charge and monthly rate applies for each end of the Inter Service Area Link. The ISAL CIR charges are in addition to the associated DLCI and CIR charges from 21.4.10(B)(1), (2) and (3) that are applicable for the portions of this PVC in each Service Area.

21.4 Managed Shared Frame Relay Service (MSFRS) (Cont'd)

21.4.9 Rate Categories (Cont'd)

(B) Optional Features (Cont'd)

(2) Committed Information Rate (CIR)

Committed Information Rate is a per DLCI feature that enables the customer to select a sustained throughput under normal conditions for the data transmitted within that PVC. A CIR must be selected for each DLCI within a PVC; both CIR values must be the same. The CIR value selected cannot exceed the minimum transmission speed of the MSFRS Connection at either end of the PVC.

A standard CIR rate element is applicable per DLCI¹ when it is to be mapped to another DLCI to form a single PVC. (T)

A Frame Relay to ATM Network Interworking CIR rate element is applicable per DLCI when it is to be mapped to an ATM Service PVC Segment to form a single Frame Relay to ATM Network Interworking PVC. The mapping of a DLCI to an ATM PVC Segment is permitted on a per PVC basis. The Frame Relay data is essentially encapsulated in an ATM Service bit stream and retrieved by the ATM Customer's CPE as Frame Relay. Associated rates and charges for the related ATM Service apply as usual from the appropriate ATM Service tariff. Only Frame Relay DLCIs and ATM PVC Segments of a comparable quality of service can be mapped together to form a single PVC; the specific combinations of Frame Relay DLCIs and ATM PVC Segments permitted to be mapped together are as follows:

<u>Frame Relay DLCI:</u>		<u>ATM PVC Segment²:</u>	(T)
-Non-priority with 0 CIR	and	UBR	
-Non-priority with >0 CIR	and	VBR-NRT	
-Priority with >0 CIR	and	VBR-RT	

The rate elements for standard CIR with a value greater than zero and all Frame Relay to ATM Network Interworking CIR have a separate charge. The CIR rate element applies per DLCI and has a monthly rate only.

Note 1: Not applicable to the standard configurable DLCIs provided within a Configurable DLCI Bundle (which include CIR of up to 64 Kbps per configurable DLCI) associated with optional Customer Configuration Management Capability. (N)
(N)
(N)
(N)

Note 2: Due to technical limitations a mapping combination involving an ATM CBR PVC Segment is not possible. (T)

(2) Committed Information Rate (CIR)

Committed Information Rate is a per DLCI feature that enables the customer to select a sustained throughput under normal conditions for the data transmitted within that PVC. A CIR must be selected for each DLCI within a PVC; both CIR values must be the same. The CIR value selected cannot exceed the minimum transmission speed of the MSFRS Connection at either end of the PVC. (The Frame Relay network's burst capability and discard eligible feature are described in TR 73587.)

(T)
(T)
(T)

A standard CIR rate element is applicable per DLCI¹ when it is to be mapped to another DLCI to form a single PVC.

A Frame Relay to ATM Network Interworking CIR rate element is applicable per DLCI when it is to be mapped to an ATM Service PVC Segment to form a single Frame Relay to ATM Network Interworking PVC. The mapping of a DLCI to an ATM PVC Segment is permitted on a per PVC basis. The Frame Relay data is essentially encapsulated in an ATM Service bit stream and retrieved by the ATM Customer's CPE as Frame Relay. Associated rates and charges for the related ATM Service apply as usual from the appropriate ATM Service tariff. Only Frame Relay DLCIs and ATM PVC Segments of a comparable quality of service can be mapped together to form a single PVC; the specific combinations of Frame Relay DLCIs and ATM PVC Segments permitted to be mapped together are as follows:

Frame Relay DLCI:

ATM PVC Segment²:

-Non-priority with 0 CIR	and	UBR
-Non-priority with >0 CIR	and	VBR-NRT
-Priority with >0 CIR	and	VBR-RT

The rate elements for standard CIR with a value greater than zero and all Frame Relay to ATM Network Interworking CIR have a separate charge. The CIR rate element applies per DLCI and has a monthly rate only.

Note 1: Not applicable to the standard configurable DLCIs provided within a Configurable DLCI Bundle (which include CIR of up to 64 Kbps per configurable DLCI) associated with optional Customer Configuration Management Capability.

Note 2: Due to technical limitations a mapping combination involving an ATM CBR PVC Segment is not possible.

ACCESS SERVICE

21 - Fast Packet Access Services

21.4 Managed Shared Frame Relay Service (MSFRS) (Cont'd)

21.4.9 Rate Categories (Cont'd)

(B) Optional Features

The Optional Features rate category provides for optional features that may be added to MSFRS to improve its quality or utility to meet specific communications requirements.

(1) DLCIs per MSFRS Connection (UNI or NNI)

This feature provides for the assignment of a Data Link Channel Identifier (DLCI) per PVC requested on a MSFRS Connection (UNI or NNI). One DLCI is required per MSFRS Connection in order to form a single PVC. When a DLCI from each of two MSFRS Connections are mapped together through the service provisioning process, a single PVC is created. On an optional basis, a single PVC may also be created via the mapping of a DLCI to an ATM PVC Segment. Multiple DLCIs (and therefore, PVCs) may be associated with a single MSFRS Connection. A Standard PVC is created via the mapping of two Standard DLCIs; on an optional basis, features are available to allow the creation of Priority PVCs and PVCs established via Frame Relay to ATM Network Interworking with an ATM Service network interface. (C)
(C)

One Initial DLCI (either one Initial Standard DLCI or one Initial Priority DLCI) is available with each MSFRS when that DLCI is requested with the installation of the MSFRS Connection. Additional DLCI charges apply for every DLCI after the initial DLCI requested with the MSFRS Connection and for any DLCIs ordered subsequent to the installation of the MSFRS Connection. A nonrecurring charge and monthly rate applies per Additional DLCI requested. A DLCI which is not a Priority DLCI, as discussed following, is referred to as a Standard DLCI.

Priority PVC capability allows a customer to differentiate specific PVCs with regard to the importance of the data within those PVCs as compared to other PVCs. In the case of contention or network congestion, the network will give precedence to the frames of a Priority PVC over frames of a Standard PVC. MSFRS allows the creation of Priority PVCs. Such a Priority PVC is formed by the mapping of two Priority DLCIs (as set forth in 21.4.10(B)(1)); these Priority DLCIs must have an associated CIR value of greater than zero. A request to convert an existing Standard PVC to a Priority PVC (or vice versa) shall be considered as a request to disconnect the existing DLCIs and as a request to connect the new DLCIs.

When a PVC is requested to be disconnected, the monthly rates appropriate for the two DLCIs comprising the PVC will be discontinued.

ACCESS SERVICE

21 - Fast Packet Access Services

21.4 Managed Shared Frame Relay Service (MSFRS) (Cont'd)

21.4.9 Rate Categories (Cont'd)

(B) Optional Features

The Optional Features rate category provides for optional features that may be added to MSFRS to improve its quality or utility to meet specific communications requirements.

(1) DLCIs per MSFRS Connection (UNI or NNI)

This feature provides for the assignment of a Data Link Channel Identifier (DLCI) per PVC requested on a MSFRS Connection (UNI or NNI). One DLCI is required per MSFRS Connection in order to form a single PVC. When a DLCI from each of two MSFRS Connections are mapped together through the service provisioning process, a single PVC is created. Multiple DLCIs (and therefore, PVCs) may be associated with a single MSFRS Connection. A Standard PVC is created via the mapping of two Standard DLCIs; on an optional basis, features are available to allow the creation of Priority PVCs. (C)

One Initial DLCI (either one Initial Standard DLCI or one Initial Priority DLCI) is available with each MSFRS when that DLCI is requested with the installation of the MSFRS Connection. Additional DLCI charges apply for every DLCI after the initial DLCI requested with the MSFRS Connection and for any DLCIs ordered subsequent to the installation of the MSFRS Connection. A nonrecurring charge and monthly rate applies per Additional DLCI requested. A DLCI which is not a Priority DLCI, as discussed following, is referred to as a Standard DLCI. (C)

Priority PVC capability allows a customer to differentiate specific PVCs with regard to the importance of the data within those PVCs as compared to other PVCs. In the case of contention or network congestion, the network will give precedence to the frames of a Priority PVC over frames of a Standard PVC. MSFRS allows the creation of Priority PVCs. Such a Priority PVC is formed by the mapping of two Priority DLCIs (as set forth in 21.4.10(B)(1)); these Priority DLCIs must have an associated CIR value of greater than zero. A request to convert an existing Standard PVC to a Priority PVC (or vice versa) shall be considered as a request to disconnect the existing DLCIs and as a request to connect the new DLCIs. (N)

When a PVC is requested to be disconnected, the monthly rates appropriate for the two DLCIs comprising the PVC will be discontinued.

(B) Optional Features

The Optional Features rate category provides for optional features that may be added to MSFRS to improve its quality or utility to meet specific communications requirements.

(1) DLCIs per MSFRS Connection (UNI or NNI)

This feature provides for the assignment of a Data Link Channel Identifier (DLCI) per PVC requested on a MSFRS Connection (UNI or NNI). One DLCI is required per MSFRS Connection in order to form a single PVC. When a DLCI from each of two MSFRS Connections are mapped together through the service provisioning process, a single PVC is created. Multiple DLCIs (and therefore, PVCs) may be associated with a single MSFRS Connection. One Initial DLCI (USOC: XAFD1) is available with each MSFRS Connection at no additional charge when that DLCI is requested with the installation of the MSFRS Connection. Additional DLCI charges apply for every DLCI after the initial DLCI requested with the MSFRS Connection. A nonrecurring charge and monthly rate applies per Additional DLCI requested.

When a PVC is requested to be disconnected, the monthly rates appropriate for the two DLCIs comprising the PVC will be discontinued.

(2) Committed Information Rate (CIR)

Committed Information Rate is a per DLCI feature that enables the customer to select a sustained throughput under normal conditions for the data transmitted within that PVC. A CIR must be selected for each DLCI within a PVC; both CIR values must be the same. The CIR value selected cannot exceed the minimum transmission speed of the MSFRS Connection at either end of the PVC.

A CIR selected with a value greater than zero has a separate charge from the DLCI charges specified in (1) above. The CIR rate element applies per DLCI and has a monthly rate only.

Frames submitted at a rate above the subscribed CIR will be marked "discard eligible" (DE) and, should network congestion occur, are subject to being dropped by the network. If CIR is set equal to zero, then all frames will be marked DE. However, in the absence of network congestion, DE marked frames will be transported with the same reliability as frames not marked DE.

Subsequent to the initial provisioning of a PVC, a customer may request that the CIR value be changed. A Feature Change Charge as specified in 21.4.9(C) applies per DLCI per PVC for such requests.

When a specific PVC is requested to be disconnected, the monthly rates appropriate for the CIR of the two DLCIs comprising the PVC will be discontinued.

21.4.8 Rate Regulations (cont'd)

Customers must pay Nonrecurring Charges at due date to avoid late payment fees. Credits equal to Nonrecurring Charges that are billed for installation will be applied at the end of the promotional period. No interest will be paid on these credits from payment date to credit date.

21.4.9 Rate Categories

The following rate categories apply to MSFRS:

(A) MSFRS Connections

This rate category provides for the transport from the customer's premises to the MSFRS network. This rate category includes the packet switching function and the connectivity of all MSFRS switches within a MSFRS Service Area. An Initial DLCI is included with each standard or primary MSFRS Connection. A nonrecurring charge and monthly rate applies per standard or primary MSFRS Connection and per MSFRS Back-Up Connection.

(C)
(C)
(C)
(N)

A nonrecurring Primary MSFRS Connection Enablement/Change Charge provided in 21.4.10(F) following is applicable: 1) per existing standard MSFRS Connection requested to be converted to a primary MSFRS Connection (i.e., to be back-up enabled), 2) per existing primary MSFRS Connection requested to be converted to a standard Network Interface (i.e., to disable the capability to be used with a MSFRS Back-Up Connection), and 3) per existing primary MSFRS Connection requested to be reassigned to work with a different MSFRS Back-Up Connection. The Primary MSFRS Connection Enablement/Change Charge shall only be applied when the customer provides the appropriate information on all of the service orders required such that all orders involved can be related and worked together. Failure by the customer(s) to provide adequate information to allow the orders to be appropriately related together will result in the billing of such orders as individual disconnects and new connects.

21.4 Managed Shared Frame Relay Service (MSFRS) (Cont'd)

21.4.8 Rate Regulations (Cont'd)

For a promotional period from January 6, 2004 to April 5, 2004, Non-Recurring (C)
Charges are waived for the following services: 1) BellSouth Exchange Access
ATM Service (XAATMS) and BellSouth Exchange Access Frame Relay Service
(XAFRS) Network Interfaces; 2) BellSouth Managed Shared ATM Service (MSATMS)
and BellSouth Managed Shared Frame Relay Service (MSFRS) Connections; 3)
Network Visibility Service (NVS) Fault Management and On Demand Statistics
and NVS Fault Management, On Demand Statistics and Performance Reports per
Network Interface or Connection. The following criteria must be met:

1. Network Interfaces or Connections ordered under this promotion must remain in place for a minimum of 6 months;
 2. The service application date must occur during the promotion period.
- The Non-Recurring Charge will be assessed if a circuit that has received free installation is disconnected prior to the six-month period expiring.

ACCESS SERVICE

21 - Fast Packet Access Services (N)

21.4 Managed Shared Frame Relay Service (MSFRS) (Cont'd) (N)

21.4.3 Technical Specifications (N)

The provision of MSFRS requires the applicable MSFRS Connection component. In addition, customers may add optional features. Each of the components of the service are described in this Section. (N)

All services installed after the effective date of this tariff will conform to the transmission specification standards in the following references: (N)

- UNI specifications for MSFRS are: (N)

ANSI T1.617-1991, "Integrated Services Digital Network (ISDN) - Digital Subscriber Signaling System No. 1 (DSS1) - Signaling Specification for Frame Relay Service", American National Standards Institute, and ANSI T1.618-1991, "Integrated Services Digital Network (ISDN) - Core Aspects of Frame Relay Bearer Service", American National Standards Institute. (N)

Document No. 001-208966, "Frame Relay Specification with Extension Based on Proposed T1S1 Standards", Digital Equipment Corporation, Northern Telecom, Inc., and StrataCom, Inc. (N)

BellSouth Technical Reference 73587, "Frame Relay Service Interface & Performance Specifications". (N)

- NNI specifications for MSFRS are: (N)

Frame Relay Forum Document FRF.2.1, "Frame Relay Network-to-Network Interface Implementation Agreement". (N)

BellSouth Technical Reference 73587, "Frame Relay Service Interface & Performance Specifications". (N)

EFFECTIVE: DECEMBER 31, 2004

ACCESS SERVICE

(N)

21 - Fast Packet Access Services

(N)

21.4 Managed Shared Frame Relay Service (MSFRS) (Cont'd)

(N)

21.4.2 Service Description (Cont'd)

(N)

(6) Service Level Agreements (Cont'd)

(N)

(e) Service Level Commitments (Cont'd)

(N)

(1) Network Availability Commitment: 99.9% (Cont'd)

(N)

- Total Frame Relay Network - Network Availability: Network Availability for the customer's total network is calculated by subtracting the total unavailable time for all the Frame Relay UNI/NNIs in a specific total calendar month, from the total available time for all the Frame Relay UNI/NNIs in that specific total calendar month, and then dividing the difference by the total available time for all the Frame Relay UNI/NNIs in that specific total calendar month. If the resulting percentage is less than 99.9%, the commitment for Network Availability has been missed; the SLA Network Availability credit will then be issued on any Frame Relay UNI/NNI whose specific individual Network Availability measurement is below 99.9%.
- Individual Frame Relay UNI/NNI - Network Availability: Network Availability for an individual Frame Relay UNI/NNI is calculated by first subtracting the unavailable time from the total available time for a specific calendar month, and then dividing it by the total available time for that specific calendar month. If the Network Availability SLA commitment was missed on the customer's total network and the resulting percentage for a specific individual Frame Relay UNI/NNI is less than 99.9%, the SLA Network Availability credit set forth in 21.4.2(6)(f)(1) will then be issued on that specific individual Frame Relay UNI/NNI.

(2) Network Transit Delay Commitment: 60 milliseconds, one-way

(N)

- The Network Transit Delay commitment is provided for each individual PVC within the customer's Frame Relay network.
- Through the NVS System, Network Transit Delay will measure the average one-way transit time of a specific PVC's frames through the network within a specific calendar month. The transit time for each frame transmitted is measured from the originating Frame Relay UNI/NNI to the terminating Frame Relay UNI/NNI. The measurement for the Network Transit Delay commitment is the average transit time of a frame for a PVC, based upon all the frames transmitted for that PVC during that specific calendar month.

EFFECTIVE: DECEMBER 31, 2004

ACCESS SERVICE

(N)

21 - Fast Packet Access Services

(N)

21.4 Managed Shared Frame Relay Service (MSFRS) (Cont'd)

(N)

21.4.2 Service Description (Cont'd)

(N)

(6) Service Level Agreements (Cont'd)

(N)

(c) (Cont'd)

(N)

- the customer's premises equipment, (N)
- unavailability of the customer's facilities and/or equipment, and (N)
- customer oversubscription of the UNI/NNI beyond 200% (i.e., the sum (N)
of the total CIR of all PVCs carried by any UNI or NNI may not be (N)
greater than 200% of the UNI/NNI Connection speed). (N)

- (d) SLA credits for missed commitments do not apply for situations when (N)
the customer's service is out of operation as a result of scheduled (N)
maintenance windows as set forth in 21.4.2(5) preceding. Time from (N)
such maintenance activity does not count towards the time a service (N)
is considered as unavailable during a calendar month for purposes (N)
of measuring for the Network Availability SLA. (N)

(e) Service Level Commitments (N)

SLA commitments for the specific aspects of the Frame Relay (N)
network's performance set forth in (a) preceding are measured on a (N)
specific calendar month basis. The specific network performance (N)
commitments provided and how their performance is measured through (N)
the NVS system for a calendar month are as follows: (N)

(1) Network Availability Commitment: 99.9% (N)

- The Network Availability commitment is provided on the (N)
customer's total Frame Relay network. Network Availability (N)
will measure the percentage of time during a calendar month (N)
that the customer's Frame Relay network is available. (N)
- Network availability will be measured through the NVS system (N)
for the customer's total Frame Relay network and for each (N)
individual Frame Relay UNI/NNI for a whole calendar month. (N)
- For the purpose of measuring Network Availability, times (N)
during which a Frame Relay UNI/NNI is out of operation in (N)
association with maintenance windows (as set forth in (N)
21.1.2(5)) and in association with situations over which the (N)
Company does not have control (as set forth in 21.4.2(6)(c)) (N)
are counted as "available" time. (N)

ACCESS SERVICE

21 - Fast Packet Access Services

21.4 Managed Shared Frame Relay Service (MSFRS) (Cont'd)

21.4.2 Service Description (Cont'd)

(6) Service Level Agreements (Cont'd)

(c) (Cont'd)

- the customer's premises equipment,
- unavailability of the customer's facilities and/or equipment, and
- customer oversubscription of the UNI/NNI beyond 200% (i.e., the sum of the total CIR of all PVCs carried by any UNI or NNI may not be greater than 200% of the UNI/NNI Connection speed).

- (d) SLA credits for missed commitments do not apply for situations when the customer's service is out of operation as a result of 1) scheduled maintenance windows as set forth in 21.4.2(5) preceding and 2) customer requests for rearrangements which resulted in that service being unavailable as set forth in 21.4.2(3)(a) and (b) preceding. Time from such activity does not count towards the time a service is considered as unavailable during a calendar month for purposes of measuring for the Network Availability SLA. (C) (C)

(e) Service Level Commitments

SLA commitments for the specific aspects of the Frame Relay network's performance set forth in (a) preceding are measured on a specific calendar month basis. The specific network performance commitments provided and how their performance is measured through the NVS system for a calendar month are as follows:

(1) Network Availability Commitment: 99.9%

- The Network Availability commitment is provided on the customer's total Frame Relay network. Network Availability will measure the percentage of time during a calendar month that the customer's Frame Relay network is available.
- Network availability will be measured through the NVS system for the customer's total Frame Relay network and for each individual Frame Relay UNI/NNI for a whole calendar month.
- For the purpose of measuring Network Availability, times during which a Frame Relay UNI/NNI is out of operation in association with maintenance windows (as set forth in 21.1.2(5)) and in association with situations over which the Company does not have control (as set forth in 21.4.2(6)(c)) are counted as "available" time.

EFFECTIVE: OCTOBER 18, 2005

21 - Fast Packet Access Services

(N)

21.4 Managed Shared Frame Relay Service (MSFRS) (Cont'd)

(N)

21.4.2 Service Description (Cont'd)

(N)

(6) Service Level Agreements

(N)

Service Level Agreements (SLAs) provide the Company's service level commitments for specific aspects of its Frame Relay network's performance. SLAs are only provided for customers with at least ten Frame Relay UNIs and or NNIs. Such customers must also subscribe to Network Visibility Service (specifically NVS Fault Management, On Demand Statistics and Performance Reports) which is the primary monitoring and reporting tool used for determining performance results and missed commitments.

(N)
(N)
(N)
(N)
(N)
(N)
(N)

SLA commitments only apply for service wholly within Company territory; SLA commitments will not apply for service which is part of a jointly provided service.

(N)
(N)
(N)

(a) SLA commitments are provided for Network Availability, Network Transit Delay and Frame Delivery Rate.

(N)
(N)

(b) SLA credits are provided for missed commitments, except as specified otherwise in (c) and (d) following. An SLA report is provided through the NVS system that provides details of missed commitments upon which credits will be issued; the SLA report is available on a calendar month basis. Credits are automatically issued based upon the end-of-month SLA report; such credits shall only be issued once a month. The Company's calculation of its performance through the NVS system shall be the sole determinate of the Company's obligation to provide a credit for a missed performance commitment as set forth in this tariff.

(N)
(N)
(N)
(N)
(N)
(N)
(N)
(N)
(N)
(N)

(c) SLA credits for missed commitments do not apply when any commitment is not met because the Company does not have control over the circumstances causing the commitment to be missed. Situations over which the Company does not have control can be defined as, but not limited to the following:

(N)
(N)
(N)
(N)
(N)

- any act, any omission or negligence on the part of the customer, any other customer or any third party, or of any other entity providing a portion of the service,
- labor difficulties, governmental orders, civil commotions, acts of civil or military authority, embargoes, epidemics, declared National Emergencies, criminal actions against the Company, war, terrorist acts, riots, insurrections, fires, explosions, nuclear accidents, power blackouts, acts of God (including, but not limited to, earthquakes, floods or unusually severe weather conditions) or other circumstances beyond the Company's control,

21.4 Managed Shared Frame Relay Service (MSFRS) (Cont'd)

21.4.2 Service Description (Cont'd)

(5) Maintenance

(M)

In order to maintain the quality of MSFRS, the Telephone Company reserves the right to perform preventive maintenance and software updates to the network. This could result in MSFRS being unavailable during the time period between 2:00 A.M. and 4:00 A.M. Eastern Time on the specific days as set forth by state in the following chart. The Telephone Company only expects to utilize this maintenance window for any given switch on the average of once a quarter. However, the Telephone Company reserves the right to perform maintenance at any time at its discretion that it believes such maintenance is necessary. The Telephone Company will make a reasonable effort to provide notice to those customers likely to be affected by such maintenance work.

21.4.2 Service Description

(1) Installation of Service

Nonrecurring charges apply to each MSFRS Connection installed.

Nonrecurring charges for MSFRS Connections are set forth in 21.4.10(A) following.

(2) Installation of Optional Features

Nonrecurring charges apply to the installation of Optional Features as set forth in 21.4.10(B) following.

(3) Service Rearrangements

Service rearrangements are changes to existing (installed) services that do not result in a change in the minimum period requirements as set forth in 5.6(E) preceding. Changes that result in the establishment of new minimum period obligations are treated as disconnects and starts. A change that results from a transfer of service is described and charged as set forth in (4) and 21.4.10(D) following.

(4) Transfer of Service

When a change in billing data (e.g., name, address, contract name, or telephone number) is requested in association with a change in the customer's record, transfer of service charges, as set forth in 21.4.10(D) following will apply. Charges are applied on a Billing Account Number (BAN).

(5) Maintenance

In order to maintain the quality of MSFRS, the Telephone Company reserves the right to perform preventive maintenance and software updates to the network. This could result in MSFRS being unavailable during the time period between 2:00 A.M. and 4:00 A.M. Eastern Time on any given Wednesday or Sunday morning. The Telephone Company only expects to utilize this maintenance window for any given switch on the average of once a quarter. However, the Telephone Company reserves the right to perform maintenance at any time at its discretion that it believes such maintenance is necessary. The Telephone Company will make a reasonable effort to provide notice to those customers likely to be affected by such maintenance work.

(N)

In LATAs where there are multiple MSFRS Service Areas, the customer may
utilize a MSFRS Inter Service Area Link to have connectivity on a per PVC
basis between MSFRS Connections in each Service Area. The inter service area
portion of such a PVC is provisioned over a facility provided by the Telephone
Company which allows customers to share bandwidth on these facilities that
connect the two MSFRS Service Areas. This Optional Feature is called an Inter
Service Area Link. Information provided in Appendix A of this tariff may be
used to determine if two MSFRS Connections (based upon their associated
customer premises serving wire centers) are in two different Service Areas
within the same LATA and, therefore, require an Inter Service Area Link to
form a PVC between them.

ACCESS SERVICE

21 - Fast Packet Access Services

21.4 Managed Shared Frame Relay Service (MSFRS) (Cont'd)

21.4.1 General Description (Cont'd)

MSFRS Connections are available with two types of network interfaces on the Frame Relay switch - a user network interface (UNI) and a network-to-network interface (NNI). A UNI is a standard interface used to connect the customer to the Frame Relay switch in the MSFRS network; it receives the data frame from the customer's network or device and verifies that the data link channel identifier is valid before relaying the frame to the destination. An NNI specifies how a Frame Relay switch within the MSFRS network sends and receives data to/from another Frame Relay switch.

MSFRS Connections are offered with either a UNI or NNI at transmission speeds of 56 Kbps, 64 Kbps, 112 Kbps, 128 Kbps, 192 Kbps, 256 Kbps, 320 Kbps, 384 Kbps, 448 Kbps, 512 Kbps, 576 Kbps, 640 Kbps, 704 Kbps, 768 Kbps, 1024 Kbps, 1152 Kbps, 1.536 Mbps and 44.210 Mbps.

(C)
(C)
(C)

A MSFRS Connection (by transmission speed and network interface type) is appropriate for a customer whose premises serving wire center is inside the MSFRS Service Area.

Where a customer premises serving wire center is outside the MSFRS Service Area (but within the same LATA), a MSFRS Extended Connection (by transmission speed and network interface type) is applicable based upon the mileage from the customer's serving wire center to the closest Service Area Point as designated by the Telephone Company (which is a central office inside the MSFRS Service Area). Six MSFRS Extended Connections are available which reflect mileage bands outside the Service Area. These mileage bands are: Over 0 to 20 miles, over 20 to 50 miles, over 50 to 75 miles, over 75 to 100 miles, over 100 to 125 miles and over 125 miles. These bands represent the airline mileage from the customer's serving wire center to the closest Service Area Point.

Information required to determine which Service Area is associated with a specific customer premises serving wire center and whether a specific customer premises serving wire center is inside a Service Area or requires a MSFRS Extended Connection is available from Appendix A of this tariff. If the serving wire center is outside a MSFRS Service Area, the V&H coordinates of the customer's serving wire center and the closest Service Area Point are utilized in calculating the airline mileage to determine the appropriate mileage band for the MSFRS Extended Connection.

In LATAs where there are multiple MSFRS Service Areas, the customer may utilize a MSFRS Inter Service Area Link to have connectivity on a per PVC basis between MSFRS Connections in each Service Area. The inter service area portion of such a PVC is provisioned over a facility provided by the Telephone Company which allows customers to share bandwidth on these facilities that connect the two MSFRS Service Areas. This Optional Feature is called an Inter Service Area Link. Information provided in Appendix A of this tariff may be used to determine if two MSFRS Connections (based upon their associated customer premises serving wire centers) are in two different Service Areas within the same LATA and, therefore, require an Inter Service Area Link to form a PVC between them.

ACCESS SERVICE

21 - Fast Packet Access Services

(N)

21.4 Managed Shared Frame Relay Service (MSFRS)

(N)

21.4.1 General Description

(N)

Managed Shared Frame Relay Service (MSFRS) provides total premises to switch connectivity to BellSouth's Frame Relay network through Network-to-Network Interfaces (NNI) or User-to-Network Interfaces (UNI) on the frame relay switch. MSFRS is a connection oriented packet-switched data service allowing for the interconnection of local area networks or other compatible customer equipment. Efficient throughput at various transmission speeds is performed. MSFRS allows for the transfer of variable length frames called packets. Frames are relayed by virtual connections; frames travel a fixed path through the network although bandwidth is not dedicated to each virtual connection.

(N)
(N)
(N)
(N)
(N)
(N)
(N)
(N)
(N)
(N)

MSFRS is a service under which the customer assigns to the Telephone Company the responsibility for facility design, engineering and routing of frame relay services in a MSFRS Service Area. A MSFRS Service Area is comprised of all the central offices in a geographic area (e.g., a large metropolitan area) as defined by the Telephone Company; these central offices are referred to as Service Area Points (SAP). The Telephone Company undertakes the responsibility to route the service from the customer's premises to the MSFRS network using whatever facilities and switch placement designs within the Service Area that would best deliver quality service. MSFRS facilities are stand-alone facilities and may not be provisioned over a customer's higher capacity Special Access facilities.

(N)
(N)
(N)
(N)
(N)
(N)
(N)
(N)
(N)
(N)
(N)

The rate structure for MSFRS is comprised of MSFRS Connections and Optional Features.

(N)
(N)

The primary MSFRS rate element is the MSFRS Connection. This rate element provides the transport from the customer's premises to the MSFRS network. All frame relay switches within the MSFRS Service Area are linked together to form the MSFRS network which is accessible through a MSFRS Connection.

(N)
(N)
(N)
(N)

MSFRS uses permanent virtual circuits (PVCs). A PVC is a logical channel from one MSFRS Connection to another MSFRS Connection (or to a network interface associated with Exchange Access Frame Relay Service). MSFRS utilizes an address field called the Data Link Connection Identifier (DLCI). A DLCI specifies a virtual connection associated with a specific MSFRS Connection. The mapping of two DLCIs through the service provisioning process creates a single PVC. The initial DLCI is included with the MSFRS Connection rate element, and additional DLCIs are available as Optional Features.

(N)
(N)
(N)
(N)
(N)
(N)
(N)
(N)

The appropriate rate for a MSFRS Connection is dependent upon the type of network interface requested, the transmission speed requested and whether or not the customer's serving wire center is in the MSFRS Service Area.

21.3 BellSouth Exchange Access Asynchronous Transfer Mode Service (XAATMS)
(Cont'd)

(N)

(N)

21.3.9 Rate Categories (Cont'd)

(N)

(C) Feature Change Charge

(M)

A Feature Change Charge applies for a customer request to change an existing BellSouth XAATMS PVC Feature from Section 21.3.10 (B) for which there is no nonrecurring charge. (Examples: A Feature Change Charge applies when a customer requests a change in the ATM PVC segment bandwidth required on an existing non-UBR ATM PVC. A Feature Change Charge applies when a customer requests that UBR Service Activation be added to an existing Network Interface which currently is not activated to carry UBR ATM PVCs if the request does not also include an order for a UBR ATM PVC Segment which carries a nonrecurring charge. A customer request to change the service category of an existing CBR ATM PVC to a VBR-RT ATM PVC would not involve a Feature Change Charge but would be treated as a disconnect of the CBR ATM PVC and a new request for a VBR-RT ATM PVC for which there is a nonrecurring charge.)

(M)

(M)

(M)

(M)

(M)

(M)

(M)

(M)

(M)

(M)

(M)

(M)

Only one Feature Change Charge applies per customer request that involves changes to multiple existing ATM PVC's of the same ATM PVC service category that are provisioned out of the same BellSouth XAATMS switch. (For example, one Feature Change Charge would apply per customer request to change the ATM PVC segment bandwidth associated with two existing CBR ATM PVCs provisioned out of the same BellSouth XAATMS switch.)

21.3 BellSouth Exchange Access Asynchronous Transfer Mode Service (XAATMS) (N)
(Cont'd)

21.3.9 Rate Categories (Cont'd) (N)

(B) PVC Features (N)

The PVC Features rate category provides for the ordering and provisioning of ATM PVCs in association with the BellSouth XAATMS network interface. (N)
(N)
(N)

The rates for PVC Features may vary by ATM PVC service category and are listed in Section 21.3.10 by applicable ATM PVC service category. (N)
(N)

(1) ATM PVC Segment Charge - An ATM PVC Segment Charge applies for each ATM PVC segment established over a network interface. An ATM PVC Segment Charge applies under all ATM PVC service categories. (N)
(N)
(N)

(2) ATM PVC Segment Bandwidth Charge - An ATPVC Segment Bandwidth Charge is required per ATM PVC segment established under the CBR or VBR ATM PVC service category (but is not applicable to UBR ATM PVCs). ATM PVC bandwidth represents BellSouth XAATMS network resources required for the non-UBR ATM PVC and is based on the non-UBR ATM PVC's traffic parameters (i.e., PCR, SCR, and MBS). The total charge for this rate element per segment is determined by multiplying the non-UBR ATM PVC segment bandwidth by the ATM PVC Segment Bandwidth Charge, either Per Megabit or Per Increment of 64 Kbps (as appropriate per Section 21.3.1(D)). (N)
(N)
(N)
(N)
(N)
(N)
(N)
(N)
(N)
(N)

(3) UBR Service Activation Charge - A UBR Service Activation is applicable for each network interface over which UBR ATM PVC(s) will traverse. One charge is applicable per network interface regardless of how many UBR ATM PVC's will traverse that network interface. (N)
(N)
(N)
(N)

(C) Feature Change Charge (N)

A Feature Change Charge applies for a customer request to change an existing BellSouth XAATMS PVC Feature from Section 21.3.10 (B) for which there is no nonrecurring charge. (Examples: A Feature Change Charge applies when a customer requests a change in the ATM PVC segment bandwidth required on an existing non-UBR ATM PVC. A Feature Change Charge applies when a customer requests that UBR Service Activation be added to an existing Network Interface which currently is not activated to carry UBR ATM PVCs if the request does not also include an order for a UBR ATM PVC Segment which carries a nonrecurring charge. A customer request to change the service category of an existing CBR ATM PVC to a VBR-RT ATM PVC would not involve a Feature Change Charge but would be treated as a disconnect of the CBR ATM PVC and a new request for a VBR-RT ATM PVC for which there is a nonrecurring charge.) (N)
(N)
(N)
(N)
(N)
(N)
(N)
(N)
(N)
(N)
(N)

Only one Feature Change Charge applies per customer request that involves changes to multiple existing ATM PVC's of the same ATM PVC service category that are provisioned out of the same BellSouth XAATMS switch. (For example, one Feature Change Charge would apply per customer request to change the ATM PVC segment bandwidth associated with two existing CBR ATM PVCs provisioned out of the same BellSouth XAATMS switch.) ACCESS SERVICE

21 - Fast Packet Access Services

21.3.8 Rate Regulations(cont'd)

For a promotional period from January 11, 2002 to April 10, 2002, customers may receive a credit for BellSouth Exchange Access ATM Service(XAATMS), BellSouth Exchange Access Frame Relay Service(XAFRS), BellSouth Managed Shared ATM Service(MSATMS) and BellSouth Managed Shared Frame Relay Service(MSFRS) Nonrecurring Charges for new ATM user-to-network interfaces(UNIs) and/or new Frame Relay network-to-network interface(NNIs) of DS1 or higher speed, provided the following criteria are met:

1. New ATM UNIs and/or Frame Relay NNIs are XAATMS, XAFRS, MSFRS, and/or MSATMS connections;
2. These new ATM UNIs and/or new Frame Relay NNIs must be ordered in at least 10 LATAS;
3. Five or more of these new ATM UNIs and/or new Frame Relay NNIs must be speeds of DS3 or higher
4. XAATMS and XAFRS connections must be ordered under the Fast Packet Services Payment Plan, Plan B(25-48 months) or a Fast Packet Savings Plan;
5. MSFRS and MSATMS connections must be ordered under a Fast Packet Savings Plan;
6. Installation must be completed by May 10, 2002.

Customers must pay Nonrecurring Charges at due date to avoid late payment fees. Credits equal to Nonrecurring Charges that are billed for installation will be applied at the end of the promotional period. No interest will be paid on these credits from payment date to credit date.

BellSouth XAATMS is available for use with the Fast Packet Savings Plan subject to the regulations provided in 2.4.8(F) preceding.

21.3.9 Rate Categories

The following rate categories apply to BellSouth XAATMS:

(A) Network Interface

This rate category provides for the customer's termination on the BellSouth XAATMS switch. The Network Interface rate category includes the BellSouth XAATMS switching function. A recurring rate and nonrecurring charge is provided in 21.3.10 following for each transmission speed of standard or primary Network Interface and Back-Up Network Interface.

21.3 BellSouth Exchange Access Asynchronous Transfer Mode Service (XAATMS) (Cont'd)

21.3.4 Interface Specifications

In accordance with the interface specifications set forth in BellSouth TR 73585, the following is available with BellSouth XAATMS:

ATM Cell-switched (UNI)

21.3.5 Acceptance Testing

At no additional charge, and at the customer's request, the Telephone Company will cooperatively test at the time of installation.

21.3.6 Ordering Options and Conditions

The Access Order, as set forth in Section 5 preceding, is used in the provisioning of BellSouth XAATMS. Also included in that Section are other charges which may be associated with ordering BellSouth XAATMS (e.g., Service Date Change Charges, Cancellation Charges, etc.).

21.3.7 Minimum Period of Service

The minimum period per BellSouth XAATMS rate element selected is one month.

21.3.8 Rate Regulations

Rates and charges are specified in 21.3.10 following for the ordering and provisioning of BellSouth XAATMS. BellSouth XAATMS is available under the Fast Packet Services Payment Plan (SPP) as specified in 2.4.8(C) preceding.

For a promotional period from January 6, 2004 to April 5, 2004, Non-Recurring (C) Charges are waived for the following services: 1) BellSouth Exchange Access ATM Service (XAATMS) and BellSouth Exchange Access Frame Relay Service (XAFRS) Network Interfaces; 2) BellSouth Managed Shared ATM Service (MSATMS) and BellSouth Managed Shared Frame Relay Service (MSFRS) Connections; 3) Network Visibility Service (NVS) Fault Management and On Demand Statistics and NVS Fault Management, On Demand Statistics and Performance Reports per Network Interface or Connection. The following criteria must be met:

1. Network Interfaces or Connections ordered under this promotion must remain in place for a minimum of 6 months;
2. The service application date must occur during the promotion period.

The Non-Recurring Charge will be assessed if a circuit that has received free installation is disconnected prior to the six-month period expiring.

(N)

21.3 BellSouth Exchange Access Asynchronous Transfer Mode Service (XAATMS)
(Cont'd)

(N)

(N)

21.3.2 Service Description (Cont'd)

(N)

(F) Service Level Agreements (Cont'd)

(N)

(6) Credits for Missed SLA Commitments

(N)

The following credits are provided for SLA performance commitments missed during a calendar month subject to the conditions outlined herein 21.3.2(F).

(N)

(N)

(N)

Total SLA credits issued for an individual ATM UNI in a specific calendar month cannot exceed the total monthly recurring charges billed for that ATM UNI (i.e., cannot exceed the sum of the monthly billing for the XAATMS Network Interface rate element plus any rate elements for features).

(N)

(N)

(N)

(N)

(N)

(a) Network Availability SLA Credit¹:

(N)

- This credit is appropriate when the Network Availability commitment for the customer's total network is missed; this credit is then applied per individual ATM UNI that does not specifically meet the Network Availability commitment.
- For each individual ATM UNI not meeting this commitment for a specific calendar month, a credit equal to 1/30 of its monthly recurring charge for the XAATMS Network Interface rate element will be issued.

(N)

(N)

(N)

(N)

(N)

(N)

(N)

(N)

(b) Cell Delivery Rate SLA Credit¹:

(N)

- This credit is applied per individual ATM PVC (i.e., PVC Segment pair forming the PVC) that does not meet the Cell Delivery Rate commitment.
- For each PVC not meeting this commitment for a specific calendar month, a credit equal to \$5.00 for the affected PVC Segment pair will be issued.

(N)

(N)

(N)

(N)

(N)

(N)

(N)

(c) Cell Loss Ratio SLA Credit¹:

(N)

- This credit is applied per individual ATM PVC (i.e., PVC Segment pair forming the PVC) that does not meet the Cell Loss Ratio commitment.
- For each PVC not meeting this commitment for a specific calendar month, a credit equal to \$5.00 for the affected PVC Segment pair will be issued.

(N)

(N)

(N)

(N)

(N)

(N)

(N)

Note 1: This credit will be reduced by the applicable Fast Packet Savings Plan (FSP) discount if the customer has an FSP agreement.

(N)

(F) Service Level Agreements (Cont'd)

(N)

(5) Service Level Commitments (Cont'd)

(N)

(b) Cell Delivery Rate Commitment: by PVC Category of Service (Cont'd)

(N)

- Through the NVS System, Cell Delivery Rate will measure the percentage of cells successfully delivered for a CBR or VBR PVC during a specific calendar month. The Cell Delivery Rate measures the quantity of cells received versus quantity of cells transmitted during a specific calendar month between the two ATM UNIs forming the PVC (i.e., the difference in cells transmitted versus received are considered "lost").

(N)

(N)

(N)

(N)

(N)

(N)

- The monthly Cell Delivery Rate for a qualifying PVC in a specific calendar month is determined by subtracting the total cells lost from the total cells transmitted, divided by the total cells transmitted. If the resulting percentage representing the percent of cells delivered for that PVC is less than the specific commitment for that PVC class of service, this commitment has been missed and the Cell Delivery Rate credit set forth in 21.3.2(F)(6)(b) will then be issued on this ATM PVC.

(N)

(N)

(N)

(N)

(N)

(N)

(N)

(c) Cell Loss Ratio Commitment: 1%

(N)

- A Cell Loss Ratio commitment is provided on a per PVC basis for every ATM PVC.

(N)

(N)

- Through the NVS system, Cell Loss Ratio will measure the percentage of transmitted cells not delivered (or lost) for a PVC during a specific calendar month. The Cell Loss Ratio measures the quantity of cells lost versus the quantity of cells transmitted during a specific calendar month between the two ATM UNIs forming the PVC (i.e., the difference in cells transmitted versus received are considered "lost").

(N)

(N)

(N)

(N)

(N)

(N)

(N)

- The monthly Cell Loss Ratio for a PVC in a specific calendar month is determined by dividing the quantity of cells lost (determined by subtracting the quantity of cells received from the quantity of cells transmitted) by the quantity of cells transmitted during that calendar month. If the resulting percentage representing the percent of cells lost for the PVC is greater than 1%, this commitment has been missed and the Cell Delivery Rate credit set forth in 21.3.2(F)(6)(c) will then be issued on this ATM PVC based upon its category of service.

ACCESS SERVICE

21 - Fast Packet Access Services

21.3 BellSouth Exchange Access Asynchronous Transfer Mode Service (XAATMS)
(Cont'd)

21.3.2 Service Description (Cont'd)

(F) Service Level Agreements

(3) (Cont'd)

- the customer's premises equipment,
- unavailability of the customer's facilities and/or equipment, and
- customer oversubscription of the ATM UNI beyond 200%, calculated as the total VBR equivalent bandwidth on all PVCs carried by the ATM UNI (after the CBR bandwidth is subtracted) may not be greater than 200% of the ATM UNI Network Interface speed.

- (4) SLA credits for missed commitments do not apply for situations when the customer's service is out of operation as a result of scheduled maintenance windows as set forth in 21.3.2(E) preceding. Time from such maintenance activity does not count towards the time a service is considered as unavailable during a calendar month for purposes of measuring for the Network Availability SLA.

(5) Service Level Commitments

SLA commitments for the specific aspects of the ATM network's performance set forth in (1) preceding are measured on a specific calendar month basis. The specific network performance commitments provided and how their performance is measured through the NVS system for a calendar month are as follows:

(a) Network Availability Commitment: 99.9%

- The Network Availability commitment is provided on the customer's total ATM network. Network Availability will measure the percentage of time during a calendar month that the customer's ATM network is available.
- Network availability will be measured through the NVS system for the customer's total ATM network and for each individual ATM UNI for a whole calendar month.
- For the purpose of measuring Network Availability, times during which an ATM UNI is out of operation in association with maintenance windows (as set forth in 21.3.2(E)) and in association with situations over which the Company does not have control (as set forth in 21.3.2(F)(3)) are counted as "available" time.

ACCESS SERVICE

21 - Fast Packet Access Services

21.3 BellSouth Exchange Access Asynchronous Transfer Mode Service (XAATMS) (Cont'd)

21.3.2 Service Description (Cont'd)

(F) Service Level Agreements

(Cont'd)

(N)

(N)

21.3.2 Service Description (Cont'd)

(N)

(F) Service Level Agreements

(N)

Service Level Agreements (SLAs) provide the Company's service level commitments for specific aspects of its ATM network's performance. SLAs are only provided for customers with at least ten ATM UNIs. Such customers must also subscribe to Network Visibility Service (specifically NVS Fault Management, On Demand Statistics and Performance Reports) which is the primary monitoring and reporting tool used for determining performance results and missed commitments.

(N)

(N)

(N)

(N)

(N)

(N)

(N)

SLA commitments only apply for service wholly within Company territory; SLA commitments will not apply for service which is part of a jointly provided service.

(N)

(N)

(N)

- (1) SLA commitments are provided for Network Availability, Cell Delivery Rate and Cell Loss Ratio.

(N)

(N)

- (2) SLA credits are provided for missed commitments, except as specified otherwise in (3) and (4) following. An SLA report is provided through the NVS system that provides details of missed commitments upon which credits will be issued; the SLA report is available on a calendar month basis. Credits are automatically issued based upon the end-of-month SLA report; such credits shall only be issued once a month. The Company's calculation of its performance through the NVS system shall be the sole determinate of the Company's obligation to provide a credit for a missed performance commitment as set forth in this tariff.

(N)

(N)

(N)

(N)

(N)

(N)

(N)

(N)

(N)

(N)

- (3) SLA credits for missed commitments do not apply when any commitment is not met because the Company does not have control over the circumstances causing the commitment to be missed. Situations over which the Company does not have control can be defined as, but not limited to the following:

(N)

(N)

(N)

(N)

(N)

(N)

- any act, any omission or negligence on the part of the customer, any other customer or any third party, or of any other entity providing a portion of the service,

(N)

(N)

(N)

- labor difficulties, governmental orders, civil commotions, acts of civil or military authority, embargoes, epidemics, declared National Emergencies, criminal actions against the Company, war, terrorist acts, riots, insurrections, fires, explosions, nuclear accidents, power blackouts, acts of God (including, but not limited to, earthquakes, floods or unusually severe weather conditions) or other circumstances beyond the Company's control,

21.3.1 General Description (Cont'd)

(D) ATM PVC Segment Bandwidth (Cont'd)

The following table illustrates the ATM PVC segment equivalent bandwidth calculation for each non-UBR type ATM PVC with 1 megabit of bandwidth.

ATM PVC Service Category	Equivalent Bandwidth	Traffic Parameters			
		Peak Cell Rate (Cells/Sec)	Sustainable Cell Rate (Cells/Sec)	Maximum Burst Size (Cells)	
CBR	1 Megabit	2358	N/A	N/A	(T)
VBR-RT	1 Megabit	3906	1953	32	(T)
VBR-NRT	1 Megabit	4975	1244	100	(T)

21.3.2 Service Description

(A) Installation of Service

Nonrecurring charges apply to each BellSouth XAATMS UNI installed.

Nonrecurring charges for the Network Interface elements are set forth in 21.3.10(A) following.

(B) Installation of Features

Nonrecurring charges apply to each ATM PVC segment by ATM PVC service category as set forth in 21.3.10(B) following.

(C) Service Rearrangements

Service rearrangements are changes to existing (installed) services which do not result in a change in the minimum period requirements as set forth in 5.6(E) preceding. Changes which result in the establishment of new minimum period obligations are treated as disconnects and starts. A change which results from a transfer of service is described and charged as set forth in (D) and 21.3.10(D) following.

ACCESS SERVICE

21 - Fast Packet Access Services

21.3 BellSouth Exchange Access Asynchronous Transfer Mode Service (XAATMS)
(Cont'd)

21.3.1 General Description (Cont'd)

(D) ATM PVC Segment Bandwidth

An ATM PVC Segment Bandwidth Charge is applicable for each CBR or VBR ATM PVC segment. Such non-UBR ATM PVC equivalent bandwidth represents the BellSouth XAATMS network resources based on the ATM PVC's traffic parameters. The ATM PVC Segment Bandwidth Charge is derived by multiplying the ATM PVC segment's equivalent bandwidth (calculation following) by the appropriate ATM PVC Segment Bandwidth Charge (expressed in megabits or increments of 64 Kbps as described following).

The following calculations are applicable for determining non-UBR ATM PVC segment bandwidth based upon the ATM PVC category of service.

- (1) CBR equivalent bandwidth is equal to the PCR (cells/sec) times 0.000424. PCR is equal to increments of 64 Kbps of equivalent bandwidth times 150.943, or megabits of equivalent bandwidth times 2358.491. (T)
(T)
- (2) VBR-RT equivalent bandwidth is equal to the SCR (cells/sec) times 0.000512. For VBR-RT, service, the PCR is fixed at 200% of the SCR and the MBS is fixed at 32 cells/second. SCR is equal to increments of 64 Kbps of equivalent bandwidth times 125.000, or megabits of equivalent bandwidth times 1953.125. (T)
(T)
- (3) VBR-NRT equivalent bandwidth is equal to the SCR (cells/sec) times 0.000804. For VBR-NRT service, the PCR is fixed at 400% of the SCR and the MBS is fixed at 100 cells/second. SCR is equal to increments of 64 Kbps of equivalent bandwidth times 79.602, or megabits of equivalent bandwidth times 1243.781. (T)
(T)

Where the result from the ATM PVC segment equivalent bandwidth calculation is greater than 1.536 Mbps, the value is expressed in units of megabits and (if a fraction of a megabit) is rounded up to the next whole megabit. This bandwidth is multiplied by the Per Megabit Bandwidth Charge.

Where the result from the ATM PVC segment equivalent bandwidth calculation is less than or equal to 1.536 Mbps, that number should be divided by .064 Mbps to arrive at a quantity of 64 Kbps increments. If the resulting number is not a whole number, it is rounded up to the next whole number and represents the number of 64 Kbps increments that should be utilized in the derivation of the PVC Segment Bandwidth Charge. This bandwidth is multiplied by the Per Increment of 64 Kbps Bandwidth Charge.

EFFECTIVE: JUNE 6, 1998

ACCESS SERVICE

21 - Fast Packet Access Services

21.3 BellSouth Exchange Access Asynchronous Transfer Mode Service (XAATMS) (N)
(Cont'd) (N)

21.3.1 General Description (Cont'd) (N)

(D) ATM PVC Segment Bandwidth (N)

An ATM PVC Segment Bandwidth Charge is applicable for each CBR or VBR ATM PVC segment. Such non-UBR ATM PVC equivalent bandwidth represents the BellSouth XAATMS network resources based on the ATM PVC's traffic parameters. The ATM PVC Segment Bandwidth Charge is derived by multiplying the ATM PVC segment's equivalent bandwidth (calculation following) by the appropriate ATM PVC Segment Bandwidth Charge (expressed in megabits or increments of 64 Kbps as described following). (N)

The following calculations are applicable for determining non-UBR ATM PVC segment bandwidth based upon the ATM PVC category of service. (N)

- (1) CBR equivalent bandwidth is equal to the PCR (cells/sec) times 0.000424. PCR is equal to increments of 64 Kbps of equivalent bandwidth times 151, or megabits of equivalent bandwidth times 2358. (N)
- (2) VBR-RT equivalent bandwidth is equal to the SCR (cells/sec) times 0.000512. For VBR-RT, service, the PCR is fixed at 200% of the SCR and the MBS is fixed at 32 cells/second. SCR is equal to increments of 64 Kbps of equivalent bandwidth times 125, or megabits of equivalent bandwidth times 1953. (N)
- (3) VBR-NRT equivalent bandwidth is equal to the SCR (cells/sec) times 0.000804. For VBR-NRT service, the PCR is fixed at 400% of the SCR and the MBS is fixed at 100 cells/second. SCR is equal to increments of 64 Kbps of equivalent bandwidth times 79, or megabits of equivalent bandwidth times 1243. (N)

Where the result from the ATM PVC segment equivalent bandwidth calculation is greater than 1.536 Mbps, the value is expressed in units of megabits and (if a fraction of a megabit) is rounded up to the next whole megabit. This bandwidth is multiplied by the Per Megabit Bandwidth Charge. (N)

Where the result from the ATM PVC segment equivalent bandwidth calculation is less than or equal to 1.536 Mbps, that number should be divided by .064 Mbps to arrive at a quantity of 64 Kbps increments. If the resulting number is not a whole number, it is rounded up to the next whole number and represents the number of 64 Kbps increments that should be utilized in the derivation of the PVC Segment Bandwidth Charge. This bandwidth is multiplied by the Per Increment of 64 Kbps Bandwidth Charge. (N)

EFFECTIVE: JUNE 6, 1998

ACCESS SERVICE

21 - Fast Packet Access Services

21.3 BellSouth Exchange Access Asynchronous Transfer Mode Service (XAATMS)
(Cont'd)

(N)

21.3.1 General Description (Cont'd)

(B) ATM PVC Service Categories (Cont'd)

- (3) Variable Bit Rate - Non-Real Time (VBR-NRT): VBR-NRT allows for an ATM PVC that can tolerate larger cell delay variations than VBR-RT. For example, VBR-NRT would be utilized for applications such as data file transfers. The customer specifies the bandwidth required for each VBR-NRT ATM PVC when it is ordered. (N)
- (4) Unspecified Bit Rate (UBR): UBR allows for an ATM PVC where the user does not require one of the ATM PVC service categories described in (1) through (3) preceding. For example, UBR would be utilized where the customer seeks a low cost method of transporting bursty data for non-critical applications that can tolerate delay variations. The Company will attempt to deliver all ATM cells received via UBR ATM PVCs; however, network congestion will result in loss of ATM cells. (N)

(C) ATM PVC Traffic Parameters

In accordance with the technical specifications for BellSouth XAATMS set forth in the technical publications referenced herein Section 21.3.3, each non-UBR type ATM PVC has a set of traffic parameters to describe the characteristics of the information being transmitted. Fixed values for these traffic parameters are derived from the ATM PVC bandwidth specified by the customer for each ATM PVC. These parameters are: (N)1 (N) (N)

- (1) Peak Cell Rate (PCR): The PCR, in cells/second, is an upper bound on the source traffic that can be submitted on a BellSouth XAATMS network interface. PCR is a traffic parameter considered for both CBR and VBR service categories. (N) (N) (N) (N)

PCR is the only traffic parameter considered for a CBR ATM PVC; the equivalent bandwidth per CBR ATM PVC equals the PCR, in cells/second, times 0.000424. (N) (N) (N)

PCR is one of three traffic parameters considered for a VBR ATM PVC. For a VBR-RT PVC, PCR is 200% of the SCR described following. For VBR-NRT, PCR is 400% of the SCR described following. (N) (N) (N)

- (2) Sustainable Cell Rate (SCR): The SCR, in cells/second, is an upper bound on the conforming average cell rate of a BellSouth XAATMS network interface over time. (N) (N) (N)

SCR is a traffic parameter considered only for a VBR ATM PVC. The equivalent bandwidth per VBR-RT ATM PVC is equal to the SCR, in cells/second, times 0.000512. The bandwidth per VBR-NRT ATM PVC is equal to the SCR, in cells/second, times 0.000804. (N) (N) (N) (N)

- (3) Maximum Burst Size (MBS): MBS is the maximum number of consecutive cells that may be transmitted at the peak cell rate. (N) (N)

MBS is a traffic parameter considered only for a VBR ATM PVC. For a VBR-RT ATM PVC, the MBS is fixed at 32 cells/second. For a VBR-NRT ATM PVC, the MBS is fixed at 100 cells/second. (N) (N) (N)

EFFECTIVE: DECEMBER 31, 2002

ACCESS SERVICE

21 - Fast Packet Access Services

21.3 BellSouth Exchange Access Asynchronous Transfer Mode Service (XAATMS)
(Cont'd)

21.3.1 General Description (Cont'd)

The following provides additional information on the terms used to describe the attributes of BellSouth XAATMS with respect to the PVC Feature Charges which apply for ATM PVC traffic. Information is provided regarding ATM PVC segment, ATM PVC service categories, ATM PVC traffic parameters, and ATM PVC segment bandwidth.

(A) ATM PVC Segment

For BellSouth XAATMS, the ATM PVC segment defines the logical path between a customer's premises and the network interface on the BellSouth XAATMS switch. An ATM PVC segment must be provisioned by the Company via service order activity and remain in place until requested to be removed by the customer. For BellSouth XAATMS, two ATM PVC segments are mapped together through the BellSouth XAATMS switch to create an ATM PVC representing a virtual channel through the BellSouth XAATMS network.

(B) ATM PVC Service Categories

ATM PVC service categories are established to support the service requirements of various categories of customer applications for ATM PVCs. Four ATM PVC service categories are available. The customer must specify the desired service category for each ATM PVC that is ordered. BellSouth XAATMS supports the following types of ATM PVC service categories:

- (1) Constant Bit Rate (CBR): CBR allows for applications where an ATM PVC requires special network timing requirements (i.e., strict PVC cell loss, cell delay and cell delay variation performance). For example, a CBR ATM PVC would be utilized for applications requiring circuit emulation (i.e., a continuously operating logical channel) over BellSouth XAATMS at transmission speeds comparable to DS1 and DS3. Such applications would include private line like service or voice type service where delays in transmission cannot be tolerated. The customer specifies the bandwidth required for each CBR ATM PVC when it is ordered.
- (2) Variable Bit Rate - Real Time (VBR-RT) allows for applications where an ATM PVC requires low cell delay variation. For example, VBR-RT would be utilized for applications such as variable bit rate video compression and packet voice and video which are somewhat tolerant of delay. The customer specifies the bandwidth required for each VBR-RT ATM PVC when it is ordered.

ACCESS SERVICE

21 - Fast Packet Access Services

21.3 BellSouth Exchange Access Asynchronous Transfer Mode Service (XAATMS)
(Cont'd)

21.3.1 General Description (Cont'd)

ATM Circuit Emulation Service (ATM CES) allows the interworking of ATM Service with time division multiplexing (TDM) services at a DS1 level. ATM Circuit Emulation allows the encapsulation of DS1 level TDM Service into ATM cells by using AAL1 adaptation. (Adaptation defines how higher layer information such as voice, data and video are placed in the payload of the 53-byte ATM cells.) ATM Circuit Emulation Service is provided to emulate a structured or unstructured DS1 service; when provided to emulate a structured DS1, service may be requested with or without Channel Associated Signaling (CAS).

ATM CES provides for the emulation of a TDM DS1 circuit through the ATM network so that the customer may interwork TDM with their ATM Service. The customer is responsible for the appropriate charges for such TDM services from other tariffs in addition to the charges specified herein for Exchange Access ATM Service. Additionally, with ATM CES, a permanent virtual circuit (PVC) is only available with Constant Bit Rate (CBR).

An Unstructured versus Structured Circuit Emulation Network Interface is selected based upon the customer's specific DS1 needs to respectively interwork an unstructured versus DS1 TDM service with ATM Service, subject to availability. ATM Circuit Emulation Service is available at a transmission speed of 1.536 Mbps.

An unstructured Circuit Emulation Network Interface is provided to accept the termination of a full DS1 TDM bit stream from the customer's premises through a DS1 circuit. One Unstructured Circuit Emulation Network Interface is required per such DS1 TDM service. One ATM CBR PVC Segment with 2 Mbps CBR PVC Segment Bandwidth shall apply in association with the service originating from the TDM premises to the ATM switch. Additionally, standard tariff charges apply for corresponding 2 Mbps ATM CBR PVC Segment to which this is mapped within the ATM switch; the associated XAATMS Network Interface must be a transmission speed or type which can accept the 2 Mbps CBR PVC.

A structured Circuit Emulation Network Interface accepts up to 24 DS0 terminations from a channelized DS1 bit stream(s) from the customer. The customer specifies the desired grouping of such DS0 terminations into ATM PVCs. An ATM CBR PVC Segment and Bandwidth Charges¹ apply for each PVC requested in association with the service originating from the TDM premises to the ATM switch. Additionally, the standard tariff charges apply for the corresponding ATM CBR PVC Segments to which these are mapped within the ATM switch.

Note 1: PVC Segment Bandwidth charges shall be based upon the equivalent bandwidth required for each PVC requested. The transport of TDM service is ATM CES requires additional overhead, sometimes referred to as "cell tax". Consequently, the bandwidth required for a given PVC will be greater than the sum of the DS0 TDM bandwidth. For example, the PVC resulting from a single DS0 TDM bit stream of 64 Kpbs will be greater than 64 Kbps as a result of equivalent bandwidth required for overhead and will require two increments of 64 Kbps bandwidth per CBR PVC Segment.

ACCESS SERVICE

21 - Fast Packet Access Services

21.3 BellSouth Exchange Access Asynchronous Transfer Mode Service (XAATMS) (N)
(Cont'd) (N)

21.3.1 General Description (Cont'd) (N)

For BellSouth XAATMS, the logical path between a customer's premises and a network interface on the BellSouth XAATMS switch is referred to as an ATM PVC segment. The mapping together of two ATM PVC segments through the BellSouth XAATMS switch creates an ATM PVC. This ATM PVC is a logical channel representing the path from one premises associated with a BellSouth XAATMS network interface, through the BellSouth XAATMS switch, to a premises associated with a different network interface on the BellSouth XAATMS switch. (N)

The following provides additional information on the terms used to describe the attributes of BellSouth XAATMS with respect to the PVC Feature Charges which apply for ATM PVC traffic. Information is provided regarding ATM PVC segment, ATM PVC service categories, ATM PVC traffic parameters, and ATM PVC segment bandwidth. (N)

(A) ATM PVC Segment (N)

For BellSouth XAATMS, the ATM PVC segment defines the logical path between a customer's premises and the network interface on the BellSouth XAATMS switch. An ATM PVC segment must be provisioned by the Company via service order activity and remain in place until requested to be removed by the customer. For BellSouth XAATMS, two ATM PVC segments are mapped together through the BellSouth XAATMS switch to create an ATM PVC representing a virtual channel through the BellSouth XAATMS network. (N)

(B) ATM PVC Service Categories (N)

ATM PVC service categories are established to support the service requirements of various categories of customer applications for ATM PVCs. Four ATM PVC service categories are available. The customer must specify the desired service category for each ATM PVC that is ordered. BellSouth XAATMS supports the following types of ATM PVC service categories: (N)

- (1) Constant Bit Rate (CBR): CBR allows for applications where an ATM PVC requires special network timing requirements (i.e., strict PVC cell loss, cell delay and cell delay variation performance). For example, a CBR ATM PVC would be utilized for applications requiring circuit emulation (i.e., a continuously operating logical channel) over BellSouth XAATMS at transmission speeds comparable to DS1 and DS3. Such applications would include private line like service or voice type service where delays in transmission cannot be tolerated. The customer specifies the bandwidth required for each CBR ATM PVC when it is ordered. (N)
- (2) Variable Bit Rate - Real Time (VBR-RT) allows for applications where an ATM PVC requires low cell delay variation. For example, VBR-RT would be utilized for applications such as variable bit rate video compression and packet voice and video which are somewhat tolerant of delay. The customer specifies the bandwidth required for each VBR-RT ATM PVC when it is ordered. (N)

EFFECTIVE: OCTOBER 11, 2002

ACCESS SERVICE

21 - Fast Packet Access Services

21.3 BellSouth Exchange Access Asynchronous Transfer Mode Service (XAATMS)
(Con'td)

21.3.1 General Description (Cont'd)

A customer requiring more than a DS1 but less than a DS3, can economically utilize Inverse Multiplexing for ATM Service (IMA) to achieve ATM speeds in DS1 multiples and thereby avoid subscribing to a DS3 user network interface. IMA is a physical layer technology in which a high-speed cell stream is broken down and transported across multiple DS1 links, then reconstructed back into the original stream at the ATM switch or other associated ATM equipment. IMA allows multiple DS1 links to be treated as a single, coherent ATM connection that can be managed as a linked group. IMA network interfaces are available at speeds in multiples of 1.536 Mbps (in quantities from 2 to 6) which results in ATM user network interfaces of 3.072 Mbps, 4.608 Mbps, 6.144 Mbps, 7.680 Mbps, and 9.216 Mbps. Additionally, DSL service currently cannot be provisioned on IMA.

ATM Service IMA Customer Connection Speed	Quantity of DS1 Links Required
3.072 Mbps	2
4.608 Mbps	3
6.144 Mbps	4
7.680 Mbps	5
9.216 Mbps	6

Transmission speeds of 18 Mbps, 24 Mbps, 30 Mbps and 36 Mbps are provisioned utilizing 44.210 Mbps of transport bandwidth. Therefore, oversubscription is not allowed at speeds of 18 Mbps, 24 Mbps, 30 Mbps and 36 Mbps; the sum of the equivalent bandwidth for all permanent virtual connections must be less than or equal to the bandwidth of the specified speed. Additionally, Unspecified Bit Rate permanent virtual connections are not allowed on transmission speeds of 18 Mbps, 24 Mbps, 30 Mbps and 36 Mbps.

The rate structure for BellSouth XAATMS is comprised of a Network Interface rate element by transmission speed and rate elements for PVC Features (representing ATM traffic). Connection to BellSouth XAATMS network interfaces is accomplished through dedicated access. For interstate dedicated access, rates, charges, and regulations for Special Access (a.k.a. BellSouth SPA) Services are specified in Section 7 preceding. Only non-channelized bandwidth may terminate on a BellSouth XAATMS network interface.

As BellSouth XAATMS is a connection oriented service, to transfer information a virtual connection must be set up between two network interfaces on a BellSouth XAATMS switch. BellSouth XAATMS supports ATM traffic via permanent virtual connections (PVCs). PVCs are bi-directional virtual channels that are established via the service provisioning process.

21.3 BellSouth Exchange Access Asynchronous Transfer Mode Service (XAATMS)

21.3.1 General Description

BellSouth Exchange Access Asynchronous Transfer Mode (ATM) Service (XAATMS) is a connection-oriented data service based on ATM cell-based switching technology. BellSouth XAATMS allows for the interconnection of ATM compatible customer equipment by providing efficient throughput at high speeds of transmission. BellSouth XAATMS provides the switching of symmetrical duplex transmissions of fixed-length ATM cells (herein referred to as ATM cells).

A user network interface (UNI) is available with BellSouth XAATMS. The UNI is a standard interface used to connect the customer to the BellSouth XAATMS switch. It receives the ATM cells into the ATM switch and verifies that the addressing and traffic parameters are valid (according to BellSouth XAATMS technical specifications as referenced in Section 21.3.3 following) before relaying the ATM cells to the specified destination. The UNI is offered at transmission speeds of 1.536 Mbps, 3.072 Mbps, 4.608 Mbps, 6.144 Mbps, 7.680 Mbps, 9.216 Mbps, 18 Mbps, 24 Mbps, 30 Mbps, 36 Mbps, 44.210 Mbps, 149.760 Mbps and 599.040 Mbps. Additionally, Back-Up Network Interfaces are available to provide Back-Up Capability on an optional basis. Back-Up Capability provides the ability to have a back-up logical port configured to meet a customer's needs in the event that the customer's primary connection is disabled.

Exchange Access Connectionless Data Service) (Cont'd) (T)

21.2.10 Rate and Charges

(4) Transfer of Service

When a change to the customer of record is requested, transfer of service charges, as set forth in 21.2.10(D) following will apply. Charges are applied on a Billing Account Number (BAN).

Administrative changes, as identified below, will be made without charge(s) to the customer. Such changes require the continued provision and billing of the Access Service to the same entity (i.e., customer remains responsible for all outstanding indebtedness for Access Service). Administrative changes are as follows:

- Change of customer name (i.e., the customer of record does not change but rather the customer of record changes its name -- e.g., AT&T-Long Lines to AT&T-Long Lines to AT&T-Communications)
- Change of customer or customer's end user premises address when the change of address is not a result of physical relocation of equipment,
- Change in billing data (name, address, or contact name or telephone number. The customer of record does not change),
- Change of customer circuit identification,
- Change of billing account number,
- Change of customer test line number,
- Change of customer or customer's end user contact name of telephone number, and
- Change of jurisdiction.

All other service rearrangements, including physical changes to existing services, will be charged as follows:

- If the change involves the addition of an optional feature which has a separate nonrecurring charge, that nonrecurring charge will apply.

ACCESS SERVICE

21 - Fast Packet Access Services

21.2 Exchange Access Connectionless Data Service (XACDS) (a.k.a. BellSouth Exchange Access Connectionless Data Service) (Cont'd) (T)

21.2.9 Rate Categories (Cont'd)

(b) Individual and Group Address Screening Table

Address screening allows restrictions to be reinforced on the delivery of XACDS (a.k.a. BellSouth Exchange Access Connectionless Data Service) packets from particular sources and on the transmittal of XACDS (a.k.a. BellSouth Exchange Access Connectionless Data Service) packets to particular destinations. This feature allows the customer to set up two lists of addresses per SNI. One list defines destination address screening for individually addressed packets and source address screening for all packets (whether individual or group addressed). The second list defines destination address screening for group addressed data sent by the CPE. (T)

The combined total of addresses in both tables may not exceed 128.

(c) Group Address List

This feature allows the customer to pre-assign a list of individual SNI addresses as a Group Address. With this feature invoked, data that is sent to the Group Address will be reproduced by the XACDS (a.k.a. BellSouth Exchange Access Connectionless Data Service) network and sent to every SNI that has an address on the list. A maximum of 128 SNI addresses may be contained in one Group Address List. (T)

(3) Feature Change Charge

In addition to any specific Optional Feature charges, a Feature Change Charge will be applied whenever a change is made (at the customer's request) to a single optional feature within a single network configuration on a single switch. Although multiple changes may be caused by such actions, only one Feature Change Charge will apply.

ACCESS SERVICE

21 - Fast Packet Access Services

21.2 Exchange Access Connectionless Data Service (XACDS) (a.k.a. BellSouth Exchange Access Connectionless Data Service) (Cont'd)

21.2.9 Rate Categories

The following rate categories apply to XACDS (a.k.a. BellSouth Exchange Access Connectionless Data Service). Monthly recurring rates apply each month or fraction thereof that a specific rate element is provided. For billing purposes, each month is considered to have 30 days. The types of nonrecurring charges that apply for XACDS (a.k.a. BellSouth Exchange Access Connectionless Data Service) are: installation of service, installation of optional features, and service rearrangements. These rates and charges are described as follows:

(1) Network Interface

This rate category provides for the customer's termination on the Fast Packet switch. The Network Interface rate category includes the packet switching function.

(2) Optional Features

The Optional Features rate category provides for optional features which may be added to an XACDS (a.k.a. BellSouth Exchange Access Connectionless Data Service) to improve its quality or utility to meet specific communications requirements.

(a) Multiple Addresses

This feature allows the customer to have multiple addresses associated with one SNI. A maximum of 16 addresses is allowed per XACDS (a.k.a. BellSouth Exchange Access Connectionless Data Service) SNI ordered, except for 44.210 Mbps SNIs where a maximum of 128 addresses is allowed. The first address is provided at no additional charge. An additional charge applies for every address per SNI excluding the first address. (T)

21.2 Exchange Access Connectionless Data Service (XACDS) (a.k.a. BellSouth Exchange Access Connectionless Data Service) (Cont'd) (T)
(T)

21.2.3 Technical Specifications

XACDS (a.k.a. BellSouth Exchange Access Connectionless Data Service) access (T)
utilizes Inter-Carrier Interface Protocol (ICIP) Level 3 as defined in
Bellcore TR-TSV-001060, and DXI Data Link (Level 2) protocol as defined in
Bellcore TR-TSY-001239. Detailed BellSouth conformance to the requirements in
these documents is contained in Cascade documents 80011 and 80012,
respectively. DS3 physical level specifications conform to the Asynchronous
c-bit Parity structure defined in ANI T1.107a-1990.

21.2.4 Interface Specifications

The following specification is available with this service:

Digital packet (SNI)

21.2.5 Acceptance Testing

At no additional charge, and at the customer's request, the Telephone Company
will cooperatively test at the time of installation.

21.2.6 Ordering Options and Conditions

The Access Order, as set forth in Section 5 preceding, is used in the
provisioning of Exchange Access Connectionless Data Service (XACDS) (a.k.a. (T)
BellSouth Exchange Access Connectionless Data Service). Also included in (T)
that section are other charges which may be associated with ordering XACDS
(a.k.a. BellSouth Exchange Access Connectionless Data Service) (e.g., Service (T)
Date Change Charges, Cancellation Charges, etc.).

21.2.7 Minimum Period of Service

The minimum period is one month.

21.2.8 Rate Regulations

Rates and Charges are specified in 21.2.10 following for Exchange Access
Connectionless Data Services (XACDS) (a.k.a. BellSouth Exchange Access (T)
Connectionless Data Service). XACDS (a.k.a. BellSouth Exchange Access (T)
Connectionless Data Service) is available under the Fast Packet Services (T)
Payment Plan (FPSPP) as specified in 2.4.8(C) preceding.

EFFECTIVE: MARCH 3, 2001

21.2.2 Service Description (Cont'd)

(5) Maintenance

In order to maintain the quality of XACDS (a.k.a. BellSouth Exchange Access Connectionless Data Service), the Telephone Company reserves the right to perform preventive maintenance and software updates to the network. This could result in XACDS (a.k.a. BellSouth Exchange Access Connectionless Data Service) being unavailable during the time period between 2:00 A.M. and 4:00 A.M. Eastern Time on the specific days as set forth by state in the following chart. The Telephone Company only expects to utilize this maintenance window for any given switch on the average of once a quarter. However, the Telephone Company reserves the right to perform maintenance at any time at its discretion that it believes such maintenance is necessary. The Telephone Company will make a reasonable effort to provide notice to those customers likely to be affected by such maintenance work.

<u>State</u>	<u>Scheduled Maintenance Days</u>
Alabama	Sunday and Monday
Florida	Sunday and Wednesday
Georgia	Sunday and Friday
Kentucky	Sunday and Monday
Louisiana	Sunday and Tuesday
Mississippi	Sunday and Tuesday
North Carolina	Sunday and Saturday
South Carolina	Sunday and Saturday
Tennessee	Sunday and Thursday

(T)

21.2.2 Service Description (Cont'd)

(2) Installation of Optional Features

Nonrecurring charges apply to the installation of optional features as set forth in Section 21.2.10(B) following.

(3) Service Rearrangements

Service rearrangements are changes to existing (installed) services which do not result in a change in the minimum period requirements as set forth in 5.6(E) preceding. Changes which result in the establishment of new minimum period obligations are treated as disconnects and starts. A change which results from a transfer of service is described and charged as set forth in (4) and 21.2.10(D) following.

(4) Transfer of Service

When a change in billing data (e.g., name, address, contact name, or telephone number) is requested in association with a change in the customer's record, transfer of service charges, as set forth in 21.2.10(D) following will apply. Charges are applied on a Billing Account Number (BAN).

(5) Maintenance

In order to maintain the quality of XACDS (a.k.a. BellSouth Exchange Access Connectionless Data Service), the Company reserves the right to perform preventive maintenance and software updates to the network. This could result in XACDS (a.k.a. BellSouth Exchange Access Connectionless Data Service) being unavailable during the time period between 2:00 A.M. and 4:00 A.M. Eastern time on any given Wednesday or Sunday morning. However, the Company only expects to utilize this maintenance window for any given switch on the average of once a quarter. In addition, the Company will make every reasonable effort to provide advance notice to those customers likely to be affected by such maintenance work. This maintenance window may be adjusted by the Company upon written notice to the customer. (T)

ACCESS SERVICE

21 - Fast Packet Access Services

21.2 Exchange Access Connectionless Data Service (XACDS) (a.k.a. BellSouth Exchange Access Connectionless Data Service)

21.2.1 General Description

Exchange Access Connectionless Data Service (XACDS) (a.k.a. BellSouth Exchange Access Connectionless Data Service) is a connectionless, packet-switched data service allowing for the interconnection of local area networks (LANs) or other compatible customer equipment. This service provides efficient throughput via 56 Kbps, 64 Kbps, 1.536 Mbps and 44.210 Mbps channels. (T)

The XACDS (a.k.a. BellSouth Exchange Access Connectionless Data Service) switch subdivides the customer's data traffic into packets, with each packet having address information. Each packet is switched independently without prior establishment of a network connection. A unique address is assigned to each subscriber interface on the switch (referred to as a subscriber network interface or SNI). This unique address allows the XACDS (a.k.a. BellSouth Exchange Access Connectionless Data Service) switch to route the customer's data traffic.

XACDS (a.k.a. BellSouth Exchange Access Connectionless Data Service) is comprised of a network interface component and optional features. Connection to XACDS (a.k.a. BellSouth Exchange Access Connectionless Data Service) network interfaces may be accomplished through dedicated access. For interstate dedicated access, rates, charges, and regulations for Special Access (a.k.a. BellSouth SPA) Service are specified in Section 7 preceding. Only non-channelized bandwidth may terminate on an XACDS (a.k.a. BellSouth Exchange Access Connectionless Data Service) network interface.

The Subscriber Network Interface (SNI) is a standard interface used to connect the customer to the XACDS (a.k.a. BellSouth Exchange Access Connectionless Data Service) network. The XACDS (a.k.a. BellSouth Exchange Access Connectionless Data Service) switch receives the data packet from the customer's network or device and verifies that the source address is one legitimately assigned to the receiving SNI.

At the SNI, the XACDS (a.k.a. BellSouth Exchange Access Connectionless Data Service) switch can screen both source and destination addresses. This feature defines the addresses that can send information to the SNI and that can receive information from the SNI.

21.2.2 Service Description

(1) Installation of Service

Nonrecurring charges apply to each SNI on each XACDS (a.k.a. BellSouth Exchange Access Connectionless Data Service) installed. Nonrecurring Charges for the Network Interface elements are set forth in 21.2.10(A) following.

ACCESS SERVICE

21 - Fast Packet Access Services

21.1 Exchange Access Frame Relay Service (XAFRS) (a.k.a. BellSouth Exchange Access Frame Relay Service) (Cont'd)

21.1.9 Rate Categories (Cont'd)

(B) Optional Features (Cont'd)

(6) Customer Configuration Management Capability (Cont'd)

- (l) After the customer has established Customer Configuration Management Capability (by ordering Configurable DLCI Bundles to establish the configurable DLCI block for each XAFRS Network Interface) for their network, the customer will have access thru the NVS system to mechanically add, change and delete configurable PVCs between these XAFRS Network Interfaces.
- (m) A Customer Configuration Management service request is made thru NVS for a specific PVC activity (e.g., add configurable PVC, change CIR or endpoint on an existing configurable PVC, delete configurable PVC, etc.) involving Frame Relay services equipped with NVS and Customer Configuration Management Capability. Each Customer Configuration Management service request will be assigned a service request number to facilitate customer questions and to enable status and tracking.
- (n) A Customer Configuration Management service request will be provisioned within minutes; however a Cancellation Window of two hours is allowed after successful provisioning during which time the customer may submit a request thru NVS to cancel or "undo" the request before the change becomes permanent. The customer may specifically request to forgo (close) the Cancellation Window during which a particular service request may be cancelled and commit that NVS make the service request provisioning become permanent immediately. When the Cancellation Window expires without the customer canceling the service request or the customer foregoes/closes the Cancellation Window, the provisioned service request is made permanent and considered a completed transaction.
- (o) Customer Configuration Management Capability effectively provides the customer near real-time processing capability to allow them to manage the provisioning and change activities for configurable PVCs within their network. However, access to Customer Configuration Management Capability is not guaranteed for customer access and use twenty-four hours a day/seven days a week. Customer access may be periodically preempted for higher priority Company network management and maintenance activities. Customer inability to access the NVS/Customer Configuration Management systems during these periods will not be considered a service outage.

EFFECTIVE: DECEMBER 16, 2004

(N)

(B) Optional Features (Cont'd)

(N)

(6) Customer Configuration Management Capability (Cont'd)

(N)

- (i) Customer Configuration Management Capability may only be utilized to create configurable PVCs between two Frame Relay services equipped with NVS and Customer Configuration Management Capability within the same LATA.

(N)

(N)

(N)

(N)

- (j) A customer may request that some or all of the standard DLCIs associated with an existing XAFRS Network Interface with Customer Configuration Management Capability be converted to Configurable DLCIs. Only standard DLCIs that are mapped to other Network Interfaces also equipped for Customer Configuration Management can be converted (subject to any limitations set forth herein 21.1.9.(B)(6) on what types of Network Interfaces and PVCs are technically compatible with Customer Configuration Management Capability). The DLCI Conversion Charge is the nonrecurring charge applicable per standard DLCI requested to be converted to a configurable DLCI. Once converted to a configurable DLCI, that DLCI will be counted against the XAFRS Network Interface configurable DLCI block quantity; monthly rates for the standard DLCI and associated CIR will concurrently no longer apply.

ACCESS SERVICE

21 - Fast Packet Access Services

21.1 Exchange Access Frame Relay Service (XAFRS) (a.k.a. BellSouth Exchange Access Frame Relay Service) (Cont'd)

21.1.9 Rate Categories (Cont'd)

(B) Optional Features (Cont'd)

(6) Customer Configuration Management Capability (Cont'd)

- (e) A monthly rate applies for each Configurable DLCI Bundle ordered and the rate varies based upon the quantity of configurable DLCIs included in each bundle. Each Configurable DLCI Bundle provides a specific quantity of standard configurable DLCIs, each with a maximum CIR of up to 64 Kbps per configurable DLCI. Customers will order the quantity and size bundles that will provide the total quantity or block of configurable DLCIs needed for an XAFRS Network Interface. The configurable DLCI block quantity is then the customer-established limit of the number of configurable DLCIs which the customer may manage on a specific XAFRS Network Interface. The block of configurable DLCIs selected for an XAFRS Network Interface may be increased or decreased as the customer's needs change. The Configurable DLCI Block Establishment/Change Charge is the nonrecurring charge applicable for initially ordering and provisioning the Configurable DLCI Bundle(s) to establish the configurable DLCI block and for making a subsequent request to change the block size (i.e., add or delete bundles).
- (f) The Configurable DLCI Block Establishment/Change Charge is a nonrecurring charge applicable to initially establish the block of configurable DLCIs for an XAFRS Network Interface. This charge is also applicable per subsequent request to change the size of the configurable DLCI block. Only one such nonrecurring charge applies per request regardless of how many Configurable DLCI Bundles are requested to initially establish the block or are requested subsequently to be added or deleted.
- (g) With Customer Configuration Management Capability the customer will have the capability to add, change and/or delete configurable PVCs formed by the mapping of two configurable DLCIs. A PVC cannot be established between a configurable DLCI and a non-configurable DLCI thru either Customer Configuration Management Capability or thru the standard ordering/provisioning process. Customer Configuration Management Capability cannot be utilized to make changes to a non-configurable PVC, and the standard ordering/provisioning process cannot be utilized to create, modify or delete a configurable PVC.
- (h) As a current technical limitation Customer Configuration Management Capability cannot be utilized for Priority PVCs, Intelligent PVCs, MultiCast PVCs or Frame Relay to ATM Interworking PVCs. Therefore, requests for these types of PVCs will have to be made thru the standard ordering/provisioning process for the Company to provision and will be subject to the preceding standard rates and charges for such features.

EFFECTIVE: DECEMBER 16, 2004

ACCESS SERVICE

21 - Fast Packet Access Services

21.1 Exchange Access Frame Relay Service (XAFRS) (a.k.a. BellSouth Exchange Access Frame Relay Service) (Cont'd)

21.1.9 Rate Categories (Cont'd)

(B) Optional Features (Cont'd)

(6) Customer Configuration Management Capability

Customer Configuration Management Capability is optionally available for an XAFRS customer to have the ability to add, change and delete PVCs for their XAFRS Network Interface themselves, without utilizing the standard ordering/provisioning process to request the Company to perform these functions. PVCs created thru the standard ordering/provisioning process by the Company are standard non-configurable PVCs and cannot be modified by the customer as described herein thru Customer Configuration Management Capability; the customer is billed the preceding DLCI and CIR rates and charges for standard non-configurable PVCs. PVCs created thru Customer Configuration Management Capability are referred to as configurable PVCs and may be created and modified by the customer as described herein; the customer is billed the charges described following for such configurable PVCs. A customer may choose to utilize one or both of these methods for establishing PVCs on a given XAFRS Network Interface. Due to technical limitations, Customer Configuration Management Capability is not available on an XAFRS MultiLink Network Interface or on an XAFRS Network Interface which is a "primary" network interface in association with Back-Up Capability.

(a) Customer Configuration Management Capability is available only for XAFRS Network Interfaces equipped with Network Visibility Service (NVS) and is available only for the customer to add, modify or delete configurable PVCs formed between similarly equipped Frame Relay service with NVS and Customer Configuration Management Capability.

(b) Customer Configuration Management Capability is established via the standard ordering/provisioning process on a per XAFRS Network Interface basis when a minimum of one Configurable DLCI Bundle is ordered.

(c) DLCIs in a Configurable DLCI Bundle will be referred to as configurable DLCIs. Two configurable DLCIs mapped thru Customer Configuration Management Capability form a configurable PVC.

(d) To utilize Customer Configuration Management Capability, each XAFRS Network Interface must have a minimum of one Configurable DLCI Bundle ordered by the customer. More than one Configurable DLCI Bundle may be ordered for a specific XAFRS Network Interface to establish the block, or total quantity, of configurable DLCIs available for that XAFRS Network Interface. The block of configurable DLCIs established are only for the use of that single XAFRS Network Interface may not be "shared" with other XAFRS Network Interfaces.

EFFECTIVE: OCTOBER 5, 2001

ACCESS SERVICE

21 - Fast Packet Access Services

21.1 Exchange Access Frame Relay Service (XAFRS) (a.k.a. BellSouth Exchange Access Frame Relay Service) (Cont'd)

21.1.9 Rate Categories (Cont'd)

(B) Optional Features (Cont'd)

(2) Committed Information Rate (CIR)

Committed Information Rate is a feature that enables the customer to select a sustained throughput under normal conditions. A CIR must be selected for each DLCI.

A standard CIR rate element is applicable per DLCI when it is to be mapped to another DLCI to form a single PVC. (N)

A Frame Relay to ATM Network Interworking CIR rate element is applicable per DLCI when it is to be mapped to an ATM Service PVC Segment to form a single Frame Relay to ATM Network Interworking PVC. The mapping of a DLCI to an ATM PVC Segment is permitted on a per PVC basis. The Frame Relay data is essentially encapsulated in an ATM Service bit stream and retrieved by the ATM customer's CPE as Frame Relay. Associated rates and charges for the related ATM Service apply as usual from the appropriate ATM Service tariff. Only Frame Relay DLCIs and ATM PVC Segments of a comparable quality of service can be mapped together to form a single PVC; the specific combinations of Frame Relay DLCIs and ATM PVC Segments permitted to be mapped together are as follows: (N)

<u>Frame Relay DLCI:</u>	<u>ATM PVC Segment¹:</u>	(N)
--------------------------	-------------------------------------	-----

-Non-priority with 0 CIR	and UBR	(N)
-Non-priority with >0 CIR	and VBR-NRT	(N)
-Priority with >0 CIR	and VBR-RT	(N)

The rate elements for standard CIR with a value greater than zero and all Frame Relay to ATM Network Interworking CIR have a separate charge. Frames submitted at a rate above the subscribed CIR will be marked "discard eligible" (DE) and, should network congestion occur, are subject to being dropped by the network. If CIR is set equal to zero, then all frames will be marked DE. However, in the absence of network congestion, DE marked frames will be transported with the same reliability as frames not marked DE. The CIR value selected cannot exceed the minimum transmission speed of the link of either end of the PVC. (C)

The CIR value of Priority DLCIs must be greater than zero.

Note 1: Due to technical limitations a mapping combination involving an ATM CBR PVC Segment is not possible. (N)

ACCESS SERVICE

21 - Fast Packet Access Services

21.1 Exchange Access Frame Relay Service (XAFRS) (a.k.a. BellSouth Exchange Access Frame Relay Service) (Cont'd)

21.1.9 Rate Categories (Cont'd)

(B) Optional Features

The Optional Features rate category provides for optional features that may be added to XAFRS (a.k.a. BellSouth Exchange Access Frame Relay Service) to improve its quality or utility to meet specific communications requirements.

(1) DLCIs per UNI or NNI

This feature provides for the assignment of Data Link Channel Identifiers (DLCIs) per UNI or NNI. One DLCI is required per UNI or NNI. When any two DLCIs are mapped together, a PVC can be created. On an optional basis, a single PVC may also be created via the mapping of a DLCI and an ATM Service PVC Segment.

One Initial DLCI is applicable when DLCIs are ordered at the same time as the installation of a UNI or NNI. Only one "Initial" DLCI (either one Initial Standard DLCI or one Initial Priority DLCI) is allowed per UNI or NNI. Additional DLCIs (beyond this initial DLCI) ordered with the installation of the UNI or NNI and any DLCIs ordered subsequent to the installation of the UNI or NNI are considered Additional DLCIs. A DLCI which is not a Priority DLCI, as discussed following, is referred to as a Standard DLCI.

Priority PVC capability allows a customer to differentiate specific PVCs with regard to the importance of the data within those PVCs as compared to other PVCs. In the case of contention or network congestion, the network will give precedence to the frames of a Priority PVC over frames of a Standard PVC. XAFRS (a.k.a., BellSouth Exchange Access Frame Relay service) allows the creation of Priority PVCs. Such a Priority PVC is formed by the mapping of two Priority DLCIs (as set forth in 21.1.10(B)); these Priority DLCIs must have an associated CIR value of greater than zero. A request to convert an existing Standard PVC to a Priority PVC (or vice versa) shall be considered as a request to disconnect the existing DLCIs and as a request to connect the new DLCIs.

Individual DLCI charges are not applicable to the standard configurable DLCIs provided within a Configurable DLCI Bundle associated with optional Customer Configuration Management Capability described in 21.1.9.(B)(6) following. Configurable DLCIs are considered as additional standard DLCIs.

21.1 Exchange Access Frame Relay Service (XAFRS) (a.k.a. BellSouth Exchange Access Frame Relay Service (Cont'd)

21.1.8 Rate Regulations (Cont'd)

For a promotional period from January 11, 2002 to April 10, 2002, customers may receive a credit for BellSouth Exchange Access ATM Service(XAATMS), BellSouth Exchange Access Frame Relay Service(XAFRS), BellSouth Managed Shared ATM Service(MSATMS) and BellSouth Managed Shared Frame Relay Service(MSFRS) Nonrecurring Charges for new ATM user-to-network interfaces(UNIs) and/or new Frame Relay network-to-network interface(NNIs) of DS1 or higher speed, provided the following criteria are met:

1. New ATM UNIs and/or Frame Relay NNIs are XAATMS, XAFRS, MSFRS, and/or MSATMS connections;
2. These new ATM UNIs and/or new Frame Relay NNIs must be ordered in at least 10 LATAS;
3. Five or more of these new ATM UNIs and/or new Frame Relay NNIs must be speeds of DS3 or higher
4. XAATMS and XAFRS connections must be ordered under the Fast Packet Services Payment Plan, Plan B(25-48 months) or a Fast Packet Savings Plan;
5. MSFRS and MSATMS connections must be ordered under a Fast Packet Savings Plan;
6. Installation must be completed by May 10, 2002.

Customers must pay Nonrecurring Charges at due date to avoid late payment fees. Credits equal to Nonrecurring Charges that are billed for installation will be applied at the end of the promotional period. No interest will be paid on these credits from payment date to credit date.

Unless specified otherwise, Exchange Access Frame Relay Service (XAFRS) (a.k.a. BellSouth Exchange Access Frame Relay Service) is available for use with the Fast Packet Savings Plan subject to the regulations provided in 2.4.8(F) preceding.

Digital packet (NNI)

21.1.5 Acceptance Testing

At no additional charge, and at the customer's request, the Telephone Company will cooperatively test at the time of installation.

21.1.6 Ordering Options and Conditions

The Access Order, as set forth in Section 5 preceding, is used in the provisioning of Exchange Access Frame Relay Service (XAFRS) (a.k.a. BellSouth Exchange Access Frame Relay Service). Also included in that section are other charges which may be associated with ordering XAFRS (a.k.a. BellSouth Exchange Access Frame Relay Service) (e.g., Service Date Change Charges, Cancellation Charges, etc.).

21.2.7 Minimum Period of Service

The minimum period is one month.

21.1.8 Rate Regulations

Rates and charges are specified in 21.1.10 following for Exchange Access Frame Relay Service (XAFRS) (a.k.a. BellSouth Exchange Access Frame Relay Service). XAFRS (a.k.a. BellSouth Exchange Access Frame Relay Service) is available under the Fast Packet Services Payment Plan (SPP) as specified in 2.4.8(C) preceding. The nonrecurring charges for NNI's set forth in 21.1.10(A) following shall not apply for the installation of NNI's under Fast Packet SPP fixed service periods of 25 months or greater that are ordered between February 17, 1998 and May 15, 1998 and are installed by June 15, 1998. Customers that order XAFRS (a.k.a., BellSouth Exchange Access Frame Relay Service) under a Fast Packet Services Payment Plan from December 23, 1999, through May 26, 2000 may terminate such service agreements by May 26, 2000 and convert to month-to-month service. In such cases the termination liability shall be equal to the difference in the rates paid for the period of time the Fast Packet Service Payment Plan agreement is in effect and the month-to-month rates for the same service period, as long as the termination occurs by May 26, 2000. (C)

21.1.9 Rate Categories

The following rate categories apply to XAFRS (a.k.a. BellSouth Exchange Access Frame Relay Service):

(A) Network Interface

This rate category provides for the customer's termination on the Fast Packet switch. The Network Interface rate category includes the packet switching function.

21.1.2 Service Description (Cont'd)

(N)

(6) Service Level Agreements (Cont'd)

(N)

(e) Service Level Commitments (Cont'd)

(N)

(1) Network Availability Commitment: 99.9% (Cont'd)

(N)

- Total Frame Relay Network - Network Availability: Network Availability for the customer's total network is calculated by subtracting the total unavailable time for all the Frame Relay UNI/NNIs in a specific total calendar month, from the total available time for all the Frame Relay UNI/NNIs in that specific total calendar month, and then dividing the difference by the total available time for all the Frame Relay UNI/NNIs in that specific total calendar month. If the resulting percentage is less than 99.9%, the commitment for Network Availability has been missed; the SLA Network Availability credit will then be issued on any Frame Relay UNI/NNI whose specific individual Network Availability measurement is below 99.9%.

(N)

(N)

(N)

(N)

(N)

(N)

(N)

(N)

(N)

(N)

(N)

(N)

- Individual Frame Relay UNI/NNI - Network Availability: Network Availability for an individual Frame Relay UNI/NNI is calculated by first subtracting the unavailable time from the total available time for a specific calendar month, and then dividing it by the total available time for that specific calendar month. If the Network Availability SLA commitment was missed on the customer's total network and the resulting percentage for a specific individual Frame Relay UNI/NNI is less than 99.9%, the SLA Network Availability credit set forth in 21.1.2(6)(f)(1) will then be issued on that specific individual Frame Relay UNI/NNI.

(N)

(N)

(N)

(N)

(N)

(N)

(N)

(N)

(N)

(2) Network Transit Delay Commitment: 60 milliseconds, one-way

(N)

- The Network Transit Delay commitment is provided for each individual PVC within the customer's Frame Relay network.
- Through the NVS System, Network Transit Delay will measure the average one-way transit time of a specific PVC's frames through the network within a specific calendar month. The transit time for each frame transmitted is measured from the originating Frame Relay UNI/NNI to the terminating Frame Relay UNI/NNI. The measurement for the Network Transit Delay commitment is the average transit time of a frame for a PVC, based upon all the frames transmitted for that PVC during that specific calendar month.

ACCESS SERVICE

21 - Fast Packet Access Services

21.1 Exchange Access Frame Relay Service (XAFRS) (a.k.a. BellSouth Exchange Access Frame Relay Service) (Cont'd)

21.1.2 Service Description (Cont'd)

(6) Service Level Agreements (Cont'd)

(c) (Cont'd)

- the customer's premises equipment,
- unavailability of the customer's facilities and/or equipment, and
- customer oversubscription of the UNI/NNI beyond 200% (i.e., the sum of the total CIR of all PVCs carried by any UNI or NNI may not be greater than 200% of the UNI/NNI Network Interface speed).

- (d) SLA credits for missed commitments do not apply for situations when the customer's service is out of operation as a result of 1) (C)
scheduled maintenance windows as set forth in 21.1.2(5) preceding (C)
and 2) customer requests for PVC rearrangements which resulted in (C)
that service being unavailable as set forth in 21.1.2(3)(a) (C)
preceding. Time from such activity does not count towards the time (C)
a service is considered as unavailable during a calendar month for
purposes of measuring for the Network Availability SLA.

(e) Service Level Commitments

SLA commitments for the specific aspects of the Frame Relay network's performance set forth in (a) preceding are measured on a specific calendar month basis. The specific network performance commitments provided and how their performance is measured through the NVS system for a calendar month are as follows:

(1) Network Availability Commitment: 99.9%

- The Network Availability commitment is provided on the customer's total Frame Relay network. Network Availability will measure the percentage of time during a calendar month that the customer's Frame Relay network is available.
- Network availability will be measured through the NVS system for the customer's total Frame Relay network and for each individual Frame Relay UNI/NNI for a whole calendar month.
- For the purpose of measuring Network Availability, times during which a Frame Relay UNI/NNI is out of operation in association with maintenance windows (as set forth in 21.1.2(5)) and in association with situations over which the Company does not have control (as set forth in 21.1.2(6)(c)) are counted as "available" time.

EFFECTIVE: DECEMBER 31, 2004

ACCESS SERVICE

(N)

21 - Fast Packet Access Services

(N)

21.1 Exchange Access Frame Relay Service (XAFRS) (a.k.a. BellSouth Exchange Access Frame Relay Service) (Cont'd)

(N)

(N)

21.1.2 Service Description (Cont'd)

(N)

(6) Service Level Agreements

(N)

Service Level Agreements (SLAs) provide the Company's service level commitments for specific aspects of its Frame Relay network's performance. SLAs are only provided for customers with at least ten Frame Relay UNIs and or NNIs. Such customers must also subscribe to Network Visibility Service (specifically NVS Fault Management, On Demand Statistics and Performance Reports) which is the primary monitoring and reporting tool used for determining performance results and missed commitments.

(N)

(N)

(N)

(N)

(N)

(N)

(N)

SLA commitments only apply for service wholly within Company territory; SLA commitments will not apply for service which is part of a jointly provided service.

(N)

(N)

(N)

(a) SLA commitments are provided for Network Availability, Network Transit Delay and Frame Delivery Rate.

(N)

(N)

(b) SLA credits are provided for missed commitments, except as specified otherwise in (c) and (d) following. An SLA report is provided through the NVS system that provides details of missed commitments upon which credits will be issued; the SLA report is available on a calendar month basis. Credits are automatically issued based upon the end-of-month SLA report; such credits shall only be issued once a month. The Company's calculation of its performance through the NVS system shall be the sole determinate of the Company's obligation to provide a credit for a missed performance commitment as set forth in this tariff.

(N)

(N)

(N)

(N)

(N)

(N)

(N)

(N)

(N)

(c) SLA credits for missed commitments do not apply when any commitment is not met because the Company does not have control over the circumstances causing the commitment to be missed. Situations over which the Company does not have control can be defined as, but not limited to the following:

(N)

(N)

(N)

(N)

(N)

- any act, any omission or negligence on the part of the customer, any other customer or any third party, or of any other entity providing a portion of the service,

(N)

(N)

(N)

- labor difficulties, governmental orders, civil commotions, acts of civil or military authority, embargoes, epidemics, declared National Emergencies, criminal actions against the Company, war, terrorist acts, riots, insurrections, fires, explosions, nuclear accidents, power blackouts, acts of God (including, but not limited to, earthquakes, floods or unusually severe weather conditions) or other circumstances beyond the Company's control,

ACCESS SERVICE

21 - Fast Packet Access Services

21.1 Exchange Access Frame Relay Service (XAFRS) (a.k.a. BellSouth Exchange Access Frame Relay Service) (Cont'd)

21.1.2 Service Description

(1) Installation of Service

Nonrecurring charges apply to each UNI or NNI on each XAFRS (a.k.a. BellSouth Exchange Access Frame Relay Service) installed, except as set forth in 21.1.8 following.

Nonrecurring charges for the Network Interface elements are set forth in 21.1.10(A) following.

(2) Installation of Optional Features

Nonrecurring charges apply to the installation of optional features as set forth in 21.1.10(B) following.

(3) Service Rearrangements

Service rearrangements are changes to existing (installed) services which do not result in a change in the minimum period requirements as set forth in 5.6(E) preceding. Changes which result in the establishment of new minimum period obligations are treated as disconnects and starts. A change which results from a transfer of service is described and charged as set forth in (4) and 21.1.10(D) following.

- (a) Requests for PVC rearrangements may result in the service being unavailable during the time that such rearrangements are performed/provisioned by the Telephone Company. (N)
(N)
(N)

Customer requests for PVC rearrangements that are submitted with a due date, specified worktime (in Eastern Time), contact name and contact phone number will be performed on the due date at the time requested by the customer. (N)
(N)
(N)
(N)

Customer requests for PVC rearrangements that are submitted with a due date but without the specified worktime (in Eastern Time), contact name and contact phone number will be performed on the due date plus one day, between Midnight and 4:00 A.M. Eastern Time. (N)
(N)
(N)
(N)

(4) Transfer of Service

When a change in billing data (e.g., name, address, contract name, or telephone number) is requested in association with a change in the customer's record, transfer of service charges, as set forth in 21.1.10(D) following will apply. Charges are applied on a Billing Account Number (BAN).

(5) Maintenance

In order to maintain the quality of XAFRS (a.k.a. BellSouth Exchange Access Frame Relay Service), the Company reserves the right to perform preventive maintenance and software updates to the network. This could result in XAFRS (a.k.a. BellSouth Exchange Access Frame Relay Service) being unavailable during the time period between 2:00 A.M. and 4:00 A.M. Eastern Time on any given Wednesday or Sunday morning. However, the Company only expects to utilize this maintenance window for any given switch on the average of once a quarter. In addition, the Company will make every reasonable effort to provide advance notice to those customers likely to be affected by such maintenance work. This maintenance window may be adjusted by the Company upon written notice to the customer.

ACCESS SERVICE

21 - Fast Packet Access Services

21.1 Exchange Access Frame Relay Service (XAFRS) (a.k.a. BellSouth Exchange Access Frame Relay Service) (Cont'd)

21.1.1 General Description (Cont'd)

There are two network interfaces available - a user network interface (UNI) and a network-to-network interface (NNI).

The user network interface (UNI) is a standard interface used to connect the customer to the XAFRS (a.k.a. BellSouth Exchange Access Frame Relay Service) network. It receives the data frame from the customer's network or device and verifies that the DLCI is valid before relaying the frame to the destination. The UNI is offered at transmission speeds of 56 Kbps, 64 Kbps, 112 Kbps, 128 Kbps, 192 Kbps, 256 Kbps, 320 Kbps, 384 Kbps, 448 Kbps, 512 Kbps, 576 Kbps, 640 Kbps, 704 Kbps, 768 Kbps, 1024 Kbps, 1152 Kbps, 1.536 Mbps, and 44.210 Mbps. (C)
(C)
(C)

The network-to-network interface (NNI) specifies how an XAFRS (a.k.a. BellSouth Exchange Access Frame Relay Service) switch sends and receives data from another provider's Frame Relay switch. The NNI is offered at transmission speeds of 56 Kbps, 64 Kbps, 112 Kbps, 128 Kbps, 192 Kbps, 256 Kbps, 320 Kbps, 384 Kbps, 448 Kbps, 512 Kbps, 576 Kbps, 640 Kbps, 704 Kbps, 768 Kbps, 1024 Kbps, 1152 Kbps, 1.536 Mbps and 44.210 Mbps. ACCESS SERVICE

21 - Fast Packet Access Services

21.1 Exchange Access Frame Relay Service (XAFRS) (a.k.a. BellSouth Exchange Access Frame Relay Service) (Cont'd)

21.1.1 General Description (Cont'd)

There are two network interfaces available - a user network interface (UNI) and a network-to-network interface (NNI).

The user network interface (UNI) is a standard interface used to connect the customer to the XAFRS (a.k.a. BellSouth Exchange Access Frame Relay Service) network. It receives the data frame from the customer's network or device and verifies that the DLCI is valid before relaying the frame to the destination. The UNI is offered at transmission speeds of 56 Kbps, 64 Kbps, 112 Kbps, 128 Kbps, 192 Kbps, 256 Kbps, 320 Kbps, 384 Kbps, 448 Kbps, 512 Kbps, 576 Kbps, 640 Kbps, 704 Kbps, 768 Kbps, 1024 Kbps, 1152 Kbps, 1.536 Mbps, 3 Mbps, 6 Mbps, 9 Mbps, 12 Mbps, 15 Mbps, 18 Mbps, 21 Mbps, 24 Mbps, 27 Mbps, 30 Mbps, 33 Mbps and 44.210 Mbps.

The network-to-network interface (NNI) specifies how an XAFRS (a.k.a. BellSouth Exchange Access Frame Relay Service) switch sends and receives data from another provider's Frame Relay switch. The NNI is offered at transmission speeds of 56 Kbps, 64 Kbps, 112 Kbps, 128 Kbps, 192 Kbps, 256 Kbps, 320 Kbps, 384 Kbps, 448 Kbps, 512 Kbps, 576 Kbps, 640 Kbps, 704 Kbps, 768 Kbps, 1024 Kbps, 1152 Kbps, 1.536 Mbps, 3 Mbps, 6 Mbps, 9 Mbps, 12 Mbps, 15 Mbps, 18 Mbps, 21 Mbps, 24 Mbps, 27 Mbps, 30 Mbps, 33 Mbps and 44.210 Mbps.

Additionally, Back-Up UNI and Back-Up NNI network interfaces are available to be utilized to provide Back-Up capability on an optional basis. Manual Back-Up Capability and Automatic Back-Up Capability provide the ability to have a back-up logical port configured to meet a customer's needs in the event that the customer's primary connection is disabled. Manual Back-Up is available at transmission speeds of 56 Kbps, 64 Kbps, 1.536 Mbps and 44.210 Mbps. Automatic Back-Up is available at transmission speeds of 56 Kbps, 64 Kbps, 1.536 Mbps and 44.210 Mbps. Connection to a Back-Up Network Interface is accomplished through dedicated access; for interstate dedicated access, rates, charges and regulations for Special Access(a.k.a. BellSouth SPA) Services are specified in Section 7 preceding. Both the Back-Up Network Interface and its associated transport are specifically dedicated to providing back-up service and remain idle except when being utilized for back-up purposes.

The customer must prearrange with the Company which Network Interface(s) may have their traffic redirected to a specific Back-Up Network Interface so that the necessary work is done by the Company which is required prior to back-up capability being possible. A Network Interface thus identified which may have its traffic redirected in the event of its failure is referred to as a back-up enabled primary Network Interface, or referred to herein as simply the primary Network Interface. A Network Interface which is not enabled to work with a Back-Up, is referred to as a standard Network Interface.

A primary Network Interface may have only one Back-Up Network Interface identified. For Manual Back-Up Capability, a Back-up Network Interface may serve as the back-up for more than one primary Network Interface. For Automatic Back-Up Capability, a Back-up Network Interface may serve as the back-up for only one primary Network Interface.

EFFECTIVE: AUGUST 30, 2002

(M)

21.1 Exchange Access Frame Relay Service (XAFRS) (a.k.a. BellSouth Exchange Access Frame Relay Service)

(M)

(M)

21.1.1 General Description

(M)

Exchange Access Frame Relay Service (XAFRS) (a.k.a. BellSouth Exchange Access Frame Relay Service) is a connection oriented packet-switched data service allowing for the interconnection of local area networks (LANs) or other compatible customer equipment. This service provides efficient throughput at various transmission speeds.

(M)

(M)

(M)

(M)

(M)

XAFRS (a.k.a. BellSouth Exchange Access Frame Relay Service) allows for the transfer of variable length frames (packets). Frames are relayed by virtual connections; frames travel a fixed path through the network although bandwidth is not dedicated to each virtual connection.

(M)

(M)

(M)

(M)

This service uses permanent virtual circuits (PVCs). A PVC is a logical channel from one XAFRS (a.k.a. BellSouth Exchange Access Frame Relay Service) network interface to another XAFRS (a.k.a. BellSouth Exchange Access Frame Relay Service) network interface. PVCs are end-to-end, bi-directional channels that are established via the service provisioning process.

(M)

(M)

(M)

(M)

(M)

The XAFRS (a.k.a. BellSouth Exchange Access Frame Relay Service) standard specifies an address field called the Data Link Connection Identifier (DLCI). The DLCI specifies a connection. A Standard PVC is created via the mapping of two Standard DLCIs; on an optional basis, features are available to allow the creation of Priority PVCs and PVCs established via Frame Relay to ATM Network Interworking with an ATM Service network interface.

(M)

(M)

(M)

(M)

(M)

(M)

XAFRS (a.k.a. BellSouth Exchange Access Frame Relay Service) is comprised of a network interface component plus optional features. Connection to XAFRS (a.k.a. BellSouth Exchange Access Frame Relay Service) network interfaces may be accomplished through dedicated access. For interstate dedicated access, rates, charges, and regulations for Special Access (a.k.a. BellSouth SPA) Services are specified in Section 7 preceding. Only non-channelized bandwidth may terminate on an XAFRS (a.k.a. BellSouth Exchange Access Frame Relay Service) network interface.

21.0.1 Application Testing (Cont'd)

(N)

- D. The Telephone Company may extend the application testing period due to the (N)
following conditions: 1) Delay in provisioning of applicable test circuits (N)
due to circumstances beyond reasonable control (natural disasters, work (N)
stoppage, war, etc.), or 2) Technical problems encountered during the (N)
application testing period with either the Telephony Company or Customer (N)
equipment. (N)

EFFECTIVE: AUGUST 30, 2002

ACCESS SERVICE

21 - Fast Packet Access Services

21.0.1 Application Testing

The purpose of an application test is to determine the appropriateness of that specific service(s) for that specific application prior to the customer placing a firm order for such service(s). The Telephone Company will provide a limited amount of such service(s) subject to conditions specified in 21.0.1 A-21.0.1 D following. Such service is to be utilized in an initial application test with a customer for no longer than 90 days (unless otherwise stated in 21.0.1 D) from the date of installation. Application testing is available until December 31, 2003. The following services are eligible for application testing: Exchange Access Frame Relay Service, Managed Shared Frame Relay Service, Exchange Access Asynchronous Transfer Mode Service, and Managed Shared Asynchronous Transfer Service.

- A. Services to be provided in an application test are subject to the availability of facilities and equipment as determined by the Telephone Company. The Telephone Company makes no warranties with respect to the performance of certain services for any and all possible customer applications which may utilize these services.
- B. Application testing is available on a one time per application basis. Services that are utilized in an application test with a customer may be provided with credits for an application test period of up to 90 days. The maximum credits allowed will be \$10,600 total for monthly recurring charges and \$10,000 total for nonrecurring charges during the test period. Only customers whose current interstate monthly billing from this tariff is equal to or greater than \$500,000 are eligible to participate in Application Testing. Before Application Testing can begin, customers must execute an Application Testing Enrollment Form.
- C. Such service is provided for the specific purpose of conducting an application test with a customer and is not intended to be utilized as a substitute for temporary service.
 1. Upon completion of the application test where the customer determines that the performance of the services utilized are unacceptable for the application, the application test service will be removed without charge to the customer.
 2. Upon completion of the application test where the customer determines that the performance of the services utilized are acceptable for the application and no changes to the test service configuration are required, the customer will be billed the appropriate charges for the test service and monthly billing will begin at the time.¹
 3. Upon completion of the application test where the customer determines that the performance of the services utilized are acceptable for the application, however, the test service configuration must be changed, the customer shall be responsible for both the appropriate nonrecurring charges for the application test service plus all appropriate charges for the rearrangement of the service. Monthly billing shall begin for the rearranged service.¹

Note 1: Any additional service requested to be installed upon completion of the application test shall be subject to standard tariff nonrecurring charges and rates set forth in each service tariff.

ACCESS SERVICE

21 - Fast Packet Access Services

The Telephone Company will provide five types of Fast Packet Access Services: Exchange Access Frame Relay Service (XAFRS) (a.k.a. BellSouth Exchange Access Frame Relay Service) as described in Section 21.1 following, Exchange Access Connectionless Data Service (XACDS) (a.k.a. BellSouth Exchange Access Connectionless Data Service) as described in 21.2 following, BellSouth Exchange Access Asynchronous Transfer Mode Service (XAATMS) as described in 21.3 following, BellSouth Managed Shared Frame Relay Service (MSFRS) as described in 21.4 following and BellSouth Managed Shared Asynchronous Transfer Mode Service (MSATMS) as described in 21.5 following. Switch locations supporting Fast Packet Access Services are as specified in the National Exchange Carrier Association (N.E.C.A.) Tariff F.C.C. No. 4.

21.1 Exchange Access Frame Relay Service (XAFRS) (a.k.a. BellSouth Exchange Access Frame Relay Service)

21.1.1 General Description

Exchange Access Frame Relay Service (XAFRS) (a.k.a. BellSouth Exchange Access Frame Relay Service) is a connection oriented packet-switched data service allowing for the interconnection of local area networks (LANS) or other compatible customer equipment. This service provides efficient throughput at various transmission speeds.

XAFRS (a.k.a. BellSouth Exchange Access Frame Relay Service) allows for the transfer of variable length frames (packets). Frames are relayed by virtual connections; frames travel a fixed path through the network although bandwidth is not dedicated to each virtual connection.

This service uses permanent virtual circuits (PVCs). A PVC is a logical channel from one XAFRS (a.k.a. BellSouth Exchange Access Frame Relay Service) network interface to another XAFRS (a.k.a. BellSouth Exchange Access Frame Relay Service) network interface. PVCs are end-to-end, bi-directional channels that are established via the service provisioning process.

The XAFRS (a.k.a. BellSouth Exchange Access Frame Relay Service) standard specifies an address field called the Data Link Connection Identifier (DLCI). The DLCI specifies a connection. A Standard PVC is created via the mapping of two Standard DLCIs; on an optional basis, features are available to allow the creation of Priority PVCs and PVCs established via Frame Relay to ATM Network Interworking with an ATM Service network interface. 21.1 Exchange Access Frame Relay Service (XAFRS) (a.k.a. BellSouth Exchange Access Frame Relay Service)

21.1.1 General Description

Exchange Access Frame Relay Service (XAFRS) (a.k.a. BellSouth Exchange Access Frame Relay Service) is a connection oriented packet-switched data service allowing for the interconnection of local area networks (LANs) or other compatible customer equipment. This service provides efficient throughput at various transmission speeds.

XAFRS (a.k.a. BellSouth Exchange Access Frame Relay Service) allows for the transfer of variable length frames (packets). Frames are relayed by virtual connections; frames travel a fixed path through the network although bandwidth is not dedicated to each virtual connection.

This service uses permanent virtual circuits (PVCs). A PVC is a logical (T)
channel from one XAFRS (a.k.a. BellSouth Exchange Access Frame Relay Service)
network interface to another XAFRS (a.k.a. BellSouth Exchange Access Frame
Relay Service) network interface. PVCs are end-to-end, bi-directional
channels that are established via the service provisioning process.

The XAFRS (a.k.a. BellSouth Exchange Access Frame Relay Service) standard specifies an address field called the Data Link Connection Identifier (DLCI). The DLCI specifies a connection.

XAFRS (a.k.a. BellSouth Exchange Access Frame Relay Service) is comprised of a network interface component plus optional features. Connection to XAFRS (a.k.a. BellSouth Exchange Access Frame Relay Service) network interfaces may be accomplished through dedicated access. For interstate dedicated access, rates, charges, and regulations for Special Access (a.k.a. BellSouth SPA) Services are specified in Section 7 preceding. Only non-channelized bandwidth may terminate on an XAFRS (a.k.a. BellSouth Exchange Access Frame Relay Service) network interface.

ACCESS SERVICE

21 - Fast Packet Access Services

The Telephone Company will provide two types of Fast Packet Access Services: (XAFRS) (a.k.a. BellSouth Exchange Access Frame Relay Service) as described in Section 21.1 following and Exchange Access Connectionless Data Service (XACDS) (a.k.a. BellSouth Exchange Access Connectionless Data Service) as described in 21.2 following.

21.1 Exchange Access Frame Relay Service (XAFRS) (a.k.a. BellSouth Exchange Access Frame Relay Service)

21.1.1 General Description

Exchange Access Frame Relay Service (XAFRS) (a.k.a. BellSouth Exchange Access Frame Relay Service) is a connection oriented packet-switched data service allowing for the interconnection of local area networks (LANs) or other compatible customer equipment. This service provides efficient throughput at various transmission speeds.

XAFRS (a.k.a. BellSouth Exchange Access Frame Relay Service) allows for the transfer of variable length frames (packets). Frames are relayed by virtual connections; frames travel a fixed path through the network although bandwidth is not dedicated to each virtual connection.

This service uses permanent virtual circuit (PVCs). A PVC is a logical channel from one XAFRS (a.k.a. BellSouth Exchange Access Frame Relay Service) network interface to another XAFRS (a.k.a. BellSouth Exchange Access Frame Relay Service) network interface. PVCs are end-to-end, bidirectional channels that are established via the service provisioning process.

The XAFRS (a.k.a. BellSouth Exchange Access Frame Relay Service) standard specifies an address field called the Data Link Connection Identifier (DLCI). The DLCI specifies a connection.

XAFRS (a.k.a. BellSouth Exchange Access Frame Relay Service) is comprised of a network interface component plus optional features. Connection to XAFRS (a.k.a. BellSouth Exchange Access Frame Relay Service) network interfaces may be accomplished through dedicated access. For interstate dedicated access, rates, charges, and regulations for Special Access (a.k.a. BellSouth SPA) Services are specified in Section 7 preceding. Only non-channelized bandwidth may terminate on an XAFRS (a.k.a. BellSouth Exchange Access Frame Relay Service) network interface.

There are two network interfaces available - a user network interface (UNI) and a network-to-network interface (NNI).

The user network interface (UNI) is a standard interface used to connect the customer to the XAFRS (a.k.a. BellSouth Exchange Access Frame Relay Service) network. It receives the data frame from the customer's network or device and verifies that the DLCI is valid before relaying the frame to the destination. The UNI is offered at transmission speeds of 56 Kbps, 64 Kbps, 1.536 Mbps, and 44.210 Mbps. (T)

The network-to-network interface (NNI) specifies how an XAFRS (a.k.a. BellSouth Exchange Access Frame Relay Service) switch sends and receives data from another provider's Frame Relay switch. The NNI is offered at transmission speeds of 56 Kbps, 64 Kbps, 1.536 Mbps and 44.210 Mbps. (T)
